TRIBUNAL REGIONAL ELEITORAL DO PIAUÍ

Contrato Nº 101/2020

CONTRATO DE COMPRA, VENDA E PRESTAÇÃO DE GARANTIA, QUE ENTRE SI CELEBRAM O TRIBUNAL REGIONAL ELEITORAL DO PIAUÍ E A EMPRESA NOVA SERVIÇOS DE TECNOLOGIA DA INFORMAÇÃO E NETWORKING EIRELI.

A **UNIÃO FEDERAL**, por intermédio do **TRIBUNAL REGIONAL ELEITORAL DO PIAUÍ**, inscrito no Cadastro Nacional de Pessoas Jurídicas do Ministério da Fazenda sob o nº 05.957.363/0001-33, situado na Praça Des. Edgar Nogueira, S/N, em Teresina – PI, neste ato representado por seu Presidente em exercício, Des. ERIVA JOSÉ DA SILVA LOPES, inscrito no Cadastro de Pessoas Físicas do Ministério da Fazenda sob o nº 284.095.583-00, na sequência designado simplesmente **CONTRATANTE,** e a empresa **NOVA SERVIÇOS DE TECNOLOGIA DA INFORMAÇÃO E NETWORKING EIRELI**, inscrita no Cadastro Nacional de Pessoas Jurídicas do Ministério da Fazenda sob o nº 10.685.932/0001-79, estabelecida no endereço SCS Quadra 04 Bloco A Lote 219/237 1º Andar Parte O, Ed. Vera Cruz, CEP: 70.304-913, Brasília - DF, telefone: (61) 99411-7460, email: administrativo@grupoinovva.com.br, representada neste ato pela Sra. Marli Teresinha Erbe, inscrito no Cadastro Nacional de Pessoas Físicas do Ministério da Fazenda sob o nº 393.391.060-91, aqui designado simplesmente **CONTRATADA**, resolvem celebrar o presente **CONTRATO**, sob a forma de execução indireta, precedido pelo Procedimento Licitatório nº 74/2020, originado do Processo Eletrônico **SEI nº 0012283-09.2020.6.18.8000**, sendo certo que se regerá pelas condições e as cláusulas a seguir, bem como pelas disposições da Lei 8.666/93 e do instrumento convocatório do aludido Procedimento Licitatório.

CLÁUSULA PRIMEIRA – DO OBJETO

O presente instrumento tem por objeto a aquisição de atualização da solução de firewall do TRE-PI.

CLÁUSULA SEGUNDA – DOS QUANTITATIVO E ESPECIFICAÇÕES

O objeto contratado deverá ser fornecido conforme especificações, quantitativos e prazos determinados no Termo de Referência nº 26/2020, anexo a este instrumento.

CLÁUSULA TERCEIRA – DAS OBRIGAÇÕES DO CONTRATANTE E DA CONTRATADA

CONTRATANTE e CONTRATADA obrigam-se a cumprir o disposto nos itens 8 e 9 do Termo de Referência.

CLÁUSULA QUARTA – DO PREÇO E DO PAGAMENTO

O CONTRATANTE pagará à CONTRATADA o preço total de **R$ R$ 812.000,00 (oitocentos e doze mil reais),** referente aos itens discriminados na tabela abaixo, conforme estabelecido na proposta apresentada pela CONTRATADA quando da realização do procedimento licitatório:

ITEM	DESCRIÇÃO	QUANTITATIVO	VALOR UNITÁRIO	VALOR TOTAL
1	Atualização da Solução de Firewall tipo concentrador com atualização dos equipamentos existentes para, no mínimo, o SonicWall NSA 5650, com serviço de suporte 24X7 cobertos pela Garantia de 60 meses Fabricante: SonicWall / Modelo: NSA 5650 PN: 01-SSC-1939 / 01-SSC-3217 / 01-SSC-3678	1	R$ 295.000,00	R$ 295.000,00
2	Atualização da Solução de Firewall tipo pequeno porte com atualização dos equipamentos existentes para, no mínimo, o SonicWall SOHO 250 W, com serviço de suporte 8x5 cobertos pela Garantia de 60 meses Fabricante: SonicWall / Modelo: SOHO 250W PN: 02-SSC-1865 / 02-SSC-1760	47	R$ 5.700,00	R$ 267.900,00
3	Atualização da Solução de Firewall tipo pequeno porte com atualização dos equipamentos existentes para, no mínimo, o SonicWall SOHO 250 W, com serviço de suporte 8x5 cobertos pela Garantia de 60 meses Fabricante: SonicWall / Modelo: SOHO 250W PN: 02-SSC-1865 / 02-SSC-1760	13	R$ 5.700,00	R$ 74.100,00
4	Licença SonicWall Global Management System para até 70 nós por 03 anos Referências: a) 01 Licença 01-SSC-3311; b) 02 Licenças 01-SSC-7664; c) 01 Licença 01-SSC-3301; d) 02 Licenças 01-SSC-6532; e) 02 Licenças 01-SSC-6536. Fabricante: SonicWall / Modelo: GMS PN: 01-SSC-3311 / 01-SSC-7664 / 01-SSC-3301 / 01-SSC-6532 / 01-SSC-6536	1	R$ 175.000,00	R$ 175.000,00

PARÁGRAFO PRIMEIRO – O pagamento será efetuado até o 10º (décimo) dia útil contado da apresentação da NF, de acordo com o disposto no item 12 do Termo de Referência.

PARÁGRAFO SEGUNDO – Havendo erro na Nota Fiscal/Fatura ou circunstâncias que impeçam liquidação da despesa, aquela será devolvida e o pagamento ficará pendente até que a CONTRATADA providencie as medidas saneadoras. Nesta hipótese, o prazo para o pagamento iniciar-se-á, após a regularização da situação e/ou a reapresentação da Nota Fiscal/Fatura, não acarretando qualquer ônus para o CONTRATANTE.

PARÁGRAFO TERCEIRO – Nenhum pagamento será efetuado à CONTRATADA enquanto pendente de liquidação qualquer obrigação financeira e previdenciária, sem que isso gere direito a

reajustamento de preços, atualização monetária ou aplicação de penalidade ao TRE-PI. Também nenhum pagamento será efetuado à CONTRATADA se houver pendência no fornecimento de material ou equipamentos necessários à boa prestação dos serviços;

PARÁGRAFO QUARTO – Fica a CONTRATADA ciente que por ocasião do pagamento será verificada a sua situação perante o Fisco Federal.

CLÁUSULA QUINTA – DA DOTAÇÃO ORÇAMENTÁRIA

A despesa decorrente do presente pacto está prevista no Programa de Trabalho nº 02.122.0033.20GP.0022 – Julgamento de Causas e Gestão e Administração, sob Elementos de Despesa n° 3.3.90.40 – Serviços de Tecnologia da Informação e Comunicação, bem como 4.4.90.52 – Material Permanente.

CLÁUSULA SEXTA – DA VIGÊNCIA

O presente contrato vigerá pelo período de garantia dos itens contratados, qual seja 60 (sessenta) meses a contar do seu recebimento definitivo.

CLÁUSULA SÉTIMA – DO REAJUSTE

Os preços pactuados são fixos e irreajustáveis.

CLÁUSULA OITAVA – DA GESTÃO E FISCALIZAÇÃO

Gestão e fiscalização do contrato serão efetuadas por servidores nomeados mediante Portaria da Presidência, conforme disposto no item 10 do Termo de Referência.

CLÁUSULA NONA – DAS SANÇÕES ADMINISTRATIVAS

A CONTRATADA, além das penalidades previstas no art. 7º da Lei nº 10.520/202, ficará sujeita, ainda, às sanções administrativas insertas nos artigos 86 e 87 da Lei nº 8.666/93, a serem aplicadas pela autoridade competente do TRE-PI, conforme a gravidade do caso, assegurado o direito à ampla defesa e contraditório, sem prejuízo do ressarcimento dos danos porventura causados à Administração e das cabíveis cominações legais, conforme estipulado no item 13 do Termo de Referência.

PARÁGRAFO ÚNICO – Os atos lesivos praticados pela CONTRATADA serão objeto de apuração e, portanto, passíveis de responsabilização administrativa visando à aplicação das sanções previstas no art. 6º da Lei nº 12.846/2013, não afastando a possibilidade de sua responsabilização na esfera judicial.

CLÁUSULA DÉCIMA – DA RESCISÃO

O CONTRATANTE poderá rescindir unilateralmente o presente contrato nas hipóteses previstas no art. 78, inciso I a XII e XVII, da Lei no 8.666/93, sem que caiba à CONTRATADA direito a qualquer indenização, sem prejuízo das penalidades pertinentes.

PARÁGRAFO PRIMEIRO – O inadimplemento das cláusulas e condições estabelecidas neste Contrato por parte da CONTRATADA, assegurará ao CONTRATANTE o direito de dá-lo por rescindido, mediante notificação através de ofício entregue diretamente ou por via postal, com prova de recebimento, sem prejuízo do disposto na Cláusula Décima Terceira.

PARÁGRAFO SEGUNDO – O presente Contrato poderá, ainda, ser rescindido nas hipóteses do art. 78, incisos XIII a XVI, da Lei nº 8.666/93 e suas alterações, de forma amigável ou judicialmente.

PARÁGRAFO TERCEIRO – Em quaisquer das hipóteses será assegurada a ampla defesa e o contraditório.

CLÁUSULA DÉCIMA PRIMEIRA – DA ALTERAÇÃO

Este Contrato poderá ser alterado da ocorrência de quaisquer dos fatos estipulados no art. 65, da Lei nº 8.666/93.

CLÁUSULA DÉCIMA SEGUNDA – DAS CONDIÇÕES DE HABILITAÇÃO

A CONTRATADA tem obrigação de manter, durante toda a vigência contratual, em compatibilidade com as obrigações assumidas, todas as condições de habilitação e qualificação exigidas no

procedimento licitatório.

CLÁUSULA DÉCIMA TERCEIRA – DA CESSÃO OU TRANSFERÊNCIA

O presente instrumento não poderá ser objeto de cessão ou transferência, no todo ou em parte inclusive nos casos de cisão, incorporação ou fusão, no todo ou em parte, sem expressa anuência da CONTRATANTE.

CLÁUSULA DÉCIMA QUARTA – DOS CASOS OMISSOS

Os casos omissos do presente instrumento serão dirimidos com aplicação da Lei nº 8.666/93 e suas alterações, bem como de legislação extravagante aplicável ao caso e dos princípios gerais do Direito Público.

CLÁUSULA DÉCIMA QUINTA – DO FORO

Para dirimir questões derivadas deste Contrato, fica nomeado o foro da Seção Judiciária da Justiça Federal desta Capital, excluído qualquer outro, por mais privilegiado que seja.

CLÁUSULA DÉCIMA SEXTA – DA PUBLICAÇÃO

Incumbirá ao CONTRATANTE providenciar a publicação deste instrumento, por extrato, no Diário Oficial da União, no prazo previsto na Lei nº 8.666/93.

CLÁUSULA DÉCIMA SÉTIMA – DA DOCUMENTAÇÃO COMPLEMENTAR

É parte integrante deste instrumento contratual, independentemente de transcrição, o Edital do Procedimento Licitatório nº 74/2020 – Pregão Eletrônico e seus anexos, sendo incorporadas a este contrato todas as obrigações definidas no referido instrumento.

E por estar acordado, depois de lido foi o presente contrato lavrado e assinado no Sistema Eletrônico de Informações do TRE-PI pelas partes abaixo:

TRIBUNAL REGIONAL ELEITORAL DO PIAUÍ
Des. ERIVAN JOSÉ DA SILVA LOPES
Presidente, em exercício

0025388-53.2020.6.18.8000 1138825v4

TRIBUNAL REGIONAL ELEITORAL DO PIAUÍ

Termo de Referência Nº 26/2020-COM INCLUSÃO DA PARTICIPAÇÃO DO IFMT

1. OBJETO

1.1 Registro de preços para eventual atualização da solução de firewall do Tribunal Regional Eleitoral do Piauí, conforme condições, quantidades e exigências estabelecidas neste Edital.

2. JUSTIFICATIVA DA CONTRATAÇÃO

2.1 O elevado grau de automação dos processos operacionais e administrativos tem levado as organizações a confiar e depender cada vez mais de sua infraestrutura tecnológica para viabilizar aplicações de missão crítica. Além disso, a capacidade de implementar rapidamente novas soluções que aumentem a agilidade, a capacidade de adaptação, a otimização de custos e a melhoria dos serviços prestados de forma continuada aos seus clientes e usuários tem sido pontos bastante relevantes na busca pela evolução tecnológica.

2.2 Um dos recursos tecnológicos que possibilita essa evolução é o firewall. Uma solução de firewall para uma rede de computadores consiste em filtros que controlam as conexões e comunicações que trafegam de uma rede para outra, cujos filtros possuem a ação de permitir ou negar o acesso entre elas. Com o bloqueio de tráfegos indesejados, evita-se a ocorrência de ataques e tráfego malicioso nas redes protegidas pela solução.

2.3 Entre os vários recursos que o firewall nos permite implementar, podemos citar: ajuda a impedir que a rede, servidores e ativos sejam acessados sem autorização; evita que informações sejam capturadas; bloqueio de programas indesejados na rede como compartilhamento de dados e de mensagens instantâneas; fechamento de portas não utilizadas a fim de evitar abusos na utilização da Internet; permite auditoria nos acessos a recursos da rede; permite a limitação de banda por serviços e monitoramentos dos links de dados que passam por ele.

2.4 Objetivando alcançar esses benefícios, o TRE-PI investiu recursos e esforços para adquirir uma solução de firewall que provesse incremento no seu nível de segurança da informação e permitisse comunicação segura entre a Sede e os cartórios do interior do Estado com o uso de recursos criptográficos e túneis VPN (*Virtual Private Network* – Rede Virtual Privada).

2.5 Além de possibilitar a criação de uma rede de comunicação segura através de links de Internet, essa solução permitiu a criação da infraestrutura necessária para utilização da solução JE-Connect, amplamente utilizada durante os pleitos eleitorais para o envio dos resultados das eleições e atendimentos descentralizados das diversas zonas eleitorais, otimizando o atendimento ao eleitor.

2.6 No entanto, como acontece com qualquer solução tecnológica, existe um processo de obsolescência natural, não somente em decorrência do tempo de uso, mas também pelo advento de novas tecnologias e formas de garantir a continuidade dos serviços de TI diante das ameaças existentes.

2.7 Soma-se a isso, o fato de que o Tribunal segue ampliando a utilização de links de comunicação com a Internet que utilizarão esses equipamentos de forma contínua para efetivar a comunicação dos cartórios eleitorais com a Sede do Tribunal e utilização dos Sistemas Eleitorais, fazendo-se necessária a expansão

da solução de segurança. Assim, com a iniciativa de expandir a solução atual de VPN, permitindo a substituição de alguns equipamentos já obsoletos e garantindo plena integração, interoperabilidade e gerenciamento de todos componentes, gerando riscos mínimos para a administração no uso do parque tecnológico de segurança da informação do TRE-PI, faz-se necessária a modernização da solução de firewall atualmente utilizada.

2.8 Em 2013, o TRE-PI adquiriu solução de firewall formada por 04 unidades do Firewall **SonicWall NSA 5600** e 25 (vinte e cinco) unidades do firewall **SonicWall TZ 205W**. O *cluster* ativo formado pelos equipamentos SonicWall NSA 5600 possui licença válida de suporte e atualização de seus requisitos de segurança até **janeiro de 2021**, sendo possível a renovação da garantia dos requisitos de segurança e de suporte pelo fabricante por mais 05 anos, procedimento de suma importância para manter a segurança dos equipamentos e realizar a correção de defeitos.

2.9 Por sua vez, o segundo modelo, normalmente instalado nos cartórios e postos de atendimento e utilizado para estabelecer comunicação segura com a Sede através de túneis VPN, está com seu ciclo de vida e suporte encerrados pelo fabricante.

2.10 Posteriormente, em 2016, este Regional adquiriu 24 (vinte e quatro) unidades do firewall de pequeno porte **SonicWall SOHO W** (processo PAD nº 3845/2016). O fabricante garante atualização e suporte a este modelo até 2025. No entanto, devido lapso temporal transcorrido desde o fim de seu suporte, chegou-se à conclusão de quê não compensa dispensar esforços para renovar a garantia dos requisitos de segurança e de suporte apenas dessas unidades e realizar outro procedimento licitatório para aquisição dos equipamentos restantes.

2.11 Diante deste cenário, os Estudos Técnicos Preliminares apontaram como melhor opção o Registro de Preços para contratação de atualização da solução de firewall com upgrade dos equipamentos existentes (SonicWall NSA 5600, TZ 205 W e SOHO W) para no mínimo o Firewall SonicWall NSA 5650 e SOHO 250 Wireless.

2.12 A modalidade de contratação apontada como melhor opção nos estudos técnicos realizados atrela à contratação a substituição dos atuais equipamentos por outros novos, com melhor capacidade de processamento e performance, em uma relação custo x benefício vantajosa para o Tribunal. Esta modalidade é conhecida como *Trade-up*.

2.13 Essa modalidade pretendida é ofertada por alguns fabricantes de solução de segurança (como a própria SonicWall) e trará as seguintes vantagens para o Tribunal:

2.13.1 menor custo de investimento;
2.13.2 facilidade e menor tempo na migração de toda solução de segurança para a nova plataforma de equipamentos devido a compatibilidade;
2.13.3 aproveitamento da expertise da equipe da Seção de Infraestrutura pela continuação da mesma tecnologia e estrutura de implementação da solução;
2.13.4 possibilidade de utilização dos firewall de pequeno porte até que todos sejam substituídos;
2.13.5 possibilidade de aquisição do software de gerenciamento centralizado com recursos poupados graças ao item 1;
2.13.6 padronização dos ativos de segurança.

3. DESCRIÇÃO DA SOLUÇÃO

3.1 Registro de preços para eventual atualização da solução de firewall do Tribunal Regional Eleitoral do Piauí, conforme condições, quantidades e exigências estabelecidas neste Edital.

ITEM	DESCRIÇÃO	QUANTIDADE REGISTRADA	DEMANDA INICIAL	PREÇO UNITÁRIO MÁXIMO ACEITÁVEL
1	Atualização da Solução de Firewall tipo concentrador com atualização dos equipamentos existentes para no mínimo o SonicWall NSA 5650, com serviço de suporte 24X7 cobertos pela Garantia de 60 meses Referências:**01-SSC-1939 / 01-SSC-3217 / 01-SSC-3678**	2	1	R$ 305.264,51
2	Atualização da Solução de Firewall tipo pequeno porte com atualização dos equipamentos existentes para no mínimo o SonicWall SOHO 250 W, com serviço de suporte 8x5 cobertos pela Garantia de 60 meses Referências: **02-SCC-1865 / 02-SCC-1760**	51	-	R$ 5.837,36
3	Atualização da Solução de Firewall tipo pequeno porte com atualização dos equipamentos existentes para no mínimo o SonicWall SOHO 250 W, com serviço de suporte 8x5 cobertos pela Garantia de 60 meses Referências: **02-SCC-1865 / 02-SCC-1760** COTA EXCLUSIVA PARA ME/EPP DO ITEM 2, (CONFORME ART. 48, III, DA LEI COMPLEMENTAR Nº 123/2006)	17	17*	R$ 5.837,36
4	Licença SonicWall Global Management System para até 70 nós	1	-	R$ 196.597,39

	por 03 anos Referências: a) 01 Licença **01-SSC-3311**; b) 02 Licenças **01-SSC-7664**; c) 01 Licença **01-SSC-3301**: d) 02 Licenças **01-SSC-6532**; e) 02 Licenças **01-SSC-6536**.			

* Prioridade de aquisição do item 3 em relação ao item 2, conforme § 4º, do art. 8º do **DECRETO Nº 8.538, DE 6 DE OUTUBRO DE 2015**: *"Nas licitações por Sistema de Registro de Preço ou por entregas parceladas, o instrumento convocatório deverá prever a prioridade de aquisição dos produtos das cotas reservadas, ressalvados os casos em que a cota reservada for inadequada para atender as quantidades ou as condições do pedido, justificadamente."*

3.2. Padronização dos equipamentos:

Conforme consta dos **Estudos Técnicos 45** (**SEI nº 1050655**), o TRE-PI utiliza em sua infraestrutura solução de firewall dos fabricantes **SonicWall** e **CheckPoint**, sendo que este último é de propriedade do Tribunal Superior Eleitoral.

Sendo necessária a renovação da solução de firewall utilizada, ficou evidente nos estudos empreendidos que a proposta com **melhor custo/benefício** foi apresentada pelo fabricante SonicWall.

Primeiro, a *expertise* adquirida nos equipamentos do fabricante SonicWall não será perdida e permitirá que ocorra um **menor impacto** na migração para a nova solução.

Segundo, as propostas e contratos colhidos evidenciaram que a opção financeiramente mais viável é pela continuidade do uso dos equipamentos SonicWall, Além de não haver necessidade de treinamentos para a implantação/utilização dos equipamentos, o Tribunal poderá fazer uso do procedimento conhecido como "*trade up*", que consiste em vantagens financeiras oferecidas pelo fabricante para que seus equipamentos sejam substituídos por outros mais novos.

Terceiro, e o mais importante, a padronização dos equipamentos permitirá ao Tribunal a utilização dos **equipamentos antigos e novos em conjunto** até que aqueles sejam totalmente substituídos, uma vez que o valor previsto em orçamento não permitirá realizar a substituição de todos os equipamentos existentes.

O próprio TCU prevê a indicação de marca quando necessária para atender exigências de padronização (Súmula TCU nº 270).

4. ESPECIFICAÇÕES GERAIS

4.1 A Atualização da solução de Firewall do Tribunal consiste no seguinte:

4.1.1 Atualização dos atuais equipamentos por meio de Substituição por outros superiores, conforme descrito neste Termo de Referência;

4.1.2 Fornecimento de serviços de suporte técnico para solução de eventuais problemas de funcionamento dos equipamentos dos firewalls pelo período de Garantia contratado, incluindo substituições de hardwares

quando necessário durante a vigência da Garantia;

4.1.3 Fornecimento, ativação e manutenção dos requisitos de segurança nos firewalls, conforme descritos neste Termo de Referência, pelo período
de Garantia contratado;

4.1.4 Diante dos procedimentos legais para desfazimento de Patrimônios Públicos a Contratada ao concordar em participar do Certame, tacitamente já concorda que os equipamentos substituídos serão oportunamente incluídos ao processo administrativo de desfazimento de bens, o que impedirá de retirá-los do Tribunal em ato contínuo à implantação da solução contratada;

4.1.5 Fornecimento dos Serviços de instalação dos novos equipamentos, configuração, migração de todos os objetos e regras de firewall, configuração de VPNs entre firewall concentrador e firewalls de pequeno porte, enfim, todos os serviços para a efetiva migração da solução de firewall do Tribunal até alcançar plena estabilidade operacional;

4.1.6 A retirada dos atuais equipamentos do modo operacional se dará somente com a efetiva instalação e estabilização dos serviços ativos nos novos equipamentos;

4.1.7 A substituição deverá ser por equipamentos novos, podendo ser da mesma família de produção, porém, de modelos superiores, de lançamento no mercado em data mais recente dos atuais equipamentos;

4.1.8 Os novos equipamentos deverão estar em linha de produção quando da entrega dos equipamentos para fins de substituição;

4.1.9 Deverá possuir recursos técnicos e desempenho de processamento equivalente ou superior aos atuais equipamentos;

4.1.10 Na tabela a seguir consta os modelos dos atuais equipamentos, bem como os modelos de referência mínimo aceitável, em termos de performance e capacidade de processamento, para fins de substituição:

Item	Modelo atual de equipamento	Modelo mínimo aceitável como referência técnica para novos equipamentos
1	SonicWall NSA 5600	SonicWall NSA 5650
2	SonicWall TZ 205	SonicWall SOHO 250 Wireless
3	SonicWall TZ 205	SonicWall SOHO 250 Wireless
3	SonicWall SOHO	SonicWall SOHO 250 Wireless

4.2 Especificações dos serviços de suporte e dos requisitos de segurança a serem fornecidos na Atualização da solução de Firewall, tipo Concentrador, e mantidos durante a vigência da Garantia Contratada.

4.2.1 A Contratada deverá fornecer os requisitos de segurança e mantê-los devidamente ativos e atualizados, bem como os serviços de suporte, durante o período coberto pela garantia da Solução de Firewall, que será de 60 Meses, compreendendo, no mínimo, nos seguintes:

a) Antivírus e antispyware;

b) Prevenção contra intrusão;

c) Controle de aplicações (application control);

d) Filtragem de conteúdo;

e) Capture advanced threat protection;

f) Serviço de suporte técnico na modalidade de 24x7 (24 horas/dia e 7 dias/semana).

4.2.2 O Fornecimento desse requisitos integrantes da Solução de Firewall implicará na prestação continuada coberta pela garantia do fabricante, atualizações de firmware, ativação completa para todas as funcionalidades de segurança descrita neste Termo de Referência, incluindo atualização dinâmica de antivírus, filtros de conteúdo WEB e demais recursos de segurança que requeiram atualização frequente;

4.2.3 A manutenção desses requisitos deve prover a atualização automática e em tempo real dos filtros de conteúdo WEB, através da categorização contínua de novos sites da internet, dos mecanismos de prevenção a intrusão e recursos de segurança contra novos vírus, spywares, vulnerabilidades de softwares e códigos maliciosos;

4.2.4 As atualizações e upgrades de software e firmware devem ser disponibilizadas à CONTRATANTE para download no site da CONTRATADA ou do fabricante.

4.3 A CONTRATADA será responsável por todo o processo de ativação dos requisitos de segurança integrantes da solução de firewall, bem como nas demandas de atualização de todos os hardwares contratados, dentre eles: gerar e fornecer os arquivos necessários, executar a renovação/atualização no portal de gerência do fabricante para todos os firewalls, e demais demandas que forem necessárias.

5. REQUISITOS DE NEGÓCIO

5.1 REQUISITOS DE CAPACITAÇÃO

5.1.1 A CONTRATADA deverá fornecer, sem custo adicional, 04 (quatro) *vouchers* para treinamento presencial oficial do fabricante com carga horária mínima de 24 horas/aula.

5.1.2 O curso a ser disponibilizado deverá pertencer ao catálogo de treinamento oficiais do fabricante.

5.1.3 Deverá abordar informações necessárias à gerência, administração e suporte interno da solução.

5.1.4 Deverá disponibilizar material didático oficial para cada treinando.

5.2. REQUISITOS LEGAIS

5.2 Devem-se observar as normas:

- Lei n° 8.666, de 21 de junho de 1993, que institui normas para licitações e contratos da Administração Pública.
- Decreto n° 7.174, de 12 de maio de 2010, que regulamenta a contratação de bens e serviços de informática e automação pela administração pública federal e faz exigência contratual de comprovação da origem dos bens importados oferecidos pelos licitantes e da quitação dos tributos de importação a eles referentes, que deve ser apresentada no momento da entrega do objeto, sob pena de rescisão contratual e multa.
- Resolução CNJ nº 182 de 17 de outubro de 2013, que dispõe sobre diretrizes para as contratações de Solução de Tecnologia da Informação e Comunicação pelos órgãos submetidos ao controle administrativo e financeiro do Conselho Nacional de Justiça (CNJ).

- Resolução TSE nº 23.234, de 15 de abril de 2010, que dispõe sobre regras e diretrizes para a contratação de serviços no âmbito da Justiça Eleitoral.
- Orientação Técnica n° 01 TiControle, de 12 de março de 2008, que dispõe sobre boas práticas para a estimativa de preços na contratação de bens e serviços de TI.
- Resolução TRE-PI nº 356/2017, de 19 de dezembro de 2017, que estabelece a Política de Segurança da Informação (PSI) do Tribunal Regional Eleitoral do Piauí.
- Lei nº 10.520/2002; Decretos nºs 10.024/2019 e 7.892/2013 e demais normas pertinentes.
- Instrução Normativa nº 5, de 27 de Junho de 2014.

5.3 REQUISITOS DE MANUTENÇÃO

5.3.1 A manutenção em garantia poderá ser realizada pelo fabricante, porém, sendo responsabilidade subsidiaria da CONTRATADA.

5.3.2 A CONTRATADA deverá informar o número do chamado e disponibilizar um meio de acompanhamento do seu estado.

5.3.3 A manutenção deverá cobrir todas as peças e componentes mecânicos e eletrônicos substituídos, decorrentes de manutenção corretiva, deverá apresentar padrões de qualidade e desempenho iguais ou superiores aos utilizados na fabricação do equipamento, sendo sempre novos e de primeiro uso, durante todo o período de garantia técnica.

5.3.4 O serviço de suporte técnico à solução fornecida e implementada se destina a correção de problemas e esclarecimento de dúvidas sobre configuração e utilização da solução ofertada.

5.3.5 Os serviços serão na modalidade de 24x7 (24 horas/dia e 7 dias/semana) e serão solicitados pela equipe técnica do Tribunal mediante abertura de chamado junto à CONTRATADA, via chamada telefônica local ou gratuita, e-mail ou sítio web.

5.3.6 Os serviços deverão contemplar a prestação continuada de serviços de garantia do fabricante, atualizações de firmware, ativação completa para todas as funcionalidades de segurança descrita no Termo de Referência, incluindo atualização dinâmica de antivírus, filtros de conteúdo WEB e demais recursos de segurança que requeiram atualização frequente.

5.3.7 Deverá ainda contemplar a atualização automática e em tempo real dos filtros de conteúdo WEB, através da categorização contínua de novos sites da internet, dos mecanismos de prevenção a intrusão e recursos de segurança contra novos vírus, spywares, vulnerabilidades de softwares e códigos maliciosos.

5.3.8 As atualizações e upgrades de software e firmware devem ser disponibilizadas à CONTRATANTE para download no site da CONTRATADA ou do fabricante

5.3.9 O serviço de suporte técnico pelo período contratado deverá ser prestado através do acionamento da CONTRATADA, para atendimento das necessidades de informação e restabelecimento de funcionalidades nas condições e prazos a seguir:

- Para correção de funcionalidade impactada e que não impede a continuidade da maior parte dos negócios, será considerada como de SEVERIDADE BAIXA: Prazo máximo para resolução: 48 horas;
- Para solicitação de informações sobre os produtos, incluindo configuração e instalação, será considerada de SEVERIDADE BAIXA: Prazo máximo para resolução: 36 horas;
- Para problemas que causem impactos significativos nos negócios incluindo degradação de desempenho, serão considerados como de SEVERIDADE MÉDIA: Prazo máximo para resolução: 24 horas;
- Para situações em que os serviços se encontrem indisponíveis, serão consideradas como de SEVERIDADE ALTA: Prazo máximo para resolução:8 horas. Havendo necessidade de substituição de equipamentos o prazo de resolução do problema será no máximo de 24 horas.

5.3.10 Ocorrendo problemas técnicos ou físicos com os equipamentos cuja recuperação ao status operacional fique prejudicada, durante a vigência contratual, a contratada deverá substituir os equipamentos envolvidos.

5.3.11 Os serviços de suporte técnico deverão ser de responsabilidade da Contratada, podendo ser prestado pela central de suporte técnico especializado do fabricante dos equipamentos. No caso dos serviços serem prestados pela Contratada, deverá apresentar comprovação da existência de equipe técnica disponível para atendimento das demandas e respectiva qualificações/certificações técnicas junto ao Fabricante

5.4 REQUISITO TEMPORAL

5.4.1 Considerando possíveis dificuldades na logística de entrega ocasionadas pela pandemia provocada pela COVID-19, o prazo máximo para entrega dos produtos/equipamentos deverá ser de 45 (quarenta e cinco) dias corridos, contados a partir do recebimento, pela Contratada, da ordem de fornecimento.

5.5 REQUISITOS DE SEGURANÇA DA INFORMAÇÃO

5.5.1 A CONTRATADA se obriga a conhecer e observar a Política de Segurança da Informação do TRE.

5.5.2 A CONTRATADA deverá guardar sigilo sobre dados e informações obtidos em razão da execução dos serviços contratados ou da relação contratual mantida com o TRE-PI, abstendo-se de divulgá-los a terceiros sob qualquer pretexto, a menos que prévia e formalmente autorizado pelo TRE-PI.

5.5.3 A solução deverá proporcionar a disponibilidade, a integridade e a segurança de todas as informações do TRE-PI por ela gerenciadas e armazenadas

5.5.4 Os dispositivos de armazenamento substituídos em função de troca em garantia, ou ficarão retidos na Contratante até seu pagamento, ou somente serão devolvidos após sua inutilização completa.

5.5.5 A devolução do componente inutilizado ou desmagnetizado ficará a critério exclusivo da CONTRATANTE, sem gerar direitos à CONTRATADA.

5.5.6 A CONTRATADA não poderá armazenar consigo qualquer documento técnico que contemple configurações e regras de segurança aplicadas nos equipamentos implantados na rede da CONTRATANTE.

5.5.7 A CONTRATADA responderá solidariamente com seus agentes empregados, prepostos, ou subcontratados, no caso de violação do compromisso de confidencialidade ora assumido.

5.5.8 O TRE-PI terá propriedade sobre todos os documentos e procedimentos operacionais produzidos no escopo da presente contratação.

5.5.9 Os equipamentos que vierem a ser substituídos deverão, sempre que possível, ter suas configurações apagadas.

5.6 REQUISITOS SOCIAIS, AMBIENTAIS E CULTURAIS

5.6.1 Os materiais, objetos deste Termo deverão seguir, no que couberem, a Instrução Normativa n° 1 de 19 de janeiro de 2010 do Ministério do Planejamento, Orçamento e Gestão e Decreto 7.746/2012), seguindo os seguintes critérios de sustentabilidade ambiental:

a) Os materiais deverão ser, preferencialmente, acondicionados em embalagem individual adequada, preferencialmente a base de papel, com o menor volume possível, que utilize materiais recicláveis, de forma a garantir a máxima proteção durante o transporte e o armazenamento.
b) Não serão aceitos, em hipótese alguma, fardos, caixas ou frascos violados ou com outros danos que prejudiquem o acondicionamento e a qualidade do produto ou que causem vazamento e os lacres e selos

de segurança das embalagens e frascos deverão estar de acordo com as normas pertinentes, inclusive contendo informações quanto as suas características na embalagem.
c) O materiais não poderão conter substâncias perigosas em concentração acima da recomendada na diretiva RoHS (Restriction of Certain Hazardous Substances), tais como mercúrio (Hg), chumbo (Pb), cromo hexavalente (Cr(VI)), cádmio (Cd), bifenil-polibromados (PBBs), éteres difenilpolibromados (PBDEs).

5.6.2 Os equipamentos novos e de primeiro uso, deverão ser entregues em perfeito estado de funcionamento, sem marcas, amassados, arranhões ou outros problemas físicos;

5.6.3 Os manuais devem estar em língua inglesa e/ou portuguesa. Os manuais poderão ser entregues em meio digital ou disponibilizados para *download*.

5.7 REQUISITOS DA ARQUITETURA TECNOLÓGICA

5.7.1 Previstos no Item 3. Descrição da Solução.

5.8 REQUISITOS DO PROJETO DE IMPLANTAÇÃO DA SOLUÇÃO DE TI

5.8.1 A CONTRATADA deverá fornecer o conjunto de manuais técnicos oficiais, elaborados pelo fabricante de cada equipamento, contendo todas as informações sobre o produto como instruções para instalação, configuração, operação e gerenciamento.

5.8.2 Os manuais técnicos do fabricante devem estar escritos em português e/ou inglês, e podem ser fornecidos em mídia digital (CD-ROM, DVD, PDF) ou disponibilizados para *download*.

5.9 REQUISITOS DA GARANTIA E MANUTENÇÃO

5.9.1 A empresa fornecedora do equipamento/serviços deverá:

a) Garantir os equipamentos e serviços (suporte) pelo período mínimo de 60 (sessenta) meses diretamente com o fabricante do equipamento, contados a partir da data de emissão do Termo de Recebimento Definitivo;
b) Prover assistência técnica no território brasileiro;
c) Dispor de um número telefônico para suporte técnico e abertura de chamados técnicos, disponíveis 24 horas por dia e 7 dias por semana, inclusive feriados;
d) possuir um sistema de atendimento de suporte via Chat, 0800, email ou através da Internet.

6. DO VALOR ESTIMADO PARA A CONTRATAÇÃO

6.1 A presente aquisição possui o valor estimado de **R$ 1.204.066,89 (um milhão, duzentos e quatro mil sessenta e seis reais e oitenta e nove centavos)** , conforme Análise de Viabilidade de documento SEI nº 1028711 e **considerando também a participação do Instituto Federal de Educação, Ciência e Tecnologia - MT, Campos Juina, para o item 1.**

7. ENTREGA E CRITÉRIOS DE ACEITAÇÃO DO OBJETO

7.1 Prazo máximo de **45 (quarenta e cinco) dias corridos** para entrega dos produtos/equipamentos, contados a partir do recebimento, pela CONTRATADA, da ordem de fornecimento, que será recebido da seguinte forma:

7.2 Provisoriamente, pela Seção de Almoxarifado e Patrimônio, para efeito de posterior verificação de

sua conformidade com as especificações constantes neste Termo de Referência e com a proposta.

7.3 O local de entrega é a Seção de Almoxarifado e Patrimônio (SEALP) do Tribunal Regional Eleitoral do Piauí, localizada na Praça Des. Edgard Nogueira, s/n, Bairro: Cabral, Prédio Sede, em Teresina-PI, CEP: 64.000-920, no horário de 07:00 às 14:00 horas, ou previamente agendado;

> 7.3.1. l**ocal de entrega do item 1 para o órgão participante do registro de preços - Instituto Federal de Educação, Ciência e Tecnologia - MT Campus Juina: Linha J, Quadra 8, Setor Chácara, Caixa Postal 255, Juina, Mato Grosso. CEP: 78.320-000**

7.4 Definitivamente, se não houver desconformidades, em **até 10 dias úteis** da emissão do recebimento provisório, a ser realizado por Comissão Técnica formada por servidores da Secretaria de Tecnologia da Informação do TRE-PI, após verificação da conformidade dos serviços e equipamentos com as disposições deste Termo de Referência, com a proposta da contratada e Manual do Fabricante.

7.5 A existência de desconformidades caracteriza a execução irregular do objeto e implicará a recusa do seu recebimento definitivo, que será fundamentada e circunstanciada pelo Contratante, suspendendo-se o prazo de pagamento até que a Contratada promova as regularizações devidas, nos termos previstos neste termo e no artigo 69 da Lei nº 8666/1993;

7.6 Os materiais que por ventura forem rejeitados, quando em desacordo com as especificações, e com a proposta apresentada, deverão ser substituídos no prazo de **até 10 (dez) dias úteis**, a contar da notificação da licitante vencedora;

7.7 Ocorrendo nova entrega ou a reapresentação de documentos e informações indispensáveis para o recebimento, o prazo para emissão dos termos provisório e definitivo iniciar-se-ão novamente.

7.8 Caberá à licitante vencedora o ônus financeiro da substituição, sem prejuízo da aplicação das penalidades.

7.9 O recebimento provisório ou definitivo não exclui a responsabilidade civil pelos serviços executados.

8. DAS OBRIGAÇÕES DO CONTRATANTE

8.1. Prestar informações e esclarecimentos que venham a ser solicitados pela CONTRATADA, necessários à execução do contratado;

8.2. Notificar a Contratada por escrito da ocorrência de eventuais imperfeições dos equipamentos, fixando prazo para a sua correção de acordo com os definidos no presente Termo;

8.3. Verificar se os equipamentos estão de acordo com as especificações, podendo sustar, recusar, mandar fazer ou desfazer qualquer serviço que esteja em desacordo com as especificações deste documento;

8.4. Atestar a(s) notas fiscal(ais) apresentada(s) pela CONTRATADA após o recebimento definitivo dos equipamentos, conforme especificações descritas neste Termo de Referência;

8.5. Efetuar o pagamento nas condições, preços e prazos pactuados;

8.6. Acompanhar e fiscalizar o cumprimento das obrigações da contratada, determinando o que for necessário a regularização das falhas ou defeitos observados, ou ainda propor aplicações de penalidades e a sanções administrativas regulamentares e contratuais cabíveis, sempre que for o caso.

9. DAS OBRIGAÇÕES DA CONTRATADA

9.1. A Contratada deve cumprir todas as obrigações constantes no Edital, seus anexos e sua proposta,

assumindo como exclusivamente seus os riscos e as despesas decorrentes da boa e perfeita execução do objeto e, ainda:

9.1.1. Efetuar a entrega do objeto em perfeitas condições, conforme especificações, prazo e local constantes no Edital e seus anexos.

9.1.2. Reparar, corrigir, remover, reconstruir ou substituir, às suas expensas, as partes do objeto deste contrato em que se verificarem vícios, defeitos ou incorreções resultantes dos materiais empregados.

9.3.Deverá guardar sigilo sobre dados e informações obtidos em razão da execução dos serviços contratados ou da relação contratual mantida com o TRE-PI, abstendo-se de divulgá-los a terceiros sob qualquer pretexto, a menos que prévia e formalmente autorizado pelo TRE-PI.

9.1.4. Responsabilizar-se pelos vícios e danos decorrentes da execução do objeto, de acordo com os artigos 14 e 17 a 27, do Código de Defesa do Consumidor (Lei nº 8.078, de 1990), ficando a Contratante autorizada a descontar dos pagamentos devidos à Contratada, o valor correspondente aos danos sofridos;

9.2. A CONTRATADA deverá respeitar as normas de segurança estabelecidas pela CONTRATANTE durante a realização de atividades no ambiente desta.

9.3. A CONTRATADA deverá:

a) prover assistência técnica no **território** brasileiro;

b) dispor de um número telefônico para suporte técnico e abertura de chamados técnicos,

c) apresentar tempo de resposta aos chamados abertos em até no máximo 6 horas;

d) possuir um sistema de atendimento de suporte via Chat, 0800 ou através da Internet;

e) dar garantia não inferior a 60 meses, a contar da data de emissão do Termo de Recebimento Definitivo;

9.4. Manter, durante toda a execução do contrato, em compatibilidade com as obrigações assumidas, todas as condições de habilitação e qualificação exigidas na licitação;

10. CONTROLE E FISCALIZAÇÃO

10.1. Nos termos do art. 67 Lei nº 8.666, de 1993, será designado representante para acompanhar e fiscalizar a entrega dos bens, anotando em registro próprio todas as ocorrências relacionadas com a execução e determinando o que for necessário à regularização de falhas ou defeitos observados.

10.1.1. A minuta da portaria da Comissão Especial de Recebimento dos bens/serviços, consta do Anexo I deste Termo de Referência.

10.2. A fiscalização de que trata este item não exclui nem reduz a responsabilidade da Contratada, inclusive perante terceiros, por qualquer irregularidade, ainda que resultante de imperfeições técnicas ou vícios redibitórios, e, na ocorrência desta, não implica em corresponsabilidade da Administração ou de seus agentes e prepostos, de conformidade com o art. 70 da Lei nº 8.666, de 1993.

11. DA SUBCONTRATAÇÃO

11.1 Não será admitida a subcontratação do objeto licitatório.

12. PAGAMENTO

12.1. O pagamento será efetuado pela Coordenadoria de Orçamento e Finanças deste TRE-PI, mediante depósito bancário em conta corrente da empresa contratada, por intermédio de Ordem Bancária, após a comprovação do recebimento definitivo dos bens adquiridos e instalados.

12.2. O prazo máximo para a efetivação do pagamento será de 10 (dez) dias úteis, após a entrega dos bens e com a entrega da respectiva Nota Fiscal, devidamente conferida e atestada por servidor designado pelo TRE-PI, observada a ordem cronológica de apresentação.

12.3. Nos casos de eventuais atrasos de pagamento provocados exclusivamente pela Administração, o valor devido deverá ser acrescido de atualização financeira, e sua apuração se fará desde a data de seu vencimento até a data do efetivo pagamento, em que os juros de mora serão calculados à taxa de 0,5% (meio por cento) ao mês, ou 6% (seis por cento) ao ano, mediante aplicação das seguintes formulas:

I = (TX/100) / 365

EM = I x N x VP

Onde:

I = Índice de atualização financeira;

TX = Percentual da taxa de juros de mora anual;

EM = Encargos moratórios;

N = Número de dias entre a data prevista para o pagamento e a do efetivo pagamento;

VP = Valor da parcela em atraso.

12.4. Por ocasião do pagamento, será efetuada a retenção tributária prevista na legislação aplicável, nos termos da Instrução Normativa n° 1.234, de 11 de janeiro de 2012, da Secretaria da Receita Federal do Brasil.

12.5. A Contratada regularmente optante pelo Simples Nacional, instituído pelo artigo 12 da Lei Complementar nº 123, de 2006, não sofrerá a retenção quanto aos impostos e contribuições abrangidos pelo referido regime, em relação às suas receitas próprias, desde que, a cada pagamento, apresente a declaração de que trata o artigo 6° da Instrução Normativa RFB n° 1.234, de 11 de janeiro de 2012.

12.6. Junto ao corpo da Nota Fiscal/Fatura a empresa deverá fazer constar, para fins de pagamento, as informações relativas ao nome e número do banco, da agência e de sua conta corrente.

13. DAS SANÇÕES ADMINISTRATIVAS

13.1. No caso de a licitante deixar de cumprir sua proposta, será convocada a seguinte, na ordem de classificação, e assim sucessivamente, sem prejuízo da aplicação das sanções cabíveis.

13.2. Comete infração administrativa, nos termos do art. 7º da Lei 10.520/2002 e art. 49 do Decreto n.º 10.024/2019, sem prejuízo das multas previstas neste Termo e das demais cominações legais, aquele que:

13.2.1. Não assinar o contrato ou ata de registro de preços;

13.2.2. Deixar de entregar documentação exigida neste edital;

13.2.3. Apresentar documentação falsa;

13.2.4. Não mantiver a proposta;

13.2.5. Falhar ou fraudar na execução do contrato;

13.2.6. Comportar-se de modo inidôneo;

13.2.7. Fizer declaração falsa;

13.2.8. Cometer fraude fiscal.

13.3. O adjudicatário que cometer quaisquer das infrações discriminadas no subitem anterior ficará sujeito, sem prejuízo da responsabilidade civil e criminal, às seguintes sanções:

13.3.1. **Advertência** por faltas leves, assim entendidas aquelas que não acarretem prejuízos significativos para a Contratante.

13.3.2. **Multa moratória**, mensurada na forma da tabela a seguir, até o limite de 13% (treze por cento), calculada sobre o valor do objeto em atraso:

DIAS DE ATRASO	**ÍNDICE DE MULTA**	**DIAS DE ATRASO**	**ÍNDICE DE MULTA**	**DIAS DE ATRASO**	**ÍNDICE DE MULTA**
1	0,1%	**15**	2,5%	**29**	7,6%
2	0,2%	**16**	2,8%	**30**	8,0%
3	0,3%	**17**	3,1%	**31**	8,5%
4	0,4%	**18**	3,4%	**32**	9,0%
5	0,5%	**19**	3,7%	**33**	9,5%
6	0,6%	**20**	4,0%	**34**	10,0%
7	0,7%	**21**	4,4%	**35**	10,5%
8	0,8%	**22**	4,8%	**36**	11,0%
9	0,9%	**23**	5,2%	**37**	11,5%
10	1,0%	**24**	5,6%	**38**	12,0%

11	1,3%	**25**	6%	**39**	12,5%
12	1,6%	**26**	6,4%	**40**	13,0%
13	1,9%	**27**	6,8%	-	-
14	2,2%	**28**	7,2%	-	-

13.3.2.1. A multa moratória prevista neste subitem não impede que a Administração rescinda unilateralmente o contrato e aplique as outras sanções previstas em Lei;

13.3.3. **Multa compensatória de 15% (quinze por cento)** sobre o valor do objeto, em caso de inexecução total da obrigação, assim entendida aquela por período superior a 40 (quarenta) dias, sem prejuízo das demais sanções cabíveis;

13.3.4. Se o atraso se der por mais de 40 (quarenta) dias, e, no entanto, a Administração considerar que ainda há interesse na aquisição por ser vantajosa e necessária, a Administração concederá novo prazo para entrega, observadas as sanções previstas no subitem 14.3.3.

13.3.5. As multas a que se referem os itens acima serão descontadas dos pagamentos devidos pelo TRE-PI ou cobradas diretamente da adjudicatária, amigável ou judicialmente, e poderão ser aplicadas cumulativamente com as demais sanções previstas neste item.

13.3.6. Não será aplicada multa de valor igual ou inferior a 10% (dez por cento) da quantia definida na Portaria nº 75, de 22 de março de 2012, do Ministério da Fazenda, ou em norma que vier a substituí-la, para inscrição de débito na Dívida Ativa da União.

13.3.6.1 As aplicações de penalidades que recaiam no subitem 14.3.6. serão convertidas em advertência por escrito.

13.3.6.2 Não se aplica o disposto no *caput* deste subitem, quando verificada, em um período de 02 (dois) anos, contados do registro da penalidade no SICAF, a ocorrência de multas que somadas ultrapassem o valor fixado para inscrição em Dívida Ativa da União.

13.3.7. No caso de não-recolhimento do valor da multa dentro do prazo estipulado na GRU, serão acrescidos juros moratórios de 0,03% ao dia até o prazo máximo de 15 (quinze) dias e, não sendo recolhida, a multa será convertida em suspensão de licitar com o TRE-PI e o valor devido ou a diferença ainda não recolhida aos cofres públicos será objeto de inscrição na Dívida Ativa da União, de acordo com a legislação em vigor.

13.3.8. **Suspensão temporária de participação em licitação e impedimento de contratar com o TRE-PI,** se, por culpa ou dolo, prejudicar ou tentar prejudicar a execução do Contrato, nos seguintes prazos e situações:

Por até **1 (um) ano**	Atraso no cumprimento das obrigações assumidas contratualmente, que tenha acarr Entrega de objeto, em desacordo com a proposta aceita pela Contratante, sem preju
Por até	Entrega de objeto falso, assim entendido, aquele em que houve manipulação características que originalmente não lhe pertençam, sem prejuízo das demais medi

2 (dois) anos	Não atendimento à solicitação de troca ou prestação de garantia do objeto, quando s Cometimento de quaisquer outras irregularidades que acarretem prejuízo ao TI CONTRATADA. Apresentação, ao TRE-PI, de qualquer documento falso ou falsificado, no todo execução do Contrato, a manutenção das condições apresentadas na habilitação, ser

13.3.9. **Declaração de inidoneidade** quando constatada má-fé, ações intencionais com prejuízos para o TRE-PI, atuação com interesses escusos, reincidência em faltas que acarretem prejuízo ao TRE-PI ou aplicações anteriores de sucessivas outras sanções, implicando proibição da CONTRATADA de transacionar com a Administração Pública, enquanto perdurarem os motivos determinantes da punição ou até que seja promovida a reabilitação perante a própria autoridade que aplicou a penalidade, podendo ser aplicada, dentre outros casos, quando:

a) Tiver sofrido condenação definitiva por ter praticado, por meios dolosos, fraude fiscal no recolhimento de quaisquer tributos;
b) Praticar atos ilícitos, visando a frustrar os objetivos da licitação;
c) Demonstrar, a qualquer tempo, não possuir idoneidade para licitar ou contratar com o TRE-PI, em virtude de atos ilícitos praticados.

13.4. A aplicação de qualquer das penalidades previstas realizar-se-á em processo administrativo que assegurará o contraditório e a ampla defesa à Contratada, observando-se o procedimento previsto na Lei nº 8.666, de 1993, e subsidiariamente a Lei nº 9.784, de 1999.

13.5. A autoridade competente, na aplicação das sanções, levará em consideração a gravidade da conduta do infrator, o caráter educativo da pena, bem como o dano causado à Administração, observado o princípio da proporcionalidade.

13.6. As multas a que se referem os itens acima serão descontadas dos pagamentos devidos pelo TRE-PI ou cobradas diretamente da empresa, amigável ou judicialmente, e poderão ser aplicadas cumulativamente com as demais sanções previstas neste tópico.

13.7. As penalidades serão precedidas de notificação e obrigatoriamente registradas no SICAF e, no caso de suspensão temporária e impedimento de licitar, estas deverão ser publicadas no Diário Oficial da União e o adjudicatário deverá ser descredenciado pelo período indicado pelo Gestor, após observado o devido contraditório e a ampla defesa, sem prejuízo das multas previstas neste Termo.

13.8. As penalidades só poderão ser relevadas nas hipóteses de caso fortuito ou força maior, devidamente justificado e comprovado, a juízo da Administração.

13.9. Os prazos de adimplemento das obrigações contratadas admitem prorrogação nos casos e condições especificados no § 1º do art. 57 da Lei 8.666/93, em caráter excepcional, sem efeito suspensivo, e deverá ser encaminhado por escrito, com antecedência mínima de 01 (um) dia do seu vencimento, anexando-se documento comprobatório do alegado pela Adjudicatária.

13.10. Eventual pedido de prorrogação deverá ser encaminhado para o seguinte endereço: Seção de Almoxarifado e Patrimônio – SEALP, Tribunal Regional Eleitoral do Piauí, Praça Des. Edgar Nogueira, S/N – Centro Cívico, bairro Cabral, Teresina-PI, CEP 64000-920, fones: (086) 2107-9811/9787, e-mail: sealp@tre-pi.jus.br;

13.11. Em casos excepcionais, autorizados pelo Contratante, o documento comprobatório do alegado poderá acompanhar a entrega do produto;

13.12. Os atos lesivos praticados pela adjudicatária serão objeto de apuração e, portanto, passíveis de responsabilização administrativa visando à aplicação das sanções previstas no art. 6º da Lei nº 12.846/2013, não afastando a possibilidade de sua responsabilização na esfera judicial.

14. PROPOSTA E CRITÉRIOS DE JULGAMENTO

14.1. A proposta deverá conter a descrição sucinta do objeto, respeitando as especificações deste Termo, contendo a marca dos produtos cotados pela empresa, bem como o preço unitário e total do item.

14.2. A classificação das propostas será pelo critério do **MENOR PREÇO POR ITEM** (**O item 3 será destinado exclusivamente à participação de Microempresas e Empresas de Pequeno Porte e os demais itens destinados à ampla concorrência)**

14.2.1. Os valores dos lances deverão observar um **intervalo mínimo de 1% (um por cento)** para cada item deste Pregão (Parágrafo único do artigo 31, do Decreto nº 10.024/2019).

14.2.2. Será adotado para o envio de lances o modo de disputa "aberto", em que os licitantes apresentarão lances públicos e sucessivos, com prorrogações.

14.2.3. **Na hipótese de não haver vencedor para a cota reservada, esta poderá ser adjudicada ao vencedor da cota principal** ou, diante de sua recusa, aos licitantes remanescentes, desde que pratiquem o preço do primeiro colocado da cota principal.

14.2.4. **Se a mesma empresa vencer a cota reservada e a cota principal**, a contratação das cotas deverá ocorrer pelo **menor preço**.

14.3. Após a etapa de lances, o licitante provisoriamente classificado deve apresentar sua proposta devidamente ajustada ao valor finalizado na sessão de lances ou na negociação, devidamente assinada, sendo redigida em língua portuguesa, salvo quanto às expressões técnicas de uso corrente. Deverá, também, ser apresentada, preferencialmente, em papel timbrado da proponente.

14.3.1. Se a proposta de menor valor não for aceitável, ou se o licitante desatender às exigências de habilitação, o Pregoeiro examinará a proposta ou lance subsequente, verificando a sua aceitabilidade e procedendo à sua habilitação, na ordem de classificação, e assim sucessivamente, até a apuração de uma proposta ou lance que atenda ao edital.

14.3.1.1. Ocorrendo a situação a que se refere o inciso anterior, o Pregoeiro poderá negociar com o licitante para que seja obtido desconto maior, ou seja, melhor**.**

14.4. A proposta que deverá conter as seguintes informações mínimas:

a) Razão Social e CNPJ da empresa licitante;

b) PREÇO UNITÁRIO DOS ITENS, ajustado ao último lance ou ao valor após negociação;

c) MARCA e MODELO e descrição detalhada dos produtos;

d) Dados bancários (BANCO; AGÊNCIA e número da CONTA CORRENTE);

e) Dados do Representante legal do licitante que assinará a Ata nome completo, CPF, e-mail, telefone, etc.) e, no caso do representante legal não ser dirigente cadastrado no SICAF, o licitante deverá encaminhar juntamente com a proposta, cópia do instrumento (procuração ou contrato social) que confere poderes para assumir obrigações em decorrência desta licitação;

f) **Validade de proposta**, não inferior a **90 (noventa) dias corridos**, a contar da data prevista para sua

abertura, esteja expressamente indicado ou não na proposta. Se, por motivo de força maior, a adjudicação não puder ocorrer dentro do período de validade da proposta o TRE-PI poderá solicitar prorrogação do prazo por igual período, caso o fornecedor concorde.

14.5. Nos preços ofertados deverão já estar considerados e inclusos todos os tributos, fretes, tarifas, despesas com material, mão-de-obra, encargos sociais, trabalhistas, fiscais, embalagens, montagens e despesas diretas e indiretas decorrentes da execução do objeto.

14.6. Junto com a proposta de preços, deverão ser encaminhados os seguintes documentos:

14.6.1. Catálogo(s) (ou encarte(s)) contendo informação(ões) básica(s) dos bens cotados, neste Termo**,** em língua portuguesa e com imagem dos objetos, com nível de informação suficiente para a perfeita identificação do modelo ou da linha do bem para a avaliação do Pregoeiro e sua Equipe de apoio, demonstrando a adequação da linha de móveis da licitante às especificações requeridas neste Termo de Referência;

14.7. A LICITANTE será inteiramente responsabilizada pelas informações prestadas em sua proposta."

15. DA VIGÊNCIA DA ATA DE REGISTRO DE PREÇOS

15.1. O prazo de vigência da ata deverá abranger um período de 12 (doze) meses, contados a partir da data de sua publicação.

15.1.1. A assinatura da ata será realizada por meio eletrônico, através de cadastramento prévio no Sistema Eletrônico de Informações - SEI do TRE-PI, por servidor autorizado por este Regional, consoante disposto no art. 16, da instrução Normativa TRE-PI nº 01/2018.

15.1.2. A existência de preços registrados não obriga o TRE-PI a efetuar as contratações, facultando-se a realização de licitação específica para as contratações pretendidas. Contudo, nesse caso, o beneficiário do registro de preços terá preferência de fornecimento, em igualdade de condições.

16. DA ADESÃO À ATA DE REGISTRO DE PREÇOS

16.1. Desde que devidamente justificada a vantagem, a Ata de Registro de Preços, durante sua vigência, poderá ser utilizada por qualquer órgão ou entidade da Administração Pública que não tenha participado do certame licitatório desde que autorizada pelo TRE-PI.

16.2. O pedido de adesão dever ser formalizado por meio do Sistema Comprasnet.

17. DOS ÓRGÃOS PARTICIPANTES

17.1. **Fará parte da licitação para o item 1, como órgão participante**, o **Instituto Federal de Educação, Ciência e Tecnologia - MT Campus Juina, que ficará responsável por sua respectiva contratação.**

17.2. O TRE-PI consolidará as informações relativas à estimativa individual e total de consumo, listando os participantes no Anexo II deste edital.

18. DO CONTRATO

18.1. A licitante será convocada para assinatura o contrato, por meio eletrônico, durante a validade da ata de registro de preços, **no prazo máximo de 05 (cinco) dias úteis,** conforme cronograma de aquisição previsto no item 3 deste termo.

18.2. O Contrato terá vigência por período igual ao da garantia dos equipamentos/serviços, a contar do recebimento definitivo.

19. DAS INFORMAÇÕES COMPLEMENTARES

19.1. Nenhuma indenização será devida às empresas por apresentarem documentação e/ou elaborarem proposta relativa ao presente Termo de Referência.

19.2. Na contagem dos prazos estabelecidos, excluir-se-á o dia do início e incluir-se-á o do vencimento. Vale ressaltar que somente se iniciam e vencem os prazos em dias de expediente no TRE-PI.

19.3. As empresas são responsáveis pela fidelidade e legitimidade das informações e dos documentos apresentados em qualquer época ou fase em decorrência deste Termo.

ANEXO I - MINUTA DE PORTARIA

Institui a Comissão de Gestão e Fiscalização do Contrato TRE-PI nº 0XX/2020, referente à prestação de serviços XXXXXX

O Presidente do Tribunal Regional Eleitoral do Piauí, no uso de suas atribuições legais e regimentais,

Considerando a necessidade de se buscar nas execuções contratuais a concreção e realização dos princípios da economicidade, eficiência e eficácia administrativas;

Considerando que a execução do contrato deverá ser acompanhada e fiscalizada por um representante da Administração especialmente designado para tal finalidade, conforme disposto no art. 58, inciso III, e arts. 66 e 67, todos da Lei nº 8.666, de 21 de junho de 1993 (Lei Geral das Licitações e Contratações);

Considerando que cabe à Administração Superior deste Tribunal a competência para designar servidor para acompanhar e fiscalizar a execução de contratos, nos termos do art. 2º da Resolução TRE-PI nº 146/2008;

Considerando o disposto na Resolução TSE nº 23.234/2010, no Acórdão nº 1214/2013-TCU/Plenário, nas recomendações contidas no Relatório de Auditoria da COCIN/TRE-PI, expostas no PAD nº 001122/2016 e na decisão da Presidência deste Tribunal (PAD nº 1269/2016),

RESOLVE:

Art. 1°- Fica criada a Comissão de Gestão do Contrato TRE-PI nº 045/2020, que trata da prestação de serviços de XXXXXXX.

Art. 2° As atribuições da fiscalização técnica, tanto dos titulares como dos substitutos eventuais, deverão recair em servidores lotados na unidade interessada pelo serviço.

Art. 3º Os casos omissos serão apreciados e resolvidos pela Secretaria de Administração, Orçamento e Finanças deste Tribunal.

Art. 4º Esta Portaria entra em vigor na data de sua publicação.

Des. JOSÉ JAMES GOMES PEREIRA

Presidente do TRE-PI

ANEXO I DA PORTARIA

COMPOSIÇÃO

A gestão administrativa do Contrato, caberá à Comissão Permanente de Fiscalização Financeira e Gestão de Contratos, instituída através da Portaria Presidência Nº 358/2020 TRE/PRESI/DG/SGP/COPES /SEREF, de 23 de abril de 2020 , evento SEI 0941392, exceto a servidora LYA RACHEL BRANDÃO E MENDES PINHEIRO, Técnico Judiciário, Área Administrativa, matrícula nº 360, tendo em vista mudança de sua lotação, a partir de 29/06/2020, conforme Portaria DG 53/2020, evento SEI 1000554.

FISCAIS TÉCNICOS

CARLOS ALBERTO RIBEIRO DO NASCIMENTO JUNIOR**,** matrícula TRE-PI nº 580, como fiscal técnico titular, e PAULO DAS NEVES E SILVA JÚNIOR, matrícula TRE-PI nº 584, como substituto, ambos lotados na Secretaria de Tecnologia da Informação - STI.

ANEXO II DA PORTARIA

ATRIBUIÇÕES

FUNÇÕES ATRIBUÍDAS À COMISSÃO PERMANENTE DE FISCALIZAÇÃO FINANCEIRA E GESTÃO DE CONTRATOS

GESTÃO ADMINISTRATIVA

a) Coordenar e acompanhar toda a execução do contrato, verificando a prestação dos serviços de forma a assegurar o cumprimento do contrato, consolidando as informações repassadas pelo fiscal técnico do contrato;

b) Convocar o preposto da CONTRATADA a comparecer à unidade de vínculo da gestão do contrato, caso seja necessário, após a assinatura de contrato, para realizar a reunião de esclarecimento das obrigações contratuais, devidamente registrada em Ata, em que esteja presente e fiscal técnico do contrato;

c) Comunicar, formalmente, a Secretaria de Administração Orçamento e Finanças o descumprimento total ou parcial, por parte da contratada, das responsabilidades assumidas em contrato, indicando o dispositivo descumprido e sugerindo as medidas julgadas necessárias à regularização das faltas observadas;

d) Encaminhar documentação comprobatória de penalizações ou multas administrativas para os setores responsáveis e solicitar providências;

e) Exigir o cumprimento de todos os itens constantes do Termo de Referência, da proposta da CONTRATADA e das cláusulas do contrato;

f) Atestar a prestação dos serviços para os fins de pagamento da fatura mensal encaminhada pela CONTRATADA, consubstanciada nos atestes da Fiscalização Técnica da contratação, quando estabelecido;

g) Autuar e instruir, mediante autorização, procedimento administrativo para tratar de vigência contratual, reajustes, prorrogações, retenções de pagamentos devidos em razão de obrigações trabalhistas inadimplidas pela contratada e para apuração de irregularidade por descumprimento total ou parcial do pacto, bem como para as demais situações ligadas à execução contratual;

h) Manter atualizado o processo de execução do contrato, com as informações de ocorrências da execução do contrato;

i) Manifestar-se, formalmente, sobre aditivos e prorrogações do contrato;

j) Cumprir e fazer cumprir nesta contratação, as determinações insertas na Resolução TRE-PI nº146/2008 e Resolução TSE nº 23.234/2010;

k) Registrar em livro e/ou arquivo digital as ocorrências encaminhadas pela fiscalização e da própria gestão, a fim de que se tenha o histórico de falhas porventura cometidas pela CONTRATADA e as providências da gestão e fiscalização do pacto para o saneamento das mesmas.

FUNÇÕES ATRIBUÍDAS AOS FISCAIS TÉCNICOS DA CONTRATAÇÃO

a) Fazer-se presente no local da execução do contrato;

b) Auxiliar a Comissão de Gestão na fiscalização da execução do contrato;

c) Comunicar à Comissão de Gestão sempre que necessário ou quando observar qualquer descumprimento na execução do contrato;

d) Dirigir-se ao preposto da contratada para resolver qualquer problema na execução do objeto, comunicando o fato a Comissão de Gestão do contrato em caso de não cumprimento, o qual deverá determinar, por escrito e com prazo para cumprimento, o que for necessário para a regularização das falhas ou fatos observados;

e) Observar as determinações insertas na Resolução TRE/PI n.º 146/2008 e o disposto na Seção IX, Capítulo III da Resolução TSE 23.234/2010;

f) Atestar, em documento apresentado pela contratada, a correta prestação dos serviços;

g) Observar rigorosamente os princípios legais e éticos em todos os atos inerentes às suas atribuições, agindo com transparência no desempenho de suas atividades;

h) Apresentar críticas e propor sugestões que visem tornar a fiscalização efetiva e aprimorar a agilização dos trabalhos de fiscalização, tornando-os mais eficazes, propondo medidas regularizadoras;

i) Acompanhar e fiscalizar a execução dos serviços e anotar em registro próprio - Livro e/ou arquivo digital, todas as ocorrências relacionadas com a execução, sob os aspectos quantitativos e qualitativos, comunicando as ocorrências de quaisquer fatos que exijam medidas corretivas por parte da CONTRATADA a Comissão de Gestão.

Documento assinado eletronicamente por **Sidnei Antunes Ribeiro**, **Chefe de Seção**, em 22/10/2020, às 13:07, conforme art. 1º, § 2º, III, "b", da Lei 11.419/2006.

Documento assinado eletronicamente por **Carlos Alberto Ribeiro do Nascimento Junior**, **Técnico Judiciário**, em 22/10/2020, às 13:13, conforme art. 1º, § 2º, III, "b", da Lei 11.419/2006.

Documento assinado eletronicamente por **Antonio Manoel Silveira de Sousa**, **Coordenador de Desenvolvimento e Infraestrutura**, em 22/10/2020, às 13:54, conforme art. 1º, § 2º, III, "b", da Lei 11.419/2006.

A autenticidade do documento pode ser conferida no site https://sei.tre-pi.jus.br /sei/controlador_externo.php?acao=documento_conferir&id_orgao_acesso_externo=0 informando o código verificador **1094804** e o código CRC **05E5C1DE**.

SONICWALL

SonicWall Network Security appliance (NSa) series

Industry-validated security effectiveness and performance for mid-sized networks, distributed enterprises and data centers

The SonicWall Network Security appliance (NSa) series provides organizations that range in scale from mid-sized networks to distributed enterprises and data centers with advanced threat prevention in a high-performance security platform. Utilizing innovative deep learning technologies in the SonicWall Capture Cloud Platform, the NSa series delivers the automated real-time breach detection and prevention organizations need.

Cutting-edge threat prevention with superior performance

Today's network threats are highly evasive and increasingly difficult to identify using traditional methods of detection. Staying ahead of sophisticated attacks requires a more modern approach that heavily leverages security intelligence in the cloud. Without that cloud intelligence, gateway security solutions can't keep pace with today's complex threats. NSa series next-generation firewalls (NGFWs) integrate two advanced security technologies to deliver cutting-edge threat prevention that keeps your network one step ahead. Enhancing SonicWall's multi-engine Capture Advanced Threat Protection (ATP) service is our patent-pending Real-Time Deep Memory Inspection (RTDMI™) technology. The RTDMI engine proactively detects and blocks mass market, zero-day threats and unknown malware by inspecting directly in memory. Because of the real-time architecture, SonicWall RTDMI technology is precise, minimizes false positives, and identifies and mitigates sophisticated attacks where the malware's weaponry is exposed for less than 100 nanoseconds. In combination, SonicWall's patented* single-pass Reassembly-Free Deep Packet Inspection (RFDPI) engine examines every byte of every packet, inspecting both inbound and outbound traffic on the firewall. By leveraging the SonicWall Capture Cloud Platform in addition to on-box capabilities including intrusion prevention, anti-malware and web/URL filtering, the NSa series blocks even the most insidious threats at the gateway.

Further, SonicWall firewalls provide complete protection by performing full decryption and inspection of TLS/SSL and SSH encrypted connections regardless of port or protocol. The firewall looks deep inside every packet (the header and data) searching for protocol non-compliance, threats, zero-days, intrusions, and even defined criteria. The deep packet inspection engine detects and prevents hidden attacks that leverage cryptography, blocks encrypted malware downloads, ceases the spread of infections, and thwarts command and control (C&C) communications and data exfiltration. Inclusion and exclusion rules allow total control to customize which traffic is subjected to decryption and inspection based on specific organizational compliance and/or legal requirements.

When organizations activate deep packet inspection functions such as IPS, anti-virus, anti-spyware, TLS/SSL decryption/inspection and others on their firewalls,

Benefits:

- Superior threat prevention and performance
- Patent-pending real-time deep memory inspection technology
- Patented reassembly-free deep packet inspection technology
- On-box and cloud-based threat prevention
- TLS/SSL decryption and inspection
- Industry-validated security effectiveness
- Multi-core hardware architecture
- Dedicated Capture Labs threat research team

Network control and flexibility

- Secure SD-WAN
- Powerful SonicOS operating system
- Application intelligence and control
- Network segmentation with VLANs
- High-speed wireless security

Easy deployment, setup and ongoing management

- Zero-Touch Deployment
- Cloud-based and on-premises centralized management
- Scalable line of firewalls
- Low total cost of ownership

U.S. Patents 7,310,815; 7,600,257; 7,738,380; 7,835,361; 7,991,723

network performance often slows down, sometimes dramatically. NSa series firewalls, however, feature a multi-core hardware architecture that utilizes specialized security microprocessors. Combined with our RTDMI and RFDPI engines, this unique design eliminates the performance degradation networks experience with other firewalls.

Network control and flexibility

At the core of the NSa series is SonicOS, SonicWall's feature-rich operating system. SonicOS provides organizations with the network control and flexibility they require through application intelligence and control, real-time visualization, an intrusion prevention system (IPS) featuring sophisticated anti-evasion technology, high-speed virtual private networking (VPN) and other robust security features.

Using application intelligence and control, network administrators can identify and categorize productive applications from those that are unproductive or potentially dangerous, and control that traffic through powerful application-level policies on both a per-user and a per-group basis (along with schedules and exception lists). Business-critical applications can be prioritized and allocated more bandwidth while non-essential applications are bandwidth-limited. Real-time monitoring and visualization provides a graphical representation of applications, users and bandwidth usage for granular insight into traffic across the network.

For distributed organizations requiring advanced flexibility in their network design, the SD-WAN technology in SonicOS is a perfect complement to NSa firewalls deployed at the headquarters or at remote and branch sites. Instead of relying on more expensive legacy technologies such as MPLS and T1, organizations using SD-WAN can choose lower-cost public Internet services while continuing to achieve a high level of application availability and predictable performance.

Built into every NSa series firewall is a wireless access controller that enables organizations to extend the network perimeter securely through the use of wireless technology. Together, SonicWall firewalls and SonicWave 802.11ac Wave 2 wireless access points create a wireless network security solution that combines industry-leading next-generation firewall technology with high-speed wireless for enterprise-class network security and performance across the wireless network.

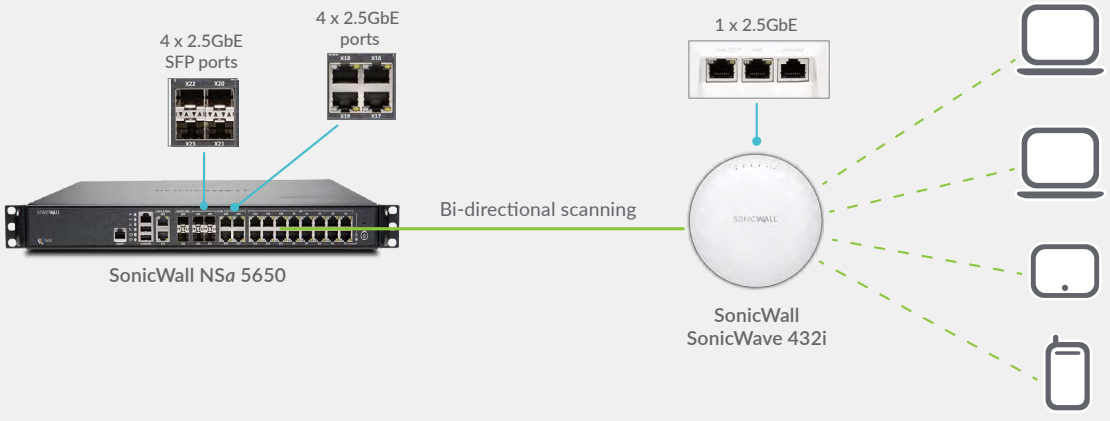
Easy deployment, setup and ongoing management

Like all SonicWall firewalls, the NSa series tightly integrates key security, connectivity and flexibility technologies into a single, comprehensive solution. This includes SonicWave wireless access points and the SonicWall WAN Acceleration (WXA) series, both of which are automatically detected and provisioned by the managing NSa firewall. Consolidating multiple capabilities eliminates the need to purchase and install point products that don't always work well together. This reduces the effort it takes to deploy the solution into the network and configure it, saving both time and money.

Cloud-based centralized management, reporting, licensing and analytics are handled through the SonicWall Capture Security Center. A key component of the Capture Security Center is Zero-Touch Deployment. This cloud-based feature simplifies and speeds the deployment and provisioning of SonicWall firewalls at remote and branch office locations. Together, the simplified deployment and setup along with the ease of management enable organizations to lower their total cost of ownership and realize a high return on investment.

Secure, High-speed Wireless

Combine an NSa series next-generation firewall with a SonicWall SonicWave 802.11ac Wave 2 wireless access point to create a high-speed wireless network security solution. NSa series firewalls and SonicWave access points both feature 2.5 GbE ports that enable multi-gigabit wireless throughput offered in Wave 2 wireless technology. The firewall scans all wireless traffic coming into and going out of the network using deep packet inspection technology and then removes harmful threats such as malware and intrusions, even over encrypted connections. Additional security and control capabilities such as content filtering, application control and intelligence and Capture Advanced Threat Protection can be run on the wireless network to provide added layers of protection.

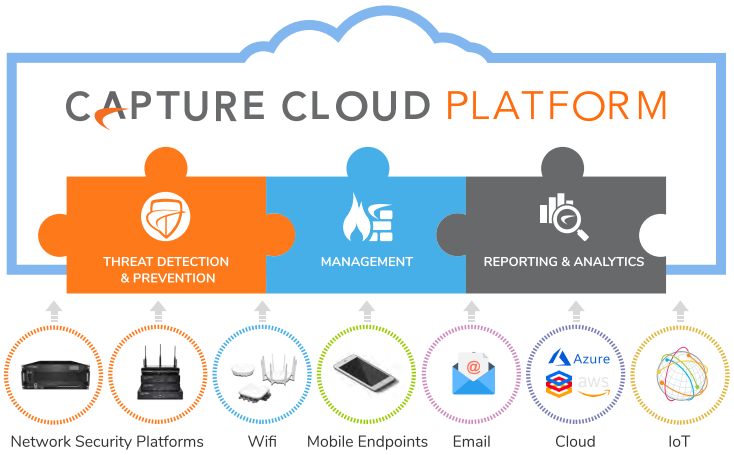


Capture Cloud Platform

SonicWall's Capture Cloud Platform delivers cloud-based threat prevention and network management plus reporting and analytics for organizations of any size. The platform consolidates threat intelligence gathered from multiple sources including our award-winning multi-engine network sandboxing service, Capture Advanced Threat Protection, as well as more than 1 million SonicWall sensors located around the globe.

If data coming into the network is found to contain previously-unseen malicious code, SonicWall's dedicated, in-house Capture Labs threat research team develops signatures that are stored in the Capture Cloud Platform database and deployed to customer firewalls for up-to-date protection. New updates take effect immediately without reboots or interruptions. The signatures resident on the appliance protect against wide classes of attacks, covering tens of thousands of individual threats. In addition to the countermeasures on the appliance, NSa firewalls also have continuous access to the Capture Cloud Platform database which extends the onboard signature intelligence with tens of millions of signatures.

In addition to providing threat prevention, the Capture Cloud Platform offers single pane of glass management and administrators can easily create both real-time and historical reports on network activity.



Advanced threat protection

At the center of SonicWall's automated, real-time breach prevention are two advanced malware detection technologies; Capture Advanced Threat Protection™ (Capture ATP) and Capture Security appliance™ (CSa).

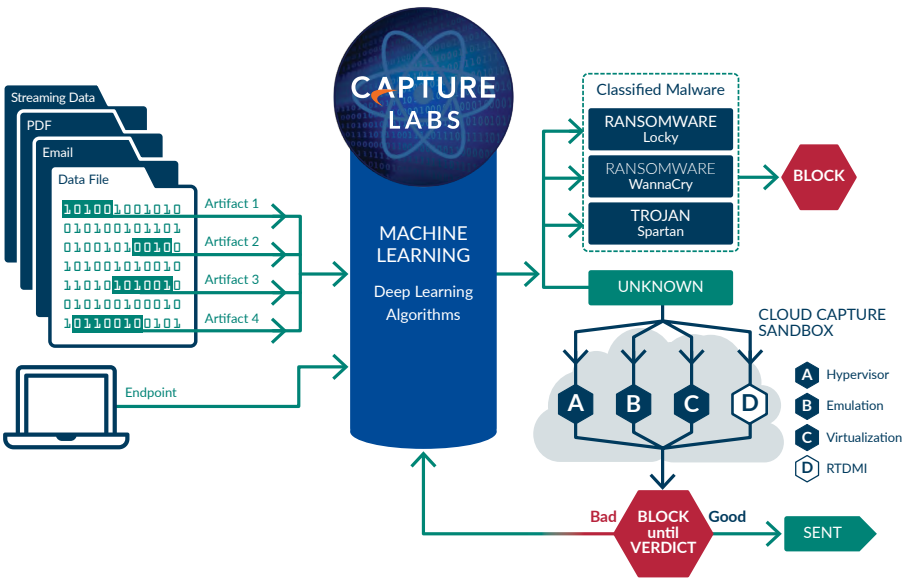
Capture ATP is a cloud-based multi-engine sandbox platform, which includes Real-Time Deep Memory Inspection™ (RTDMI), virtualized sandboxing, full system emulation and hypervisor level analysis technology. CSa is an on-premises device that features RTDMI, which utilizes memory-based static and dynamic techniques for fast and accurate verdicts. Both solutions extend advanced threat protection to detect and prevent zero-day threats in a variety of SonicWall solutions such as next-generation firewalls.

Suspicious files are sent to either solution where they are analyzed using deep learning algorithms with the option to hold them at the gateway until a verdict is determined.

In the case of Capture ATP, when files are identified as malicious, they are blocked, and a hash is immediately created within the Capture ATP database for all customers to leverage to block follow-on attacks. These signatures are eventually sent to firewalls to create static defenses. Results generated by CSa are not shared outside your organization for privacy and compliance reasons.

These services analyze a broad range of operating systems and file types, including executable programs, DLL, PDFs, MS Office documents, archives, JAR and APK.

For complete endpoint protection, the SonicWall Capture Client combines next-generation antivirus technology with SonicWall's cloud-based multi-engine sandbox with optional integration with SonicWall firewalls.



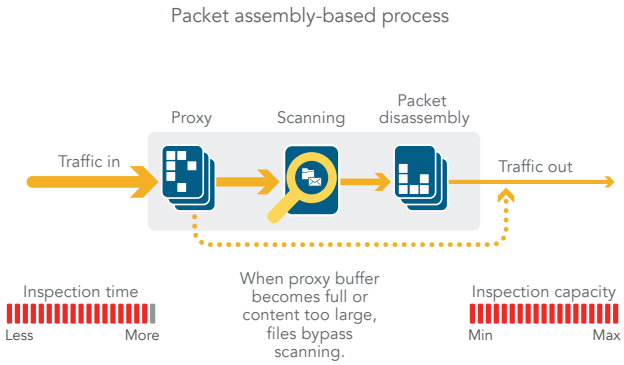
SONICWALL®

Reassembly-Free Deep Packet Inspection engine

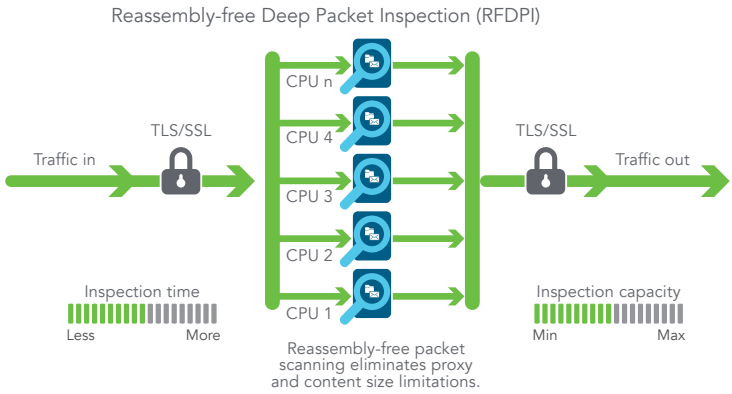
The SonicWall Reassembly-Free Deep Packet Inspection (RFDPI) is a single-pass, low latency inspection system that performs stream-based, bi-directional traffic analysis at high speed without proxying or buffering to effectively uncover intrusion attempts and malware downloads while identifying application traffic regardless of port and protocol. This proprietary engine relies on streaming traffic payload inspection to detect threats at Layers 3-7, and takes network streams through extensive and repeated normalization and decryption in order to neutralize advanced evasion techniques that seek to confuse detection engines and sneak malicious code into the network.

Once a packet undergoes the necessary pre-processing, including TLS/SSL decryption, it is analyzed against a single, proprietary memory representation of three signature databases: intrusion attacks, malware and applications. The connection state is then advanced to represent the position of the stream relative to these databases until it encounters a state of attack, or other "match" event, at which point a pre-set action is taken.

In most cases, the connection is terminated and proper logging and notification events are created. However, the engine can also be configured for inspection only or, in case of application detection, to provide Layer 7 bandwidth management services for the remainder of the application stream as soon as the application is identified.



Competitive proxy-based architecture



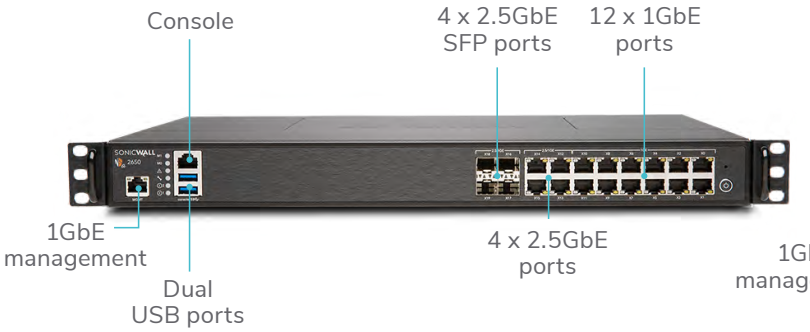
SonicWall stream-based architecture

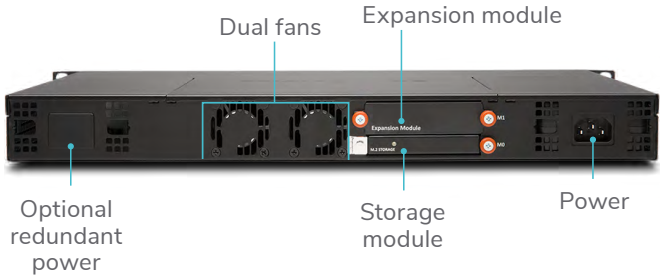
Centralized management and reporting

For highly regulated organizations wanting to achieve a fully coordinated security governance, compliance and risk management strategy, SonicWall provides administrators a unified, secure and extensible platform to manage SonicWall firewalls, wireless access points and Dell N-Series and X-Series switches through a correlated and auditable workstream process. Enterprises can easily consolidate the management of security appliances, reduce administrative and troubleshooting complexities, and govern all operational aspects of the security infrastructure, including centralized policy management and enforcement; real-time event monitoring; user activities; application identifications; flow analytics and forensics; compliance and audit reporting; and more. In addition, enterprises meet the firewall's change management requirements through workflow automation which provides the agility and confidence to deploy the right firewall policies at the right time and in conformance with compliance regulations. Available on premises as SonicWall Global Management System and in the cloud as Capture Security Center, SonicWall management and reporting solutions provide a coherent way to manage network security by business processes and service levels, dramatically simplifying lifecycle management of your overall security environments compared to managing on a device-by-device basis.

NSa 2650

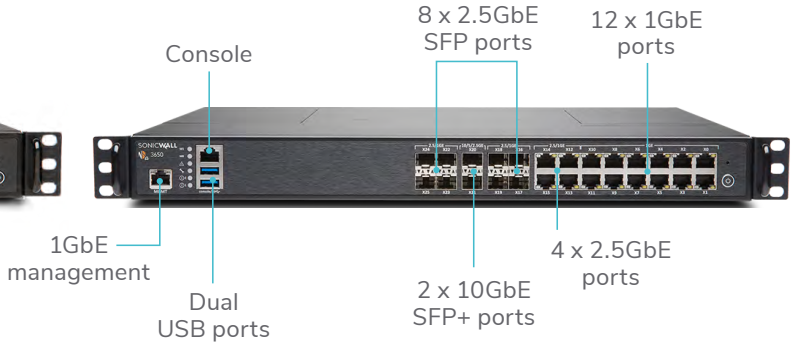
The NSa 2650 delivers high-speed threat prevention over thousands of encrypted and even more unencrypted connections to mid-sized organizations and distributed enterprises.

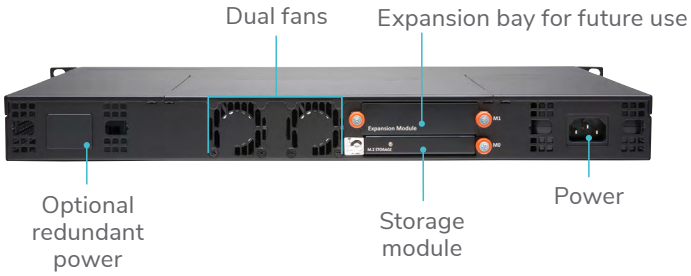




NSa 3650

The SonicWall NSa 3650 is ideal for branch office and small- to medium-sized corporate environments concerned about throughput capacity and performance.





Firewall	NSa 2650
Firewall throughput	3.0 Gbps
IPS throughput	1.4 Gbps
Anti-malware throughput	1.3 Gbps
Threat Prevention throughput	1.5 Gbps
Maximum connections	1,000,000
New connections/sec	14,000/sec
Storage module	16 GB

Features

RFDPI ENGINE

Feature	Description
Reassembly-Free Deep Packet Inspection (RFDPI)	This high-performance, proprietary and patented inspection engine performs stream-based, bi-directional traffic analysis, without proxying or buffering, to uncover intrusion attempts and malware and to identify application traffic regardless of port.
Bi-directional inspection	Scans for threats in both inbound and outbound traffic simultaneously to ensure that the network is not used to distribute malware and does not become a launch platform for attacks in case an infected machine is brought inside.
Stream-based inspection	Proxy-less and non-buffering inspection technology provides ultra-low latency performance for DPI of millions of simultaneous network streams without introducing file and stream size limitations, and can be applied on common protocols as well as raw TCP streams.
Highly parallel and scalable	The unique design of the RFDPI engine works with the multi-core architecture to provide high DPI throughput and extremely high new session establishment rates to deal with traffic spikes in demanding networks.
Single-pass inspection	A single-pass DPI architecture simultaneously scans for malware, intrusions and application identification, drastically reducing DPI latency and ensuring that all threat information is correlated in a single architecture.

Feature	Description
Secure SD-WAN	An alternative to more expensive technologies such as MPLS, Secure SD-WAN enables distributed enterprise organizations to build, operate and manage secure, high-performance networks across remote sites for the purpose of sharing data, applications and services using using readily-available, low-cost public internet services.
REST APIs	Allows the firewall to receive and leverage any and all proprietary, original equipment manufacturer and third-party intelligence feeds to combat advanced threats such as zero-day, malicious insider, compromised credentials, ransomware and advanced persistent threats.
Stateful packet inspection	All network traffic is inspected, analyzed and brought into compliance with firewall access policies.
High availability/clustering	The NSa series supports Active/Passive (A/P) with state synchronization, Active/Active (A/A) DPI and Active/Active clustering high availability modes. Active/Active DPI offloads the deep packet inspection load to cores on the passive appliance to boost throughput.
DDoS/DoS attack protection	SYN flood protection provides a defense against DoS attacks using both Layer 3 SYN proxy and Layer 2 SYN blacklisting technologies. Additionally, it protects against DoS/DDoS through UDP/ICMP flood protection and connection rate limiting.
IPv6 support	Internet Protocol version 6 (IPv6) is in its early stages to replace IPv4. With SonicOS, the hardware will support filtering and wire mode implementations.
Flexible deployment options	The NSa series can be deployed in traditional NAT, Layer 2 bridge, wire and network tap modes.
WAN load balancing	Load-balances multiple WAN interfaces using Round Robin, Spillover or Percentage methods.
Advanced quality of service (QoS)	Guarantees critical communications with 802.1p, DSCP tagging, and remapping of VoIP traffic on the network.
H.323 gatekeeper and SIP proxy support	Blocks spam calls by requiring that all incoming calls are authorized and authenticated by H.323 gatekeeper or SIP proxy.
Single and cascaded Dell N-Series and X-Series switch management	Manage security settings of additional ports, including Portshield, HA, PoE and PoE+, under a single pane of glass using the firewall management dashboard for Dell's N-Series and X-Series network switch.
Biometric authentication	Supports mobile device authentication such as fingerprint recognition that cannot be easily duplicated or shared to securely authenticate the user identity for network access.
Open authentication and social login	Enable guest users to use their credentials from social networking services such as Facebook, Twitter, or Google+ to sign in and access the Internet and other guest services through a host's wireless, LAN or DMZ zones using pass-through authentication.

MANAGEMENT AND REPORTING

Feature	Description
Cloud-based and on-premises management	Configuration and management of SonicWall appliances is available via the cloud through the SonicWall Capture Security Center and on-premises using SonicWall Global Management System (GMS).
Powerful single device management	An intuitive web-based interface allows quick and convenient configuration, in addition to a comprehensive command-line interface and support for SNMPv2/3.
IPFIX/NetFlow application flow reporting	Exports application traffic analytics and usage data through IPFIX or NetFlow protocols for real-time and historical monitoring and reporting with tools such as SonicWall Scrutinizer or other tools that support IPFIX and NetFlow with extensions.

VIRTUAL PRIVATE NETWORKING (VPN)

Feature	Description
Auto-provision VPN	Simplifies and reduces complex distributed firewall deployment down to a trivial effort by automating the initial site-to-site VPN gateway provisioning between SonicWall firewalls while security and connectivity occurs instantly and automatically.
IPSec VPN for site-to-site connectivity	High-performance IPSec VPN allows the NSa series to act as a VPN concentrator for thousands of other large sites, branch offices or home offices.
SSL VPN or IPSec client remote access	Utilizes clientless SSL VPN technology or an easy-to-manage IPSec client for easy access to email, files, computers, intranet sites and applications from a variety of platforms.

Redundant VPN gateway	When using multiple WANs, a primary and secondary VPN can be configured to allow seamless, automatic failover and failback of all VPN sessions.
Route-based VPN	The ability to perform dynamic routing over VPN links ensures continuous uptime in the event of a temporary VPN tunnel failure, by seamlessly re-routing traffic between endpoints through alternate routes.

CONTENT/CONTEXT AWARENESS

Feature	Description
User activity tracking	User identification and activity are made available through seamless AD/LDAP/Citrix/Terminal Services SSO integration combined with extensive information obtained through DPI.
GeoIP country traffic identification	Identifies and controls network traffic going to or coming from specific countries to either protect against attacks from known or suspected origins of threat activity, or to investigate suspicious traffic originating from the network. Ability to create custom country and Botnet lists to override an incorrect country or Botnet tag associated with an IP address. Eliminates unwanted filtering of IP addresses due to misclassification.
Regular expression DPI filtering	Prevents data leakage by identifying and controlling content crossing the network through regular expression matching. Provides the ability to create custom country and Botnet lists to override an incorrect country or Botnet tag associated with an IP address.

Breach prevention subscription services

CAPTURE ADVANCED THREAT PROTECTION

Feature	Description
Multi-engine sandboxing	The multi-engine sandbox platform, which includes virtualized sandboxing, full system emulation, and hypervisor level analysis technology, executes suspicious code and analyzes behavior, providing comprehensive visibility to malicious activity.
Real-Time Deep Memory Inspection (RTDMI)	This patent-pending cloud-based technology detects and blocks malware that does not exhibit any malicious behavior and hides its weaponry via encryption. By forcing malware to reveal its weaponry into memory, the RTDMI engine proactively detects and blocks mass-market, zero-day threats and unknown malware.
Block until verdict	To prevent potentially malicious files from entering the network, files sent to the cloud for analysis can be held at the gateway until a verdict is determined.
Broad file type and size analysis	Supports analysis of a broad range of file types, either individually or as a group, including executable programs (PE), DLL, PDFs, MS Office documents, archives, JAR, and APK plus multiple operating systems including Windows, Android, Mac OS X and multi-browser environments.
Rapid deployment of signatures	When a file is identified as malicious, a signature is immediately deployed to firewalls with SonicWall Capture ATP subscriptions and Gateway Anti-Virus and IPS signature databases and the URL, IP and domain reputation databases within 48 hours.
Capture Client	Capture Client is a unified client platform that delivers multiple endpoint protection capabilities, including advanced malware protection and support for visibility into encrypted traffic. It leverages layered protection technologies, comprehensive reporting and endpoint protection enforcement.

CAPTURE SECURITY APPLIANCE (CSa)

Feature	Description
Compliance-centered malware detection	Analyze suspicious files in your own environment without sending files or results to a third-party cloud.
Built-in integrations	CSa supports out of the box integrations with other security solutions (firewalls and email security) from SonicWall.
Near real-time protection	SonicWall's patented RTDMI technology helps detect malware quickly, even for previously unknown malware, that CSa can enable the block until verdict capability on SonicWall next-generation firewalls.
Deployment	CSa can be configured on a private network directly connected to a singular edge firewall or be reachable over the Internet directly or using VPN by branch firewalls.

ENCRYPTED THREAT PREVENTION

Feature	Description
TLS/SSL decryption and inspection	Decrypts and inspects TLS/SSL encrypted traffic on the fly, without proxying, for malware, intrusions and data leakage, and applies application, URL and content control policies in order to protect against threats hidden in encrypted traffic. Included with security subscriptions for all NSa series models.
SSH inspection	Deep packet inspection of SSH (DPI-SSH) decrypts and inspect data traversing over SSH tunnel to prevent attacks that leverage SSH.

INTRUSION PREVENTION

Feature	Description
Countermeasure-based protection	Tightly integrated intrusion prevention system (IPS) leverages signatures and other countermeasures to scan packet payloads for vulnerabilities and exploits, covering a broad spectrum of attacks and vulnerabilities.
Automatic signature updates	The SonicWall Threat Research Team continuously researches and deploys updates to an extensive list of IPS countermeasures that covers more than 50 attack categories. The new updates take immediate effect without any reboot or service interruption required.
Intra-zone IPS protection	Bolsters internal security by segmenting the network into multiple security zones with intrusion prevention, preventing threats from propagating across the zone boundaries.

Botnet command and control (CnC) detection and blocking	Identifies and blocks command and control traffic originating from bots on the local network to IPs and domains that are identified as propagating malware or are known CnC points.
Protocol abuse/anomaly	Identifies and blocks attacks that abuse protocols in an attempt to sneak past the IPS.
Zero-day protection	Protects the network against zero-day attacks with constant updates against the latest exploit methods and techniques that cover thousands of individual exploits.
Anti-evasion technology	Extensive stream normalization, decoding and other techniques ensure that threats do not enter the network undetected by utilizing evasion techniques in Layers 2-7.

THREAT PREVENTION

Feature	Description
Gateway anti-malware	The RFDPI engine scans all inbound, outbound and intra-zone traffic for viruses, Trojans, key loggers and other malware in files of unlimited length and size across all ports and TCP streams.
Capture Cloud malware protection	A continuously updated database of tens of millions of threat signatures resides in the SonicWall cloud servers and is referenced to augment the capabilities of the onboard signature database, providing RFDPI with extensive coverage of threats.
Around-the-clock security updates	New threat updates are automatically pushed to firewalls in the field with active security services, and take effect immediately without reboots or interruptions.
Bi-directional raw TCP inspection	The RFDPI engine is capable of scanning raw TCP streams on any port bi-directionally preventing attacks that they to sneak by outdated security systems that focus on securing a few well-known ports.
Extensive protocol support	Identifies common protocols such as HTTP/S, FTP, SMTP, SMBv1/v2 and others, which do not send data in raw TCP, and decodes payloads for malware inspection, even if they do not run on standard, well-known ports.

APPLICATION INTELLIGENCE AND CONTROL

Feature	Description
Application control	Control applications, or individual application features, that are identified by the RFDPI engine against a continuously expanding database of over thousands of application signatures, to increase network security and enhance network productivity.
Custom application identification	Control custom applications by creating signatures based on specific parameters or patterns unique to an application in its network communications, in order to gain further control over the network.
Application bandwidth management	Granularly allocate and regulate available bandwidth for critical applications or application categories while inhibiting nonessential application traffic.
Granular control	Control applications, or specific components of an application, based on schedules, user groups, exclusion lists and a range of actions with full SSO user identification through LDAP/AD/Terminal Services/Citrix integration.

CONTENT FILTERING

Feature	Description
Inside/outside content filtering	Enforce acceptable use policies and block access to HTTP/HTTPS websites containing information or images that are objectionable or unproductive with Content Filtering Service and Content Filtering Client.
Enforced Content Filtering Client	Extend policy enforcement to block internet content for Windows, Mac OS, Android and Chrome devices located outside the firewall perimeter.
Granular controls	Block content using the predefined categories or any combination of categories. Filtering can be scheduled by time of day, such as during school or business hours, and applied to individual users or groups.
Web caching	URL ratings are cached locally on the SonicWall firewall so that the response time for subsequent access to frequently visited sites is only a fraction of a second.

ENFORCED ANTIVIRUS AND ANTI-SPYWARE

Feature	Description
Multi-layered protection	Utilize the firewall capabilities as the first layer of defense at the perimeter, coupled with endpoint protection to block, viruses entering network through laptops, thumb drives and other unprotected systems.
Automated enforcement option	Ensure every computer accessing the network has the appropriate antivirus software and/or DPI-SSL certificate installed and active, eliminating the costs commonly associated with desktop antivirus management.
Automated deployment and installation option	Machine-by-machine deployment and installation of antivirus and anti-spyware clients is automatic across the network, minimizing administrative overhead.
Next-generation antivirus	Capture Client uses a static artificial intelligence (AI) engine to determine threats before they can execute and roll back to a previous uninfected state.
Spyware protection	Powerful spyware protection scans and blocks the installation of a comprehensive array of spyware programs on desktops and laptops before they transmit confidential data, providing greater desktop security and performance.

SonicOS feature summary

Firewall
- Stateful packet inspection
- Reassembly-Free Deep Packet Inspection
- DDoS attack protection (UDP/ICMP/ SYN flood)
- IPv4/IPv6
- Biometric authentication for remote access
- DNS proxy
- REST APIs

TLS/SSL/SSH decryption and inspection[1]
- Deep packet inspection for TLS/SSL/SSH
- Inclusion/exclusion of objects, groups or hostnames
- TLS/SSL control
- Granular DPI SSL controls per zone or rule

Capture advanced threat protection[1]
- Real-Time Deep Memory Inspection
- Cloud-based multi-engine analysis
- Virtualized sandboxing
- Hypervisor level analysis
- Full system emulation
- Broad file type examination
- Automated and manual submission
- Real-time threat intelligence updates
- Block until verdict
- Capture Client

Intrusion prevention[1]
- Signature-based scanning
- Automatic signature updates
- Bi-directional inspection
- Granular IPS rule capability
- GeoIP enforcement
- Botnet filtering with dynamic list
- Regular expression matching

Anti-malware[1]
- Stream-based malware scanning
- Gateway anti-virus
- Gateway anti-spyware
- Bi-directional inspection
- No file size limitation
- Cloud malware database

Application identification[1]
- Application control
- Application bandwidth management
- Custom application signature creation
- Data leakage prevention
- Application reporting over NetFlow/IPFIX
- Comprehensive application signature database

Traffic visualization and analytics
- User activity
- Application/bandwidth/threat usage
- Cloud-based analytics

HTTP/HTTPS Web content filtering[1]
- URL filtering
- Proxy avoidance
- Keyword blocking
- Policy-based filtering (exclusion/inclusion)
- HTTP header insertion
- Bandwidth manage CFS rating categories
- Unified policy model with app control
- Content Filtering Client

VPN
- Auto-provision VPN
- IPSec VPN for site-to-site connectivity
- SSL VPN and IPSec client remote access
- Redundant VPN gateway
- Mobile Connect for iOS, Mac OS X, Windows, Chrome, Android and Kindle Fire
- Route-based VPN (OSPF, RIP, BGP)

Networking
- Secure SD-WAN
- PortShield
- Jumbo frames
- Enhanced logging
- VLAN trunking
- RSTP (Rapid Spanning Tree Protocol)
- Port mirroring
- Layer-2 QoS
- Port security
- Dynamic routing (RIP/OSPF/BGP)
- SonicWall wireless controller
- Policy-based routing (ToS/metric and ECMP)
- NAT
- DNS security
- DHCP server
- Bandwidth management
- Link aggregation (static and dynamic)
- Port redundancy
- A/P high availability with state sync
- A/A clustering
- Inbound/outbound load balancing
- L2 bridge, wire/virtual wire mode, tap mode
- 3G/4G WAN failover
- Asymmetric routing
- Common Access Card (CAC) support

Wireless
- WIDS/WIPS
- RF spectrum analysis
- Rogue AP prevention
- Fast roaming (802.11k/r/v)
- Auto-channel selection
- Floor plan view/Topology view
- Band steering
- Beamforming
- AirTime fairness
- MiFi extender
- Guest cyclic quota
- LHM guest portal

VoIP
- Granular QoS control
- Bandwidth management
- SIP and H.323 transformations per access rule
- H.323 gatekeeper and SIP proxy support

Management and monitoring
- Capture Security Center, GMS, Web UI, CLI, REST APIs, SNMPv2/v3
- Logging
- Netflow/IPFix exporting
- Cloud-based configuration backup
- BlueCoat Security Analytics Platform
- SonicWall access point management
- Dell N-Series and X-Series switch management including cascaded switches

Local storage
- Logs
- Reports
- Firmware backups

[1] Testing Methodologies: Maximum performance based on RFC 2544 (for firewall). Actual performance may vary depending on network conditions and activated services.
[2] Threat Prevention/Gateway AV/Anti-Spyware/IPS throughput measured using industry standard Spirent WebAvalanche HTTP performance test and Ixia test tools. Testing done with multiple flows through multiple port pairs. Threat Prevention throughput measured with Gateway AV, Anti-Spyware, IPS and Application Control enabled. DPI SSL performance measured on HTTPS traffic with IPS enabled.
[3] VPN throughput measured using UDP traffic at 1280 byte packet size adhering to RFC 2544. All specifications, features and availability are subject to change.
[4] For every 125,000 DPI connections reduced, the number of available DPI SSL connections increases by 3,000 except for NSa 9250 and above.
[5] Active/Active Clustering and Active/Active DPI with State Sync require purchase of Expanded License except for NSa 9250 and above.
**Future use. All specifications, features and availability are subject to change.*

NSa series ordering information

NSa 2650	SKU
NSa 2650 TotalSecure Advanced Edition (1-year)	01-SSC-1988
Advanced Gateway Security Suite – Capture ATP, Threat Prevention, and 24x7 Support for NSa 2650 (1-year)	01-SSC-1783
Capture Advanced Threat Protection for NSa 2650 (1-year)	01-SSC-1935
Threat Prevention–Intrusion Prevention, Gateway Anti-Virus, Gateway Anti-Spyware, Cloud Anti-Virus for NSa 2650 (1-year)	01-SSC-1976
24x7 Support for NSa 2650 (1-year)	01-SSC-1541
Content Filtering Service for NSa 2650 (1-year)	01-SSC-1970
Capture Client	Based on user count
Comprehensive Anti-Spam Service for NSa 2650 (1-year)	01-SSC-2001

NSa 3650	SKU
NSa 3650 TotalSecure Advanced Edition (1-year)	01-SSC-4081
Advanced Gateway Security Suite – Capture ATP, Threat Prevention, and 24x7 Support for NSa 3650 (1-year)	01-SSC-3451
Capture Advanced Threat Protection for NSa 3650 (1-year)	01-SSC-3457
Threat Prevention–Intrusion Prevention, Gateway Anti-Virus, Gateway Anti-Spyware, Cloud Anti-Virus for NSa 3650 (1-year)	01-SSC-3632
24x7 Support for NSa 3650 (1-year)	01-SSC-3439
Content Filtering Service for NSa 3650 (1-year)	01-SSC-3469
Capture Client	Based on user count
Comprehensive Anti-Spam Service for NSa 3650 (1-year)	01-SSC-4030

NSa 4650	SKU
NSa 4650 TotalSecure Advanced Edition (1-year)	01-SSC-4094
Advanced Gateway Security Suite – Capture ATP, Threat Prevention, and 24x7 Support for NSa 4650 (1-year)	01-SSC-3493
Capture Advanced Threat Protection for NSa 4650 (1-year)	01-SSC-3499
Threat Prevention–Intrusion Prevention, Gateway Anti-Virus, Gateway Anti-Spyware, Cloud Anti-Virus for NSa 4650 (1-year)	01-SSC-3589
24x7 Support for NSa 4650 (1-year)	01-SSC-3487
Content Filtering Service for NSa 4650 (1-year)	01-SSC-3583
Capture Client	Based on user count
Comprehensive Anti-Spam Service for NSa 4650 (1-year)	01-SSC-4062

NSa 5650	SKU
NSa 5650 TotalSecure Advanced Edition (1-year)	01-SSC-4342
Advanced Gateway Security Suite – Capture ATP, Threat Prevention, and 24x7 Support for NSa 5650 (1-year)	01-SSC-3674
Capture Advanced Threat Protection for NSa 5650 (1-year)	01-SSC-3680
Threat Prevention – Intrusion Prevention, Gateway Anti-Virus, Gateway Anti-Spyware, Cloud Anti-Virus for NSa 5650 (1-year)	01-SSC-3698
24x7 Support for NSa 5650 (1-year)	01-SSC-3660
Content Filtering Service for NSa 5650 (1-year)	01-SSC-3692
Capture Client	Based on user count
Comprehensive Anti-Spam Service for NSa 5650 (1-year)	01-SSC-4068

NSa 6650	SKU
NSa 6650 TotalSecure Advanced Edition (1-year)	01-SSC-2209
Advanced Gateway Security Suite – Capture ATP, Threat Prevention, and 24x7 Support for NSa 6650 (1-year)	01-SSC-8761
Capture Advanced Threat Protection for NSa 6650 (1-year)	01-SSC-8930
Threat Prevention – Intrusion Prevention, Gateway Anti-Virus, Gateway Anti-Spyware, Cloud Anti-Virus for NSa 6650 (1-year)	01-SSC-8979
24x7 Support for NSa 6650 (1-year)	01-SSC-8663
Content Filtering Service for NSa 6650 (1-year)	01-SSC-8972
Capture Client	Based on user count
Comprehensive Anti-Spam Service for NSa 6650 (1-year)	01-SSC-9131

NSa 9250	SKU
NSa 9250 TotalSecure Advanced Edition (1-year)	01-SSC-2854
Advanced Gateway Security Suite – Capture ATP, Threat Prevention, and 24x7 Support for NSa 9250 (1-year)	01-SSC-0038
Capture Advanced Threat Protection for NSa 9250 (1-year)	01-SSC-0121
Threat Prevention – Intrusion Prevention, Gateway Anti-Virus, Gateway Anti-Spyware, Cloud Anti-Virus for NSa 9250 (1-year)	01-SSC-0343
24x7 Support for NSa 9250 (1-year)	01-SSC-0032
Content Filtering Service for NSa 9250 (1-year)	01-SSC-0331
Capture Client	Based on user count

Please consult with your local SonicWall reseller for a complete list of supported SFP and SFP+ modules

SonicWall NSa/NSv Firewall Bundle

The following NSa series firewalls are eligible to receive a one-year license to the corresponding NSv Virtual Appliance TotalSecure Subscription* at no additional cost.

Eligible NSa Firewall	Corresponding NSv Firewall
NSa 5650	NSv 200
NSa 6650	NSv 200
NSa 9250	NSv 400
NSa 9450	NSv 400
NSa 9650	NSv 400

* *NSv Virtual Appliance TotalSecure Subscription includes NSv virtual firewall, Gateway Anti-Virus, Anti-Spyware, Intrusion Prevention and Application Firewall Service, Content Filtering Service and 24x7 Support.*

Regulatory model numbers:

NSa 2650 - 1RK38-0C8
NSa 3650 - 1RK38-0C7
NSa 4650 - 1RK39-0C9
NSa 5650 - 1RK39-0CA
NSa 6650 - 1RK39-0CB
NSa 9250 - 1RK39-0CC
NSa 9450 - 1RK39-0CD
NSa 9650 - 1RK39-0CE

About SonicWall

SonicWall delivers Boundless Cybersecurity for the hyper-distributed era and a work reality where everyone is remote, mobile and unsecure. By knowing the unknown, providing real-time visibility and enabling breakthrough economics, SonicWall closes the cybersecurity business gap for enterprises, governments and SMBs worldwide. For more information, visit www.sonicwall.com

SONICWALL®

SonicOS Platform

The SonicOS architecture is at the core of every SonicWall physical and virtual firewall including the TZ, NSa, NSv and SuperMassive Series. SonicOS leverages our patented*, single-pass, low-latency, Reassembly-Free Deep Packet Inspection® (RFDPI) and patent-pending Real-Time Deep Memory Inspection™ (RTDMI) technologies to deliver industry-validated high security effectiveness, SD-WAN, real-time visualization, high-speed virtual private networking (VPN) and other robust security features.

Firewall features

REASSEMBLY-FREE DEEP PACKET INSPECTION (RFDPI) ENGINE	
Feature	**Description**
Reassembly-Free Deep Packet Inspection (RFDPI)	This high-performance, proprietary and patented inspection engine performs stream-based, bi-directional traffic analysis, without proxying or buffering, to uncover intrusion attempts and malware and to identify application traffic regardless of port.
Bi-directional inspection	Scans for threats in both inbound and outbound traffic simultaneously to ensure that the network is not used to distribute malware and does not become a launch platform for attacks in case an infected machine is brought inside.
Stream-based inspection	Proxy-less and non-buffering inspection technology provides ultra-low latency performance for DPI of millions of simultaneous network streams without introducing file and stream size limitations, and can be applied on common protocols as well as raw TCP streams.
Highly parallel and scalable	The unique design of the RFDPI engine works with the multi-core architecture to provide high DPI throughput and extremely high new session establishment rates to deal with traffic spikes in demanding networks.
Single-pass inspection	A single-pass DPI architecture simultaneously scans for malware, intrusions and application identification, drastically reducing DPI latency and ensuring that all threat information is correlated in a single architecture.

FIREWALL AND NETWORKING	
Feature	**Description**
Secure SD-WAN	An alternative to more expensive technologies such as MPLS, Secure SD-WAN enables distributed enterprise organizations to build, operate and manage secure, high-performance networks across remote sites for the purpose of sharing data, applications and services using readily-available, low-cost public internet services.
REST API	Allows the firewall to receive and leverage any and all proprietary, original equipment manufacturer and third-party intelligence feeds to combat advanced threats such as zero-day, malicious insider, compromised credentials, ransomware and advanced persistent threats.
Stateful packet inspection	All network traffic is inspected, analyzed and brought into compliance with firewall access policies.
High availability/clustering	Supports Active/Passive (A/P) with state synchronization, Active/Active (A/A) DPI2 and Active/Active clustering high availability modes.2 Active/Active DPI offloads the deep packet inspection load to passive appliance to boost throughput.
DDoS/DoS attack protection	SYN flood protection provides a defense against DOS attacks using both Layer 3 SYN proxy and Layer 2 SYN blacklisting technologies. Additionally, it protects against DOS/DDoS through UDP/ICMP flood protection and connection rate limiting.
Flexible deployment options	The firewall can be deployed in wire, network tap NAT or Layer 2 bridge2 modes.

FIREWALL AND NETWORKING (CONTINUED)

Feature	Description
WAN load balancing	Load-balances multiple WAN interfaces using Round Robin, Spillover or Percentage methods. Policy-based routing Creates routes based on protocol to direct traffic to a preferred WAN connection with the ability to fail back to a secondary WAN in the event of an outage.
Advanced quality of service (QoS)	Guarantees critical communications with 802.1p, DSCP tagging and remapping of VoIP traffic on the network.
H.323 gatekeeper and SIP proxy support	Blocks spam calls by requiring that all incoming calls are authorized and authenticated by H.323 gatekeeper or SIP proxy.
Single and cascaded Dell N-Series and X-Series switch management2	Manage security settings of additional ports, including Portshield, HA, PoE and PoE+, under a single pane of glass using the firewall management dashboard for Dell's N-Series and X-Series network switches.
Biometric authentication	Supports mobile device authentication such as fingerprint recognition that cannot be easily duplicated or shared to securely authenticate the user identity for network access.
Open authentication and social login	Enable guest users to use their credential from social networking service such as Facebook, Twitter, or Google+ to sign in and access the Internet and other guest services through a host's wireless, LAN or DMZ zones using pass-through authentication.
Multi-domain authentication	Provides a simple and fast way to administer security polices across all network domains. Manage individual policy to a single domain or group of domains.

MANAGEMENT AND REPORTING

Feature	Description
Cloud-based and on-premises management	Configuration and management of SonicWall appliances is available via the cloud through the SonicWall Capture Security Center and on-premises using SonicWall Global Management System (GMS).
Powerful single device management	An intuitive web-based interface allows quick and convenient configuration, in addition to a comprehensive command-line interface and support for SNMPv2/3.
IPFIX/NetFlow application flow reporting	Exports application traffic analytics and usage data through IPFIX or NetFlow protocols for real-time and historical monitoring and reporting with tools such as SonicWall Analytics or other tools that support IPFIX and NetFlow with extensions.

VIRTUAL PRIVATE NETWORKING (VPN)

Feature	Description
Auto-provision VPN	Simplifies and reduces complex distributed firewall deployment down to a trivial effort by automating the initial site-to-site VPN gateway provisioning between SonicWall firewalls while security and connectivity occurs instantly and automatically.
IPSec VPN for site-to-site connectivity	High-performance IPSec VPN allows the firewall to act as a VPN concentrator for thousands of other large sites, branch offices or home offices.
SSL VPN or IPSec client remote access	Utilizes clientless SSL VPN technology or an easy-to-manage IPSec client for easy access to email, files, computers, intranet sites and applications from a variety of platforms.
Redundant VPN gateway	When using multiple WANs, a primary and secondary VPN can be configured to allow seamless, automatic failover and failback of
Route-based VPN	The ability to perform dynamic routing over VPN links ensures continuous uptime in the event of a temporary VPN tunnel failure, by seamlessly re-routing traffic between endpoints through alternate routes.

CONTENT/CONTEXT AWARENESS

Feature	Description
User activity tracking	User identification and activity are made available through seamless AD/LDAP/Citrix/Terminal Services SSO integration combined with extensive information obtained through DPI.
GeoIP country traffic identification	Identifies and controls network traffic going to or coming from specific countries to either protect against attacks from known or suspected origins of threat activity, or to investigate suspicious traffic originating from the network. Ability to create custom country and Botnet lists to override an incorrect country or Botnet tag associated with an IP address. Eliminates unwanted filtering of IP addresses due to misclassification.
Regular expression matching and filtering	Prevents data leakage by identifying and controlling content crossing the network through regular expression matching.

Breach prevention subscription services

CAPTURE ADVANCED THREAT PROTECTION[1]

Feature	Description
Multi-engine sandboxing	The multi-engine sandbox platform, which includes virtualized sandboxing, full system emulation and hypervisor level analysis technology, executes suspicious code and analyzes behavior, providing comprehensive visibility to malicious activity.
Block until verdict	To prevent potentially malicious files from entering the network, files sent to the cloud for analysis can be held at the gateway until a verdict is determined.
Broad file type analysis	Supports analysis of a broad range of file types, including executable programs (PE), DLL, PDFs, MS Office documents, archives, JAR and APK plus multiple operating systems including Windows, Android, Mac OS and multi-browser environments.
Rapid deployment of signatures	When a file is identified as malicious, a signature is immediately deployed to firewalls with SonicWALL Capture subscriptions and Gateway Anti-Virus and IPS signature databases and the URL, IP and domain reputation databases within 48 hours.
Capture Client	Capture Client uses a static artificial intelligence (AI) engine to determine threats before they can execute and rollback to a previous uninfected state.

ENCRYPTED THREAT PREVENTION

Feature	Description
TLS/SSL decryption and inspection	Decrypts and inspects TLS/SSL encrypted traffic on the fly, without proxying, for malware, intrusions and data leakage, and applies application, URL and content control policies in order to protect against threats hidden inside of encrypted traffic. Included with security subscriptions for all models except SOHO. Sold as a separate license on SOHO.
SSH inspection	Deep packet inspection of SSH (DPI-SSH) decrypts and inspects data traversing over SSH tunnels to prevent attacks that leverage SSH.

INTRUSION PREVENTION[1]

Feature	Description
Countermeasure-based protection	Tightly integrated intrusion prevention system (IPS) leverages signatures and other countermeasures to scan packet payloads for vulnerabilities and exploits, covering a broad spectrum of attacks and vulnerabilities.
Automatic signature updates	The SonicWall Threat Research Team continuously researches and deploys updates to an extensive list of IPS countermeasures that covers more than 50 attack categories. The new updates take immediate effect without any reboot or service interruption required.
Intra-zone IPS protection	Bolsters internal security by segmenting the network into multiple security zones with intrusion prevention, preventing threats from propagating across the zone boundaries.
Botnet command and control (CnC) detection and blocking	Identifies and blocks command and control traffic originating from bots on the local network to IPs and domains that are identified as propagating malware or are known CnC points.
Protocol abuse/anomaly	Identifies and blocks attacks that abuse protocols as they attempt to sneak past the IPS.
Zero-day protection	Protects the network against zero-day attacks with constant updates against the latest exploit methods and techniques that cover thousands of individual exploits.
Anti-evasion technology	Extensive stream normalization, decoding and other techniques ensure that threats do not enter the network undetected by utilizing evasion techniques in Layers 2-7.

THREAT PREVENTION[1]

Feature	Description
Gateway anti-malware	The RFDPI engine scans all inbound, outbound and intra-zone traffic for viruses, Trojans, key loggers and other malware in files of unlimited length and size across all ports and TCP streams.
Capture Cloud malware protection	A continuously updated database of tens of millions of threat signatures resides in the SonicWall cloud servers and is referenced to augment the capabilities of the onboard signature database, providing RFDPI with extensive coverage of threats.
Around-the-clock security updates	New threat updates are automatically pushed to firewalls in the field with active security services, and take effect immediately without reboots or interruptions.
Bi-directional raw TCP inspection	The RFDPI engine scans raw TCP streams on any port and bi-directionally to detect and prevent both inbound and outbond threats.
Extensive protocol support	Identifies common protocols such as HTTP/S, FTP, SMTP, SMBv1/v2 and others, which do not send data in raw TCP. Decodes payloads for malware inspection, even if they do not run on standard, well-known ports.

APPLICATION INTELLIGENCE AND CONTROL[1]

Feature	Description
Application control	Controls applications, or individual application features that are identified by the RFDPI engine against a continuously expanding database of over thousands of application signatures. This increases network security and enhances network productivity.
Custom application identification	Controls custom applications by creating signatures based on specific parameters or patterns unique to an application in its network communications. This helps gain further control over the network.
Application bandwidth management	Application bandwidth management granularly allocates and regulates available bandwidth for critical applications (or application categories), while inhibiting nonessential application traffic.
Granular control	Controls applications (or specific components of an application) based on schedules, user groups, exclusion lists and a range of actions with full SSO user identification through LDAP/AD/Terminal Services/Citrix integration.

CONTENT FILTERING[1]

Feature	Description
Inside/outside content filtering	Enforce acceptable use policies and block access to HTTP/HTTPS websites containing information or images that are objectionable or unproductive with Content Filtering Service and Content Filtering Client.
Enforced content filtering client	Extends policy enforcement to block internet content for Windows, Mac OS, Android and Chrome devices located outside the firewall perimeter.
Granular controls	Blocks content using any combination of categories. Filtering can be scheduled by time of day, such as during school or business hours, and applied to individual users or groups.
Web caching	URL ratings are cached locally on the SonicWall firewall so that the response time for subsequent access to frequently visited sites is only a fraction of a second.
Local CFS Responder	Local CFS Responder can be deployed as a virtual appliance in private clouds based on VMWare or Microsoft Hyper-V. This provides deployment flexibility option (Light weight VM) of CFS ratings database in various customer network use cases that require a dedicated on premise solution that speeds up CFS ratings request and response times, supports large number of allowed/blocked URL list (+100K), and adds up to 1000 SonicWall firewalls for CFS rating lookups.

ENFORCED ANTI-VIRUS AND ANTI-SPYWARE[1]

Feature	Description
Multi-layered protection	Utilizes the firewall capabilities as the first layer of defense at the perimeter, coupled with endpoint protection to block viruses entering the network through laptops, thumb drives and other unprotected systems.
Automated enforcement option	Ensure every computer accessing the network has the appropriate antivirus software and/or DPI-SSL certificate installed and active, eliminating the costs commonly associated with desktop antivirus management.
Automated deployment and installation option	Machine-by-machine deployment and installation of anti-virus and anti-spyware clients is automatic across the network, minimizing administrative overhead.
Next-generation antivirus	Capture Client uses a static artificial intelligence (AI) engine to determine threats before they can execute and roll back to a previous uninfected state.
Spyware protection	Powerful spyware protection scans and blocks the installation of a comprehensive array of spyware programs on desktops and laptops before they transmit confidential data, providing greater desktop security and performance.

[1] *Requires added subscription*
[2] *Not supported NSv firewall series*

SonicOS feature summary

Firewall

- Stateful packet inspection
- Reassembly-Free Deep Packet Inspection
- DDoS attack protection (UDP/ICMP/SYN flood)
- IPv4/IPv6 support
- Biometric authentication for remote access
- DNS proxy
- REST APIs

TLS/SSL/SSH decryption and inspection[2]

- Deep packet inspection for TLS/SSL/SSH
- Inclusion/exclusion of objects, groups or hostnames
- SSL control
- Granular DPI SSL controls per zone or rule

Capture advanced threat protection[2]

- Real-Time Deep Memory Inspection
- Cloud-based multi-engine analysis
- Virtualized sandboxing
- Hypervisor level analysis
- Full system emulation
- Broad file type examination
- Automated & manual submission
- Real-time threat intelligence updates
- Block until verdict
- Capture Client

Intrusion prevention[2]

- Signature-based scanning
- Automatic signature updates
- Bi-directional inspection engine
- Granular IPS rule capability
- GeoIP enforcement
- Botnet filtering with dynamic list
- Regular expression matching

Anti-malware[2]

- Stream-based malware scanning
- Gateway anti-virus
- Gateway anti-spyware
- Bi-directional inspection
- No file size limitation
- Cloud malware database

Application identification[2]

- Application control
- Application bandwidth management
- Custom application signature creation
- Data leakage prevention
- Application reporting over NetFlow/IPFIX
- Comprehensive application signature database

Traffic visualization and analytics

- User activity
- Application/bandwidth/threat usage
- Cloud-based analytics

HTTP/HTTPS Web content filtering[2]

- URL filtering
- Proxy avoidance
- Keyword blocking
- Policy-based filtering (exclusion/inclusion)
- HTTP header insertion
- Bandwidth manage CFS rating categories
- Unified policy model with app control
- Content Filtering Client

VPN

- Secure SD-WAN
- Auto-provision VPN
- IPSec VPN for site-to-site connectivity
- SSL VPN and IPSec client remote access
- Redundant VPN gateway
- Mobile Connect for iOS, Mac OS X, Windows, Chrome, Android and Kindle Fire
- Route-based VPN (RIP/OSPF/BGP)

Networking

- PortShield
- Jumbo frames
- Path MTU discovery
- Enhanced logging
- VLAN trunking
- Port mirroring (NSa 2650 and above)
- Layer-2 QoS
- Port security
- Dynamic routing (RIP/OSPF/BGP)
- SonicWall wireless controller1
- Policy-based routing (ToS/metric and ECMP)
- NAT
- DHCP server
- Bandwidth management
- Link aggregation[1] (static and dynamic)
- Port redundancy[1]
- A/P high availability with state sync
- A/A clustering1
- Inbound/outbound load balancing
- L2 bridge,1 wire/virtual wire mode, tap mode, NAT mode
- 3G/4G WAN failover[1]
- Asymmetric routing
- Common Access Card (CAC) support

VoIP

- Granular QoS control
- Bandwidth management
- DPI for VoIP traffic
- H.323 gatekeeper and SIP proxy support

[1] *Not supported on NSv Series firewalls*
[2] *Requires added subscription.*

SONICWALL®

SonicOS feature summary (continued)

Management and monitoring

- Web GUI
- Command-line interface (CLI)
- SNMPv2/v3
- Centralized management and reporting with SonicWall Global Management System (GMS)[2]
- Logging
- Netflow/IPFix exporting
- Cloud-based configuration backup
- BlueCoat security analytics platform
- Application and bandwidth visualizer
- IPv4 and IPv6 Management
- Off-box reporting (Scrutinizer)
- LCD management screen[1]
- Dell N-Series and X-Series switch management including cascaded switches[1]

Wireless[1]

- SonicWave AP cloud management
- WIDS/WIPS
- Rogue AP prevention
- Fast roaming (802.11k/r/v)
- 802.11s mesh networking
- Auto-channel selection
- RF spectrum analysis
- Floor plan view
- Topology view
- Band steering
- Beamforming
- AirTime fairness
- Bluetooth Low Energy
- MiFi extender
- Guest cyclic quota
- LHM guest portal

Integrated Wireless (TZ Series only)

- Dual-band (2.4 GHz and 5.0 GHz)
- 802.11 a/b/g/n/ac wireless standards
- Wireless intrusion detection and prevention
- Wireless guest services
- Lightweight hotspot messaging
- Virtual access point segmentation
- Captive portal
- Cloud ACL

About SonicWall

SonicWall has been fighting the cybercriminal industry for over 27 years defending small and medium businesses, enterprises and government agencies worldwide. Backed by research from SonicWall Capture Labs, our award- winning, real-time breach detection and prevention solutions secure more than a million networks, and their emails, applications and data, in over 215 countries and territories. These organizations run more effectively and fear less about security. For more information, visit www.sonicwall.com or follow us on Twitter, LinkedIn, Facebook and Instagram.

SONICWALL

SONICWALL GLOBAL MANAGEMENT SYSTEM

Comprehensive security management, monitoring, reporting and analytics

A winning security management strategy demands deep understanding of the security environment to promote better policy coordination and decisions. Not having an enterprise-wide view of the full security construct often leaves organizations at risk to preventable cyber-attacks and compliance violations. Using numerous tools running on different platforms and reporting data in different formats make security analytics and reporting operationally inefficient. This further impairs the organization's ability to quickly recognize and respond to security risks. Organizations must establish a systematic approach to governing the network security environment to overcome these challenges.

SonicWall Global Management System (GMS) solves these challenges. GMS integrates management and monitoring, analytics, forensics and audit reporting. This forms the foundation of a security governance, compliance and risk management strategy. The feature-rich GMS platform gives distributed enterprises, service providers and other organizations a fluid, holistic approach to unifying all operational aspects of their security environment. With GMS, security teams can easily manage SonicWall firewall, wireless access point, email security and secure mobile access solutions, as well as third-party network switch solutions. This is all done via a controlled and auditable work-stream process to keep networks sharp, safe and compliant. GMS includes centralized policy management and enforcement, real-time event monitoring, granular data analytics and reporting, audit trails, and more, under a unified management platform.

Benefits:

- Establishes a unified security governance, compliance and risk management security program
- Adopts a coherent and auditable approach to security orchestration, forensics, analytics and reporting
- Reduces risk and provide a fast response to security events
- Provides an enterprise-wide view of the security ecosystem
- Automates workflows and assures security operation compliance
- Operationalize firewalls at remote and branch offices in four easy steps with Zero-Touch Deployment
- Provisions, manages and monitors SD-WAN deployment, connectivity and performance centrally
- Reports on HIPAA, SOX, and PCI for internal and external auditors
- Deploys fast and easy with software, virtual appliance or cloud deployment options — all at a low cost

GOVERNS CENTRALLY

- Establish an easy path to comprehensive security management, analytic reporting and compliance to unify your network security defense program
- Automate and correlate workflows to form a fully coordinated security governance, compliance and risk management strategy

COMPLIANCE

- Helps make regulatory bodies and auditors happy with automatic PCI, HIPAA and SOX security reports
- Customize any combination of security auditable data to help you move towards specific compliance regulations

RISK MANAGEMENT

- Move fast and drive collaboration, communication and knowledge across the shared security framework
- Make informed security policy decisions based on time-critical and consolidated threat information for higher level of security efficiency

GMS provides a holistic approach to security governance, compliance and risk management

Workflow Automation

Employing native workflow automation, GMS helps security operations conform to firewall policy change management and auditing requirements of various regulatory laws such as PCI, HIPPA and GDPR. It enables policy changes by applying a series of rigorous procedures for configuring, comparing, validating, reviewing and approving firewall policies prior to deployment. The approval groups are flexible to comply with varying authorization and audit procedures from different types of organizations. Workflow automation programmatically deploys sanctioned security policies to improve operational efficiency, mitigate risks and eliminate errors.

GMS provides a holistic approach to security governance, compliance and risk management.

1. CONFIGURE AND COMPARE

GMS configures policy **change orders** and **color-codes** differences for clear comparisons

2. VALIDATE

GMS performs an integrity **validation of the policy's** logic

3. REVIEW & APPROVE

GMS emails reviewers and logs a **(dis)approval audit trail** of the policy

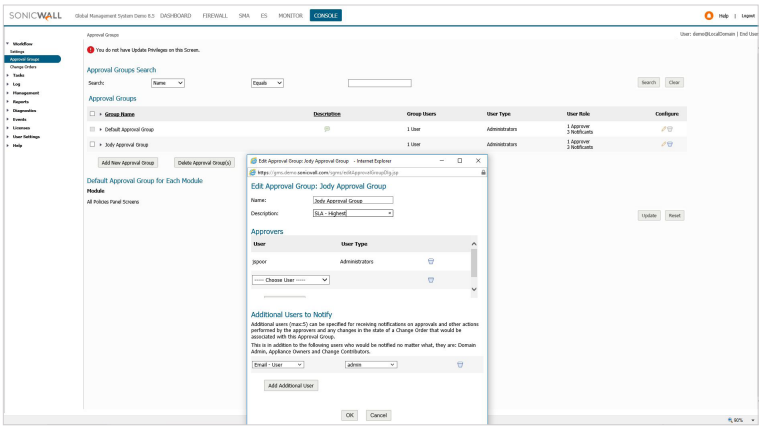
4. DEPLOY

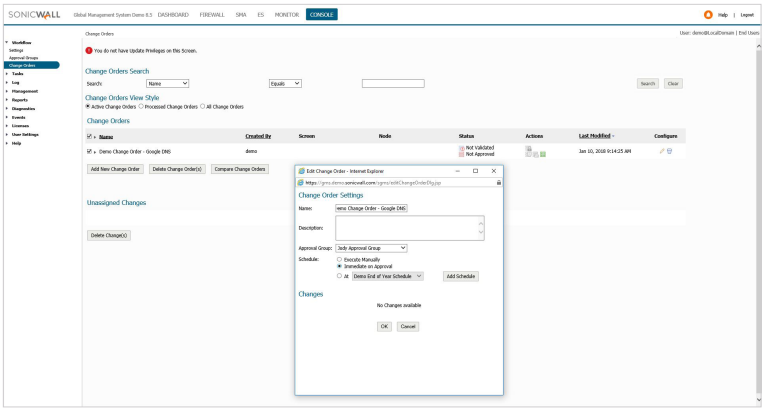
GMS deploys the policy changes immediately or **on a schedule**

5. AUDIT

The change logs enable accurate policy **auditing** and precise **compliance** data

GMS Workflow Automation: Five steps to error-free policy management





Partner Enabled Services

Need help to plan, deploy or optimize your SonicWall solution? SonicWall Advanced Services Partners are trained to provide you with world class professional services. Learn more at www.sonicwall.com/PES.

SONICWALL®

Zero-Touch Deployment

Integrated into GMS is the Zero-Touch Deployment service, which simplifies and speeds the provisioning process for SonicWall firewalls at remote and branch office locations. The process requires minimal user intervention and is fully automated to operationalize firewalls at scale in four easy deployment steps. This significantly reduces the time, cost and complexity associated with installation and configuration, while security and connectivity occur instantly and automatically.

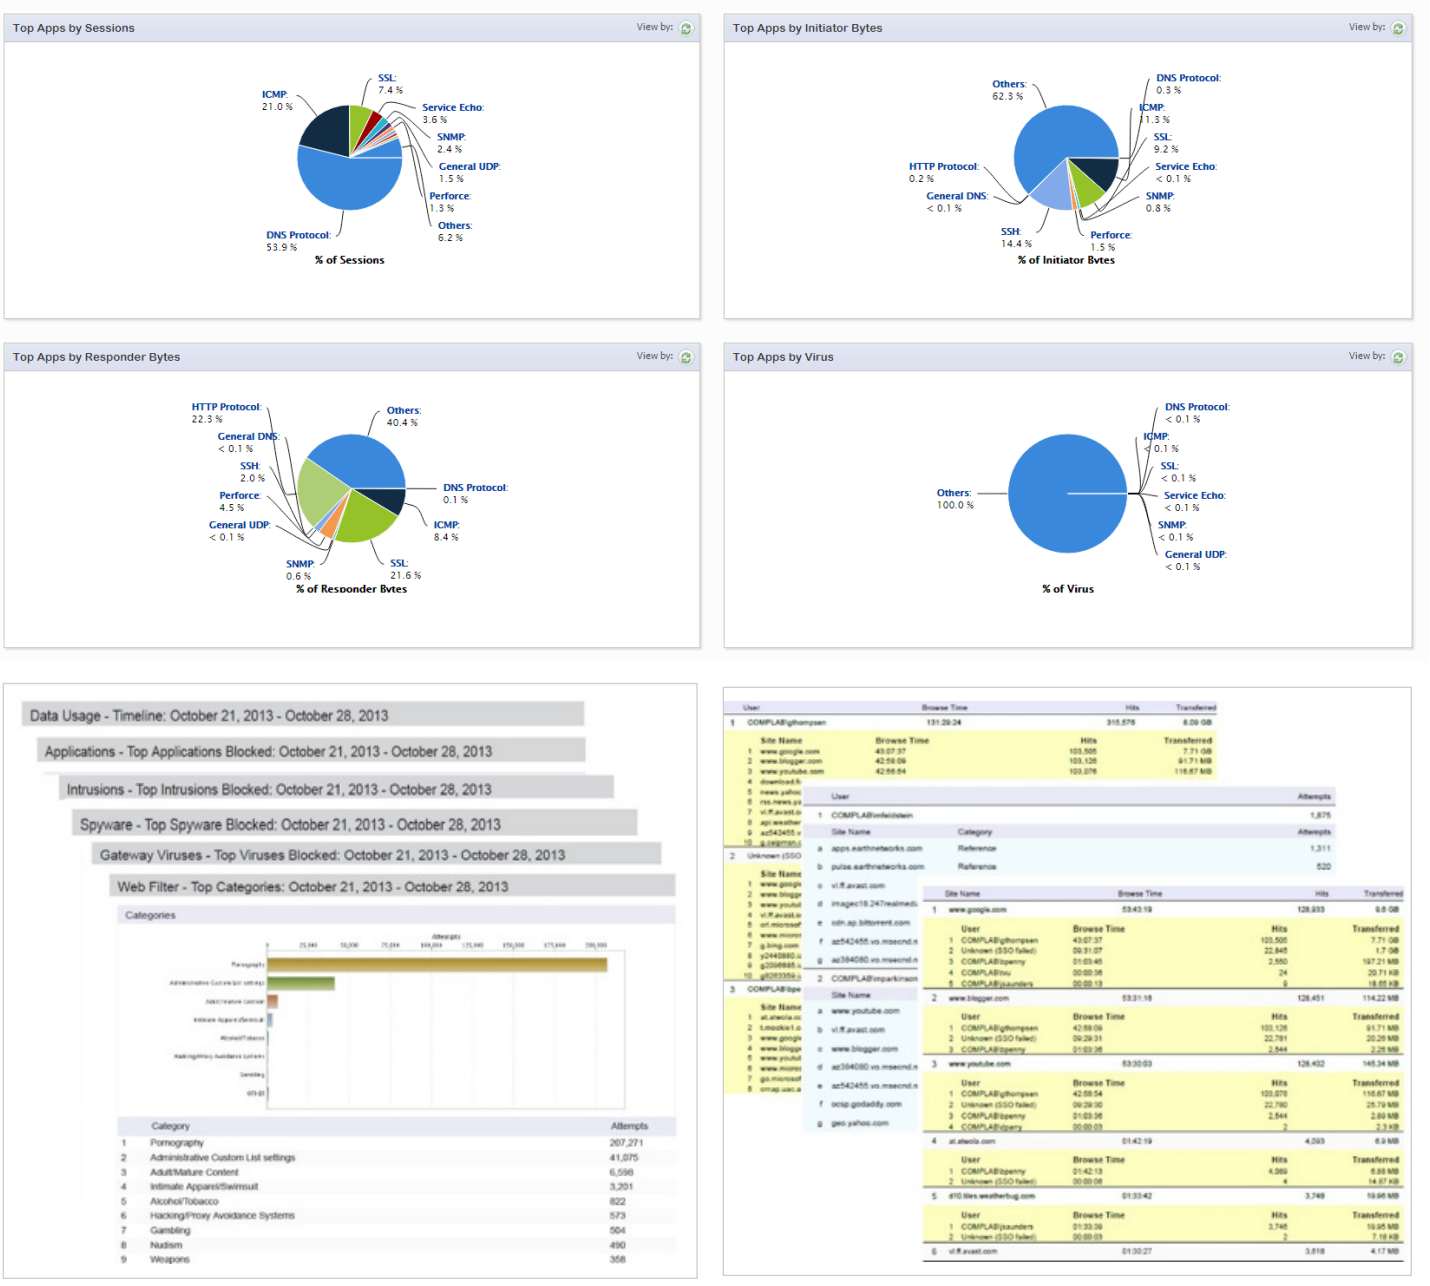
STEP 1	**REGISTER THE FIREWALL** Registers the new firewall in MySonicWall using its assigned serial number and authentication code.
STEP 2	**CONNECT THE FIREWALL** Connects the firewall to the network using the ethernet cable that came with the unit.
STEP 3	**POWER UP THE FIREWALL** Power up the firewall after connecting the power cable and plugging it into a standard wall outlet. Units are automatically assigned a WAN IP using DHCP server. Once connectivity is established, the unit is automatically discovered, authenticated, and added to Capture Security Center with all licensed and configurations synchronized with MySonicWall and License Manager.
STEP 4	**MANAGE THE FIREWALL** The unit is now operational and managed via the Capture Security Center cloud-based central management console such as firmware upgrades, security patching, and group level configuration changes.

Zero-Touch Deployment: Operationalize firewall in four easy steps

Reporting

GMS offers over 140 pre-defined reports as well as the flexibility to create custom reports using any combination of auditable data to acquire various use case outcomes. These outcomes include big-picture and detailed awareness of network events, user activities, threats, operational and performance issues, security efficacy, risks and security gaps, compliance readiness, and even post-mortem analysis. Every report is designed, with the collective input from many years of SonicWall customer and partner collaborations. This provides the deep granularity, scope and knowledge of syslog and IPFIX/NetFlow data needed to track, measure and run an effective network and security operation.

Intuitive graphical reports simplify managed appliance monitoring. Administrators can easily identify traffic anomalies based on usage data for a specific timeline, initiator, responder or service. They can also export reports to a Microsoft® Excel® spreadsheet, portable document format (PDF) file or directly to a printer for regular business review.

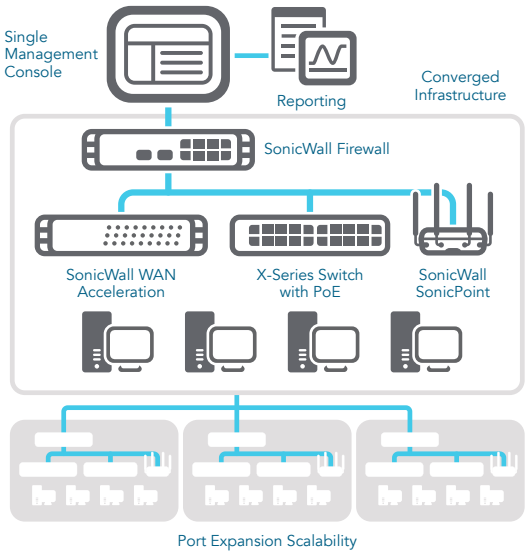


Security management and monitoring features	
Feature	Description
Centralized security and network management	Helps administrators deploy, manage and monitor a distributed network security environment.
Federate policy configuration	Easily sets policies for thousands of SonicWall firewalls, wireless access points, email security, secure remote access devices and switches from a central location.
Change Order Management and Work Flow	Assures the correctness and compliance of policy changes by enforcing a process for configuring, comparing, validating, reviewing and approving policies prior to deployment. The approval groups are user-configurable for adherence to company security policy. All policy changes are logged in an auditable form that ensures the firewall complies with regulatory requirements. All granular details of any changes made are historically preserved to help with compliance, audit trailing, and troubleshooting.
Zero-Touch Deployment	Simplifies and speeds the deployment and provisioning of SonicWall firewalls remotely using the cloud. Automatically pushes policies; performs firmware upgrades; and synchronizes licenses.
SD-WAN Provisioning	Centrally provision, manage and monitor SD-WAN deployment and connectivity with ease across a distributed enterprise environment.
Sophisticated VPN deployment and configuration	Simplifies the enablement of VPN connectivity, and consolidates thousands of security policies.
Offline management	Enables scheduling of configurations and firmware updates on managed appliances to minimize service disruptions.
Streamlined license management	Simplifies appliance management via a unified console, as well as the management of security and support license subscriptions.
Universal dashboard	Features customizable widgets, geographic maps and user-centric reporting.
Active-device monitoring and alerting	Provides real-time alerts with integrated monitoring capabilities, and facilitates troubleshooting efforts, thus allowing administrators to take preventative action and deliver immediate remediation.
SNMP support	Provides powerful, real-time traps for all Transmission Control Protocol/Internet Protocol (TCP/IP) and SNMP-enabled devices and applications, greatly enhancing troubleshooting efforts to pinpoint and respond to critical network events.
Application Visualization and Intelligence	Shows historic and real-time reports of what applications are being used, and by which users. Reports are completely customizable using intuitive filtering and drill-down capabilities.
Rich integration options	Provides application programming interface (API) for web services, command line interface (CLI) support for the majority of functions, and SNMP trap support for both service providers and enterprises.
Dell Networking X-Series switch management	Dell X-Series switches can now be managed easily within TZ, NSA and SuperMassive series firewalls to offer single-pane-of-glass management of the entire network security infrastructure.
Closed Network Support	Deploy GMS in closed environments, such as highly protected government networks. All license keysets and signature files from SonicWall backend services are packaged, encrypted and securely transferred to the local file system, where GMS can access, upload and then push required updates to all managed security appliances.
Security reporting and analytics	
Feature	Description
Botnet Report	Includes four report types: Attempts, Targets, Initiators, and Timeline containing attack vector context such as Botnet ID, IP Addresses, Countries, Hosts, Ports, Interfaces, Initiator/Target, Source/Destination, and User.
Geo IP Report	Contains information on blocked traffic that is based on the traffic's country of origin or destination. Includes four report types: Attempts, Targets, Initiators, and Timeline containing attack vector context such as Botnet ID, IP Addresses, Countries, Hosts, Ports, Interfaces, Initiator/Target, Source/Destination, and User

Security reporting and analytics (continued)	
Feature	Description
MAC Address Report	Shows the Media Access Control (MAC) address on the report page. Includes device-specific information (Initiator MAC and Responder MAC) in five report types: • Data Usage > Initiators • Data Usage > Responders • Data Usage > Details • User Activity > Details • Web Activity > Initiators
Capture ATP Report	Shows detail threat behavior information to respond to a threat or infection.
HIPPA, PCI and SOX reports	Includes pre-defined PCI, HIPAA and SOX report templates to satisfy security compliance audits.
Rogue Wireless Access Point Reporting	Shows all wireless devices in use as well as rogue behavior from ad-hoc or peer-to-peer networking between hosts and accidental associations for users connecting to neighboring rogue networks.
Flow analytics and reports	Provides a flow reporting agent for application traffic analytics and usage data through IPFIX or NetFlow protocols for real-time and historical monitoring. Offers administrators an effective and efficient interface to visually monitor their network in real-time, providing the ability to identify applications and websites with high bandwidth demands, view application usage per user and anticipate attacks and threats encountered by the network. • A Real-Time Viewer with drag and drop customization • A Real-Time Report screen with one-click filtering • A Top Flows Dashboard with one-click View By buttons • A Flow Reports screen with five additional flow attribute tabs • A Flow Analytics screen with powerful correlation and pivoting features • A Session Viewer for deep drill-downs of individual sessions and packets.
Intelligent reporting and activity visualization	Provides comprehensive management and graphical reports for SonicWall firewalls, email security and secure mobile access devices. Enables greater insight into usage trends and security events while delivering a cohesive branding for service providers.
Centralized logging	Offers a central location for consolidating security events and logs for thousands of appliances, providing a single point to conduct network forensics.
Real-time and historic next-generation syslog reporting	Through a revolutionary enhancement in architecture, streamlines the time-consuming summarization process, allowing for near real-time reporting on incoming syslog messages. Also provides the ability to drill down into data and customize reports extensively.
Universal scheduled reports	Schedules reports that are automatically created and mailed out across multiple appliances of various types to authorized recipients.
Application traffic analytics	Provides organizations with powerful insight into application traffic, bandwidth utilization and security threats, while providing powerful troubleshooting and forensics capabilities.
Authentication security	
Feature	Description
Account lockout	Account lockout policy disables a GMS user account if incorrect passwords are entered after a specified number of allowed attempts during a given period. This helps prevent attackers from guessing users' passwords and reducing the chance of successful attacks gaining unauthorized access to protected assets and data on the network.
Password Complexity	The password complexity policy sets the minimum guidelines considered important for a strong password to log in and access the GMS system.
Admin access to specific address range	Customers will be able to control admin access to specific IP address ranges.

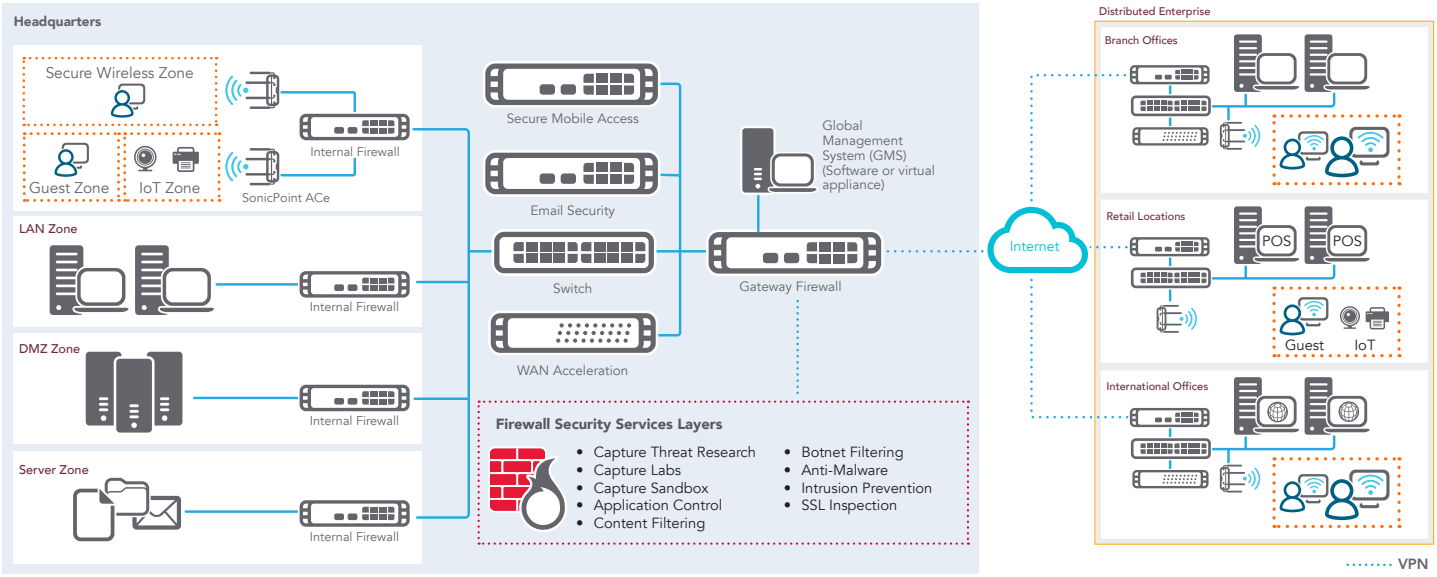
Scalable distributed architecture

GMS is an on-premises solution, deployable as a software or a virtual appliance. At the core of GMS is a distributed architecture that facilitates limitless system availability and scalability. A single instance of GMS can add visibility and control over thousands of your network security devices under its management, regardless of location. At the customer-facing level, its highly interactive universal dashboards, loaded with real-time monitoring, reporting, and analytics data, help guide smart security policy decisions, and drive collaboration, communication and knowledge across the shared security framework. With an enterprise-wide view of the security environment and real-time security intelligence reaching the right people in the organization, accurate security policies and controls actions can be made towards attaining a stronger adaptive security posture.



SonicWall Global Management System (GMS)

On-premise GMS provides a complete and scalable security management, analytic and reporting platform for distributed enterprises and data centers.



On-Premise SonicWall Global Management System Environments

SONICWALL®

Feature summary

Reporting

- Comprehensive Set of Graphical Reports
- Compliance Reporting
- Customizable Reporting with Drill Down Capabilities
- Centralized Logging
- Multi-threat Reporting
- User-centric Reporting
- Application Usage Reporting
- Granular Services Reporting
- New Attack Intelligence
- Bandwidth and Services Report per Interface
- Reporting for SonicWall Firewall Appliances
- Reporting for SonicWall SRA SSL VPN Appliances
- Universal Scheduled Reports
- Next-generation Syslog and IPFIX Reporting
- Flexible and Granular Near Real-Time Reporting
- Per User Bandwidth Reporting
- Client VPN Activity Reporting
- Detailed Summary of Services over VPN Report
- Rogue Wireless Access Point Reporting SRA SMB Web Application Firewall (WAF) Reporting

Management

- Ubiquitous Access
- Alerts and Notifications
- Diagnostic Tools
- Multiple Concurrent User Sessions
- Offline Management and Scheduling
- Management of Security Firewall Policies
- Management of Security VPN Policies
- Management of Email Security Policies
- Management of Secure Remote Access/SSL VPN Policies
- Management of Value Added Security Services
- Define Policy Templates at the Group Level
- Policy Replication from Device to a Group of Devices
- Policy Replication from Group Level to a Single Device
- Redundancy and High Availability
- Provisioning Management
- Scalable and Distributed Architecture
- Dynamic Management Views
- Unified License Manager
- Command Line Interface (CLI)
- Web Services Application Programming Interface (API)
- Role Based Management (Users, Groups)
- Universal Dashboard
- Backup of preference files for firewall appliances
- SD-WAN
- Zero-Touch Deployment
- Closed network support
- Firewall Sandwich support

Monitoring

IPFIX Data Flows in Real time

SNMP Support

Active Device Monitoring and Alerting

SNMP Relay Management

VPN and Firewall Status Monitoring

Live Syslog Monitoring and Alerting

Authentication Security

Account lockout

Password Complexity

Admin access to specific address range

Minimum system requirements

Below are the minimum requirements for SonicWall GMS with respect to the operating systems, databases, drivers, hardware and SonicWall-supported appliances:

Operating system[1]

- Windows Server 2016
- Windows Server 2012 Standard 64-bit
- Windows Server 2012 R2 Standard 64-bit (English and Japanese language versions)
- Windows Server 2012 R2 Datacenter

Hardware requirements

- Use the GMS Capacity Calculator to determine the hardware requirements for your deployment.

Virtual appliance requirements

- **Hypervisor:** ESXi 6.5, 6.0 or 5.5
- Use the GMS Capacity Calculator to determine the hardware requirements for your deployment.

VMware Hardware Compatibility Guide:
www.vmware.com/resources/compatibility/search.php

Supported databases

- **External databases:** Microsoft SQL Server 2012 and 2014
- **Bundled with the GMS application:** MySQL

Internet browsers

- Microsoft® Internet Explorer 11.0 or higher (do not use compatibility mode)
- Mozilla Firefox 37.0 or higher
- Google Chrome 42.0 or higher Safari (latest version)

Supported SonicWall appliances managed by GMS

- **SonicWall Network Security Appliances:** SuperMassive E10000 and 9000 Series, E-Class NSA, NS*a* Series, and TZ Series appliances®
- **SonicWall Network Security Virtual Appliances:** NSv Series
- **SonicWall Secure Mobile Access (SMA) appliances:** SMA Series and E-Class SRA
- SonicWall Email Security appliances
- All TCP/IP and SNMP-enabled devices and applications for active monitoring

About Us

SonicWall has been fighting the cybercriminal industry for over 27 years, defending small, medium-sized businesses and enterprises worldwide. Our combination of products and partners has enabled an automated real-time breach detection and prevention solution tuned to the specific needs of the more than 500,000 organizations in over 215 countries and territories, so you can do more business with less fear. For more information, visit **www.sonicwall.com** or follow us on Twitter, LinkedIn, Facebook and Instagram.

SONICWALL

SonicWall TZ series

Integrated threat prevention and SD-Branch platform for small/medium organizations and distributed enterprises

The SonicWall TZ series enables small to mid-size organizations and distributed enterprises realize the benefits of an integrated security solution that checks all the boxes. Combining high-speed threat prevention and software-defined wide area networking (SD-WAN) technology with an extensive range of networking and wireless features plus simplified deployment and centralized management, the TZ series provides a unified security solution at a low total cost of ownership.

Flexible, integrated security solution

The foundation of the TZ series is SonicOS, SonicWall's feature-rich operating system. Firewalls supporting the latest SonicOS 7.0 OS, features new modern-look UI/UX, advanced security, networking and simplified policy management capabilities.

SonicOS further includes a powerful set of capabilities that provides organizations with the flexibility to tune these Unified Threat Management (UTM) firewalls to their specific network requirements. For example, creating a secure high-speed wireless network is simplified through a built-in wireless controller which supports IEEE 802.11 standards or by adding our SonicWave 802.11ac Wave 2 access points. To reduce the cost and complexity of connecting high-speed wireless access points and other Power over Ethernet (PoE)-enabled devices such as IP cameras, phones and printers, the TZ300P, TZ600P and TZ570P provide PoE/PoE+ power.

Distributed retail businesses and campus environments can take advantage of the many tools in SonicOS to gain even greater benefits. Branch locations are able to exchange information securely with the central office using virtual private networking (VPN). Creating virtual LANs (VLANs) enables segmentation of the network into separate corporate and customer groups with rules that determine the level of communication with devices on other VLANs. SD-WAN offers a secure alternative to costly MPLS circuits while delivering consistent application performance and availability. Deploying TZ firewalls to remote locations is easy using Zero-Touch Deployment which enables provisioning of the firewall remotely through the cloud.

Superior threat prevention and performance

Our vision for securing networks in today's continually-evolving cyber threat landscape is automated, real-time threat detection and prevention. Through a combination of cloud-based and on-box technologies we deliver protection to our firewalls that's been validated by independent third-party testing for its extremely high security effectiveness. Unknown threats are sent to SonicWall's cloud-based Capture Advanced Threat Protection (ATP) multi-engine sandbox for analysis. Enhancing Capture ATP is our patent-pending Real-Time Deep Memory Inspection (RTDMI™) technology. The RTDMI engine detects and blocks malware

Benefits:

Flexible, integrated security solution

- Multi-gigabit interfaces in a desktop form factor
- Secure SD-Branch with SD-WAN
- Powerful SonicOS 7.0 operating system
- High-speed 802.11ac Wave 2 wireless
- Power over Ethernet (PoE/PoE+)
- 5G/4G/LTE support
- Built-in and expandable storage
- Redundant power

Superior threat prevention and performance

- Patent-pending real-time deep memory inspection technology
- Patented reassembly-free deep packet inspection technology
- TLS 1.3 support
- Industry-validated security effectiveness

Easy deployment, setup and ongoing management

- Zero-Touch Deployment
- Cloud-based and on-premises centralized management
- SonicExpress App onboarding

and zero-day threats by inspecting directly in memory. RTDMI technology is precise, minimizes false positives, and identifies and mitigates sophisticated attacks where the malware's weaponry is exposed for less than 100 nanoseconds. In combination, our patented single-pass Reassembly-Free Deep Packet Inspection (RFDPI) engine examines every byte of every packet, inspecting both inbound and outbound traffic directly on the firewall. By leveraging Capture ATP with RTDMI technology in the SonicWall Capture Cloud Platform in addition to on-box capabilities including intrusion prevention, anti-malware and web/URL filtering, TZ series firewalls stop malware, ransomware and other threats at the gateway. For mobile devices used outside the firewall perimeter, SonicWall Capture Client provides an added layer of protection by applying advanced threat protection techniques such as machine learning and system rollback. Capture Client also leverages the deep inspection of encrypted TLS traffic (DPI-SSL) on TZ series firewalls by installing and managing trusted TLS certificates.

The continued growth in the use of encryption to secure web sessions means it is imperative firewalls are able to scan encrypted traffic for threats. TZ series firewalls provide complete protection by performing full decryption and inspection of TLS/SSL and SSH encrypted connections regardless of port or protocol. The firewall searches for protocol non-compliance, threats, zero-days, intrusions, and even defined criteria by looking deep inside every packet. The deep packet inspection engine detects and prevents hidden attacks that leverage cryptography. It also blocks encrypted malware downloads, ceases the spread of infections and thwarts command and control (C&C) communications and data exfiltration. Inclusion and exclusion rules allow total control to customize which traffic is subjected to decryption and inspection based on specific organizational compliance and/or legal requirements.

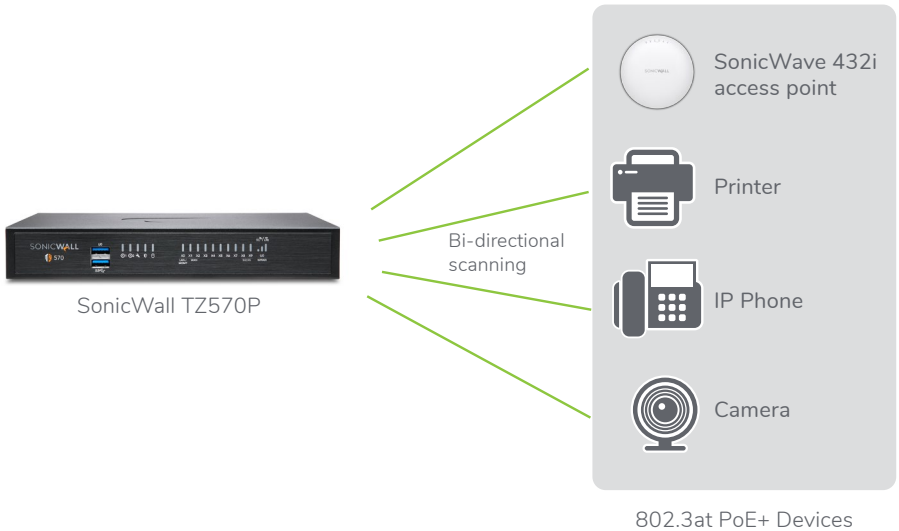
TZ670 and TZ570 provides TLS 1.3 support, which offers several changes that improves performance and security, while eliminating complexities.

Easy deployment, setup and ongoing management

SonicWall makes it easy to configure and manage TZ series firewalls and SonicWave 802.11ac Wave 2 access points no matter where you deploy them. Centralized management, reporting, licensing and analytics are handled through our cloud-based Capture Security Center which offers the ultimate in visibility, agility and capacity to centrally govern the entire SonicWall security ecosystem from a single pane of glass.

A key component of the Capture Security Center is Zero-Touch Deployment. This cloud-based feature simplifies and speeds the deployment and provisioning of SonicWall firewalls at remote and branch office locations. The process requires minimal user intervention, and is fully automated to operationalize firewalls at scale in just a few steps. This significantly reduces the time, cost and complexity associated with installation and configuration, while security and connectivity occurs instantly and automatically. Together, the simplified deployment and setup along with the ease of management enable organizations to lower their total cost of ownership and realize a high return on investment.

** 802.11ac currently not available on SOHO/SOHO 250 models; SOHO/SOHO 250 models support 802.11a/b/g/n*



Integrated Security and Power for Your PoE-enabled Devices

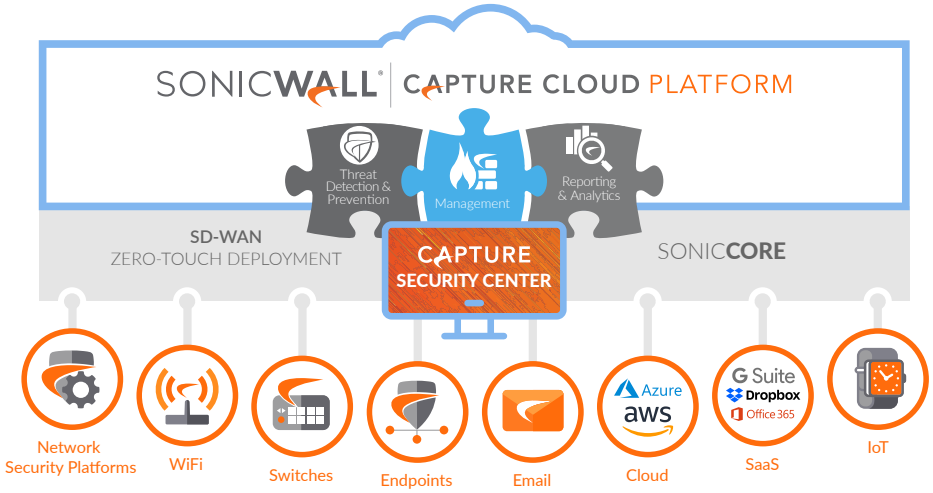
Provide power to your PoE-enabled devices without the cost and complexity of a Power over Ethernet switch or injector. TZ300P, TZ600P and TZ570P firewalls integrate IEEE 802.3at technology to power PoE and PoE+ devices such as wireless access points, cameras, IP phones and more. The firewall scans all traffic coming from and going to each device using deep packet inspection technology and then removes harmful threats such as malware and intrusions, even over encrypted connections.

Capture Cloud Platform

SonicWall's Capture Cloud Platform delivers cloud-based threat prevention and network management plus reporting and analytics for organizations of any size. The platform consolidates threat intelligence gathered from multiple sources including our award-winning multi-engine network sandboxing service, Capture Advanced Threat Protection, as well as more than 1 million SonicWall sensors located around the globe.

If data coming into the network is found to contain previously-unseen malicious code, SonicWall's dedicated, in-house Capture Labs threat research team develops signatures that are stored in the Capture Cloud Platform database and deployed to customer firewalls for up-to-date protection. New updates take effect immediately without reboots or interruptions. The signatures resident on the appliance protect against wide classes of attacks, covering tens of thousands of individual threats. In addition to the countermeasures on the appliance, TZ firewalls also have continuous access to the Capture Cloud Platform database which extends the onboard signature intelligence with tens of millions of signatures.

In addition to providing threat prevention, the Capture Cloud Platform offers single pane of glass management and administrators can easily create both real-time and historical reports on network activity.



Advanced threat protection

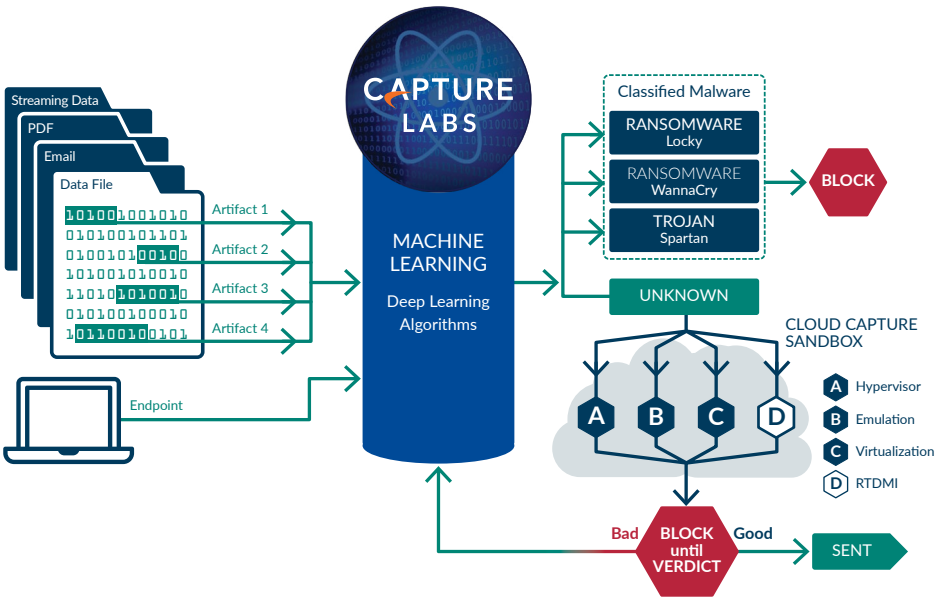
At the center of SonicWall's automated, real-time breach prevention are two advanced malware detection technologies; Capture Advanced Threat Protection™ (Capture ATP) and Capture Security appliance™ (CSa).

Capture ATP is a cloud-based multi-engine sandbox platform, which includes Real-Time Deep Memory Inspection™ (RTDMI), virtualized sandboxing, full system emulation and hypervisor level analysis technology. CSa is an on-premises device that features RTDMI, which utilizes memory-based static and dynamic techniques for fast and accurate verdicts. Both solutions extend advanced threat protection to detect and prevent zero-day threats in a variety of SonicWall solutions such as next-generation firewalls.

Suspicious files are sent to either solution where they are analyzed using deep learning algorithms with the option to hold them at the gateway until a verdict is determined. In the case of Capture ATP, when files are identified as malicious, they are blocked, and a hash is immediately created within the Capture ATP database for all customers to leverage to block follow-on attacks. These signatures are eventually sent to firewalls to create static defenses. Results generated by CSa are not shared outside your organization for privacy and compliance reasons.

These services analyze a broad range of operating systems and file types, including executable programs, DLL, PDFs, MS Office documents, archives, JAR and APK.

For complete endpoint protection, the SonicWall Capture Client combines next-generation antivirus technology with SonicWall's cloud-based multi-engine sandbox with optional integration with SonicWall firewalls.



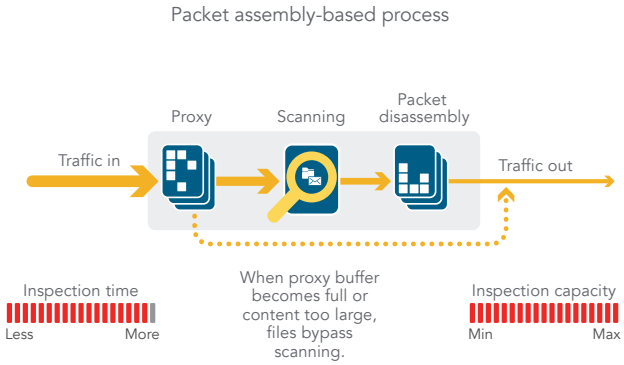
SONICWALL

Reassembly-Free Deep Packet Inspection engine

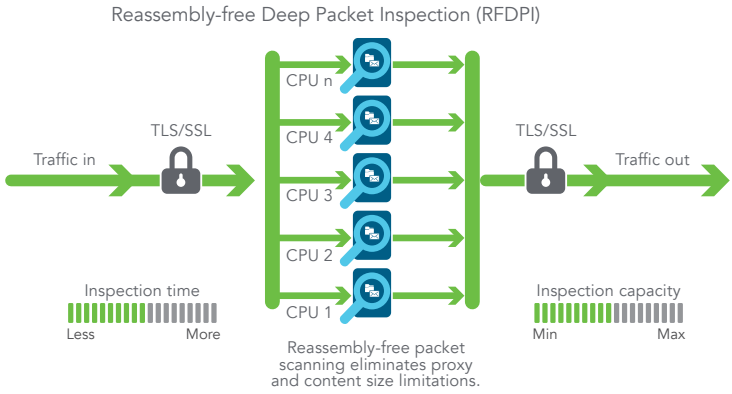
The SonicWall Reassembly-Free Deep Packet Inspection (RFDPI) is a single-pass, low latency inspection system that performs stream-based, bi-directional traffic analysis at high speed without proxying or buffering to effectively uncover intrusion attempts and malware downloads while identifying application traffic regardless of port and protocol. This proprietary engine relies on streaming traffic payload inspection to detect threats at Layers 3-7, and takes network streams through extensive and repeated normalization and decryption in order to neutralize advanced evasion techniques that seek to confuse detection engines and sneak malicious code into the network.

Once a packet undergoes the necessary pre-processing, including TLS/SSL decryption, it is analyzed against a single, proprietary memory representation of three signature databases: intrusion attacks, malware and applications. The connection state is then advanced to represent the position of the stream relative to these databases until it encounters a state of attack, or other "match" event, at which point a pre-set action is taken.

In most cases, the connection is terminated and proper logging and notification events are created. However, the engine can also be configured for inspection only or, in case of application detection, to provide Layer 7 bandwidth management services for the remainder of the application stream as soon as the application is identified.



Competitive proxy-based architecture



SonicWall stream-based architecture

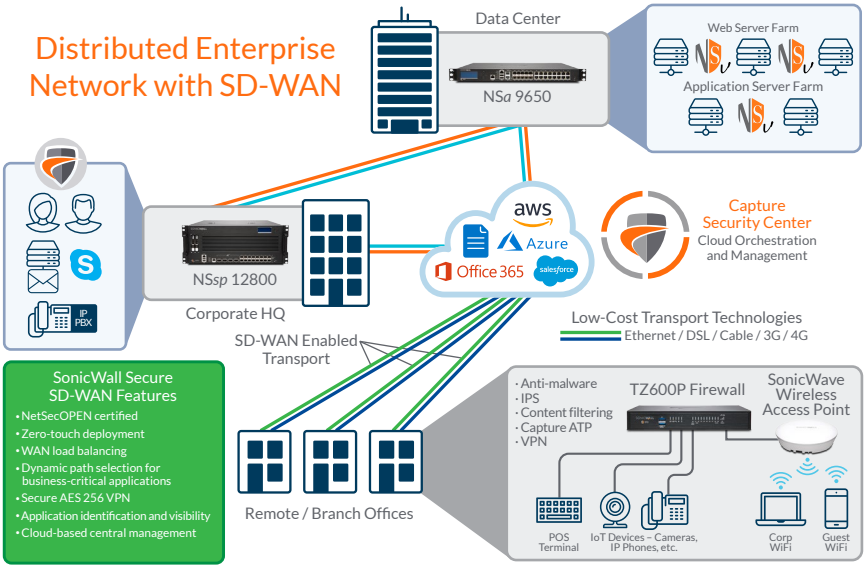
Centralized management and reporting

For highly regulated organizations wanting to achieve a fully coordinated security governance, compliance and risk management strategy, SonicWall provides administrators a unified, secure and extensible platform to manage SonicWall firewalls, wireless access points and Dell N-Series and X-Series switches through a correlated and auditable workstream process. Enterprises can easily consolidate the management of security appliances, reduce administrative and troubleshooting complexities, and govern all operational aspects of the security infrastructure, including centralized policy management and enforcement; real-time event monitoring; user activities; application identifications; flow analytics and forensics; compliance and audit reporting; and more. In addition, enterprises meet the firewall's change management requirements through workflow automation which provides the agility and confidence to deploy the right firewall policies at the right time and in conformance with compliance regulations. Available on premises as SonicWall Global Management System and in the cloud as Capture Security Center, SonicWall management and reporting solutions provide a coherent way to manage network security by business processes and service levels, dramatically simplifying lifecycle management of your overall security environments compared to managing on a device-by-device basis.

Distributed networks

Because of their flexibility, TZ series firewalls are ideally suited for both distributed enterprise and single site deployments. In distributed networks like those found in retail organizations, each site has its own TZ firewall which connects to the Internet often through a local provider using a DSL, cable or 3G/4G connection. In addition to Internet access, each firewall utilizes an Ethernet connection to transport packets between remote sites and the central headquarters. Web services and SaaS applications such as Office 365, Salesforce and others are served up from the data center. Through mesh VPN technology, IT administrators can create a hub and spoke configuration for the safe transport of data between all locations.

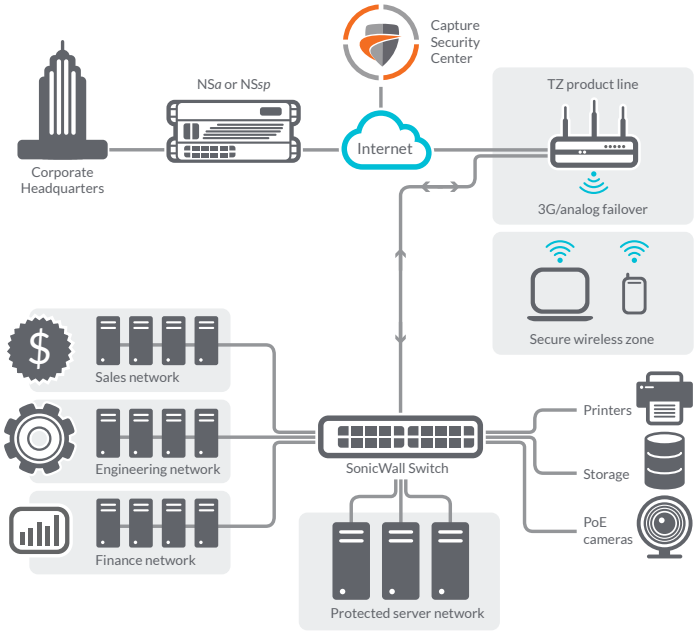
The SD-WAN technology in SonicOS is a perfect complement to TZ firewalls deployed at remote and branch sites.



Instead of relying on more expensive legacy technologies such as MPLS and T1, organizations using SD-WAN can choose lower-cost public Internet services while continuing to achieve a high level of application availability and predictable performance.

Capture Security Center

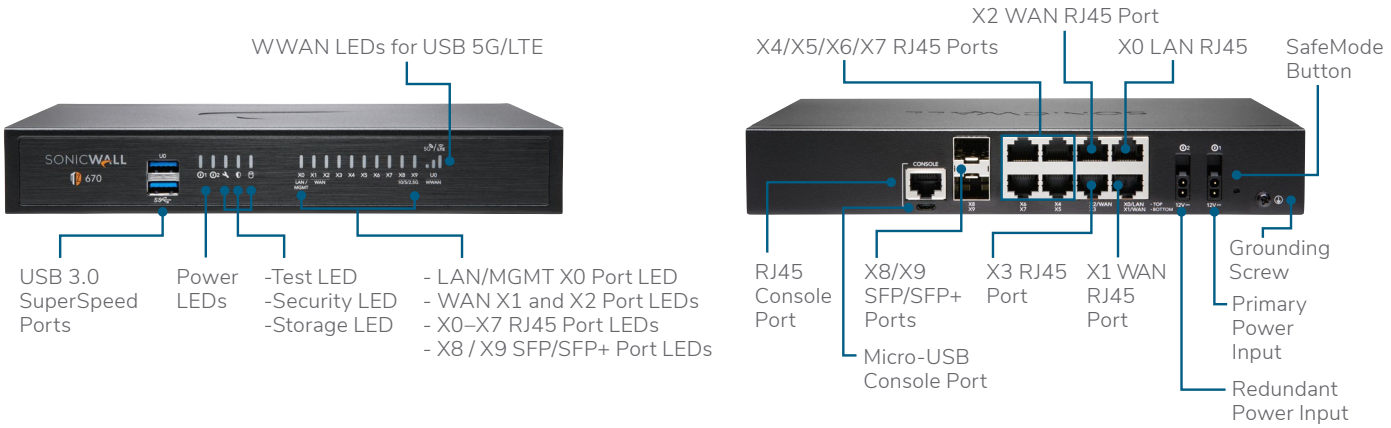
Tying the distributed network together is SonicWall's cloud-based Capture Security Center (CSC) which centralizes deployment, ongoing management and real-time analytics of the TZ firewalls. A key feature of CSC is Zero-Touch Deployment. Configuring and deploying firewalls across multiple sites is time-consuming and requires on-site personnel. However Zero-Touch Deployment removes these challenges by simplifying and speeding the deployment and provisioning of SonicWall firewalls remotely through the cloud. Similarly, CSC eases ongoing management by providing cloud-based single-pane-of-glass management for SonicWall devices on the network. For complete situational awareness of the network security environment, SonicWall Analytics offers a single-pane view into all activity occurring inside the network. Organizations gain a deeper understanding of application usage and performance while reducing the possibility of Shadow IT.



Part of CSC, SonicWall Network Security Manager (NSM), a multi-tenant centralized firewall manager, allows you to centrally manage all firewall operations error-free by adhering to auditable workflows. Its native analytic engine gives single-pane visibility and lets you monitor and uncover threats by unifying and correlating logs across all firewalls. NSM also helps you stay compliant as it provides full audit trail of every configuration changes and granular reporting. NSM scales to any size organization managing networks with up to thousands of firewall devices deployed across many locations.

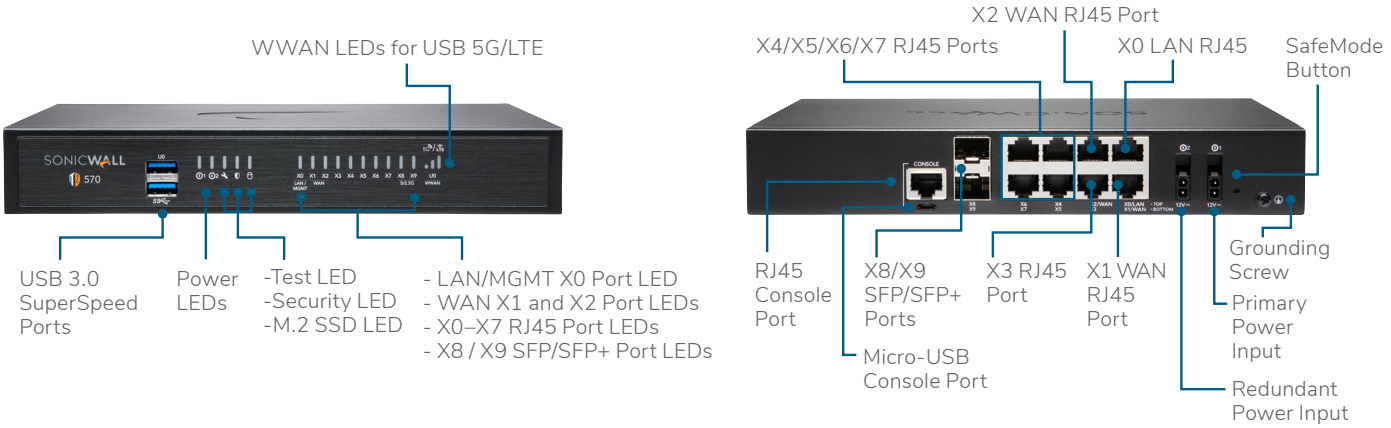
SonicWall TZ670 series

Designed for mid-sized organizations and distributed enterprise with SD-Branch locations, the TZ670 delivers industry-validated security effectiveness with best-in-class price-performance.



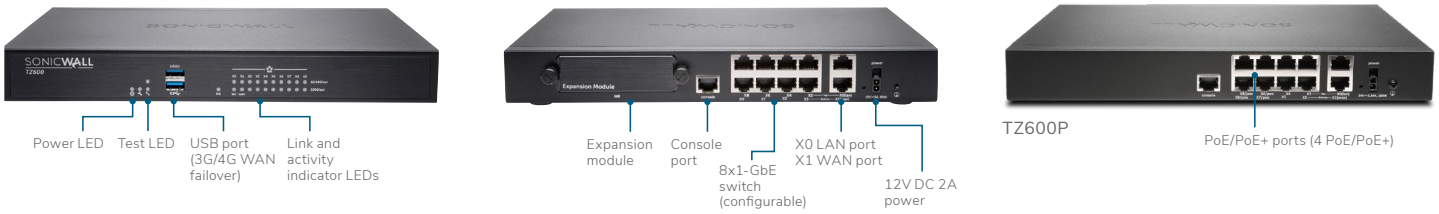
SonicWall TZ570 series

Designed for small to mid-sized organizations and distributed enterprise with SD-Branch locations, the TZ570 series deliver industry-validated security effectiveness with best-in-class price-performance.



SonicWall TZ600 series

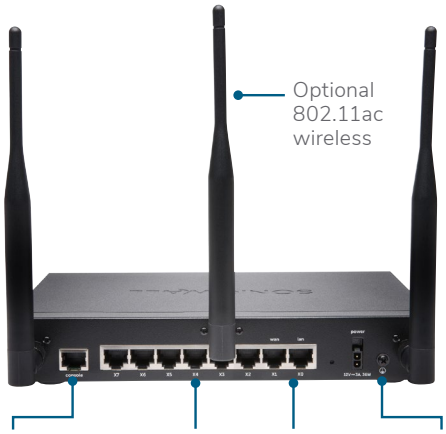
For emerging enterprises, retail and branch offices looking for security, performance and options such as 802.3at PoE+ support at a value price, the SonicWall TZ600 secures networks with enterprise-class features and uncompromising performance.



SonicWall TZ500 series

For growing branch offices and SMBs, the SonicWall TZ500 series delivers highly effective, no-compromise protection with network productivity and optional integrated 802.11ac dual-band wireless.

Power LED | Test LED | USB port (3G/4G WAN failover) | Link and activity indicator LEDs



Console port | 6x1-GbE switch (configurable) | X0 LAN port X1 WAN port | 12V DC 2A power

SonicWall TZ400 series

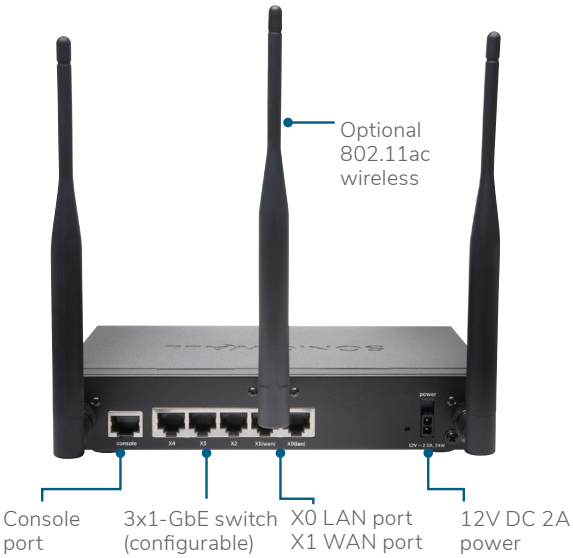
For small business, retail and branch office locations, the SonicWall TZ400 series delivers enterprise-grade protection. Flexible wireless deployment is available with optional 802.11ac dual-band wireless integrated into the firewall.

Power LED | Test LED | USB port (3G/4G WAN failover) | Link and activity indicator LEDs

Console port | 5x1-GbE switch (configurable) | X0 LAN port X1 WAN port | 12V DC 2A power

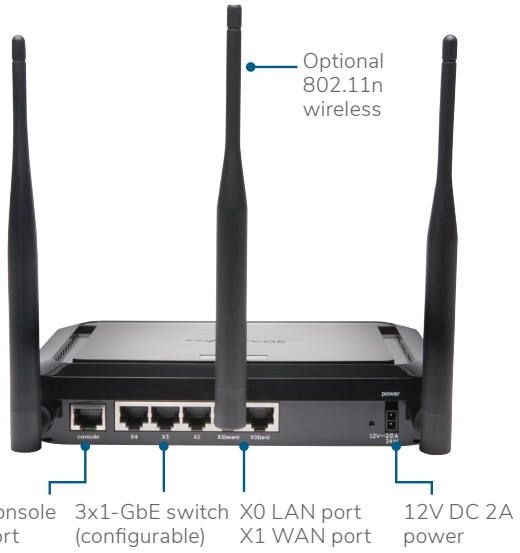
SonicWall TZ350/TZ300 series

The SonicWall TZ300 and TZ350 series offer an all-in-one solution that protects networks from advanced attacks. Unlike consumer grade products, these UTM firewalls combine high-speed intrusion prevention, anti-malware and content/URL filtering plus broad secure mobile access support for laptops, smartphones and tablets along with optional integrated 802.11ac wireless. In addition, the TZ300 offers optional 802.3at PoE+ to power PoE-enabled devices.



SonicWall SOHO 250/SOHO series

For wired and wireless small and home office environments, the SonicWall SOHO 250 and SOHO series deliver the same business-class protection large organizations require at a more affordable price point. Add optional 802.11n wireless to provide employees, customers and guests with secure wireless connectivity.



Partner Enabled Services

Need help to plan, deploy or optimize your SonicWall solution? SonicWall Advanced Services Partners are trained to provide you with world class professional services. Learn more at www.sonicwall.com/PES.

SonicOS 7.0 feature summary

Firewall
- Stateful packet inspection
- Reassembly-Free Deep Packet Inspection
- DDoS attack protection (UDP/ICMP/SYN flood)
- IPv4/IPv6 support
- Biometric authentication for remote access
- DNS proxy
- Full API support
- SonicWall Switch integration
- SD-WAN scalability
- SD-WAN Usability Wizard[1]
- SonicCoreX and SonicOS containerization[1]
- Connections scalability (SPI, DPI, DPI SSL)

Enhanced dashboard[1]
- Enhanced device view
- Top traffic and user summary
- Insights to threats
- Notification center

TLS/SSL/SSH decryption and inspection
- TLS 1.3 with enhanced security[1]
- Deep packet inspection for TLS/SSL/SSH
- Inclusion/exclusion of objects, groups or hostnames
- SSL control
- Enhancements for DPI-SSL with CFS
- Granular DPI SSL controls per zone or rule

Capture advanced threat protection[2]
- Real-Time Deep Memory Inspection
- Cloud-based multi-engine analysis
- Virtualized sandboxing
- Hypervisor level analysis
- Full system emulation
- Broad file type examination
- Automated and manual submission
- Real-time threat intelligence updates
- Block until verdict
- Capture Client

Intrusion prevention[2]
- Signature-based scanning
- Automatic signature updates
- Bi-directional inspection
- Granular IPS rule capability
- GeoIP enforcement
- Botnet filtering with dynamic list
- Regular expression matching

Anti-malware[2]
- Stream-based malware scanning
- Gateway anti-virus
- Gateway anti-spyware
- Bi-directional inspection
- No file size limitation
- Cloud malware database

Application identification[2]
- Application control
- Application bandwidth management
- Custom application signature creation
- Data leakage prevention
- Application reporting over NetFlow/IPFIX
- Comprehensive application signature database

Traffic visualization and analytics
- User activity
- Application/bandwidth/threat usage
- Cloud-based analytics

HTTP/HTTPS Web content filtering[2]
- URL filtering
- Proxy avoidance
- Keyword blocking
- Policy-based filtering (exclusion/inclusion)
- HTTP header insertion
- Bandwidth manage CFS rating categories
- Unified policy model with app control
- Content Filtering Client

VPN
- Secure SD-WAN
- Auto-provision VPN
- IPSec VPN for site-to-site connectivity
- SSL VPN and IPSec client remote access
- Redundant VPN gateway
- Mobile Connect for iOS, Mac OS X, Windows, Chrome, Android and Kindle Fire
- Route-based VPN (OSPF, RIP, BGP)

Networking
- PortShield
- Jumbo frames
- Path MTU discovery
- Enhanced logging
- VLAN trunking
- Port mirroring (NSa 2650 and above)
- Layer-2 QoS
- Port security
- Dynamic routing (RIP/OSPF/BGP)
- SonicWall wireless controller
- Policy-based routing (ToS/metric and ECMP)
- NAT
- DHCP server
- Bandwidth management
- A/P high availability with state sync
- Inbound/outbound load balancing
- High availability - Active/Standby with state sync
- L2 bridge, wire/virtual wire mode, tap mode, NAT mode
- Asymmetric routing
- Common Access Card (CAC) support

VoIP
- Granular QoS control
- Bandwidth management
- DPI for VoIP traffic
- H.323 gatekeeper and SIP proxy support

Management, monitoring and support
- Capture Security Appliance (CSa) support
- Capture Threat Assessment (CTA) v2.0
  - New design or template
  - Industry and global average comparison
- New UI/UX, Intuitive feature layout[1]
  - Dashboard
  - Device information, application, threats
  - Topology view
  - Simplified policy creation and management
- Policy/Objects usage statistics[1]
  - Used vs Un-used
  - Active vs Inactive
- Global search for static data
- Storage support[1]
- Internal and external storage management[1]
- WWAN USB card support (5G/LTE/4G/3G)
- Network Security Manager (NSM) support
- Web GUI
- Command line interface (CLI)
- Zero-Touch registration & provisioning
- CSC Simple Reporting[1]
- SonicExpress mobile app support
- SNMPv2/v3
- Centralized management and reporting with SonicWall Global Management System (GMS)[2]
- Logging
- Netflow/IPFix exporting
- Cloud-based configuration backup
- BlueCoat security analytics platform
- Application and bandwidth visualization
- IPv4 and IPv6 management
- CD management screen
- Dell N-Series and X-Series switch management including cascaded switches

Debugging and diagnostics
- Enhanced packet monitoring
- SSH terminal on UI

Wireless
- SonicWave AP cloud management
- WIDS/WIPS
- Rogue AP prevention
- Fast roaming (802.11k/r/v)
- 802.11s mesh networking
- Auto-channel selection
- RF spectrum analysis
- Floor plan view
- Topology view
- Band steering
- Beamforming
- AirTime fairness
- Bluetooth Low Energy
- MiFi extender
- RF enhancements and improvements
- Guest cyclic quota

Integrated Wireless Models
- 802.11ac Wave 2 wireless (TZ570W)
- Dual-band (2.4 GHz and 5.0 GHz)
- 802.11 a/b/g/n/ac wireless standards
- Wireless intrusion detection and prevention
- Wireless guest services
- Lightweight hotspot messaging
- Virtual access point segmentation
- Captive portal
- Cloud ACL

[1] *New feature, available on SonicOS 7.0*
[2] *Requires added subscription*

SONICWALL®

SonicWall TZ Series system specifications — SOHO, SOHO 250, TZ300 and TZ350

FIREWALL GENERAL	SOHO SERIES	SOHO 250 SERIES	TZ300 SERIES	TZ350 SERIES
Operating system	SonicOS			
Interfaces	5x1GbE, 1 USB, 1 Console		5x1GbE, 1 USB, 1 Console	5x1GbE, 1 USB, 1 Console
Power over Ethernet (PoE) support	—	—	TZ300P - 2 ports (2 PoE or 1 PoE+)	—
Expansion	USB			
Management	CLI, SSH, Web UI, Capture Security Center, GMS, REST APIs			
Single Sign-On (SSO) Users	250	350	500	500
VLAN interfaces	25			
Access points supported (maximum)	2	4	8	8
FIREWALL/VPN PERFORMANCE	**SOHO SERIES**	**SOHO 250 SERIES**	**TZ300 SERIES**	**TZ350 SERIES**
Firewall inspection throughput[1]	300 Mbps	600 Mbps	750 Mbps	1.0 Gbps
Threat Prevention throughput[2]	150 Mbps	200 Mbps	235 Mbps	335 Mbps
Application inspection throughput[2]	—	275 Mbps	375 Mbps	600 Mbps
IPS throughput[2]	200 Mbps	250 Mbps	300 Mbps	400 Mbps
Anti-malware inspection throughput[2]	150 Mbps	200 Mbps	235 Mbps	335 Mbps
TLS/SSL inspection and decryption throughput (DPI SSL)[2]	30 Mbps	50 Mbps	60 Mbps	65 Mbps
IPSec VPN throughput[3]	150 Mbps	200 Mbps	300 Mbps	430 Mbps
Connections per second	1,800	3,000	5,000	6,000
Maximum connections (SPI)	10,000	50,000	100,000	100,000
Maximum connections (DPI)	10,000	50,000	90,000	90,000
Maximum connections (DPI SSL)	250	25,000	25,000	25,000
VPN	**SOHO SERIES**	**SOHO 250 SERIES**	**TZ300 SERIES**	**TZ350 SERIES**
Site-to-site VPN tunnels	10	10	10	15
IPSec VPN clients (maximum)	1 (5)	1 (5)	1 (10)	2 (10)
SSL VPN licenses (maximum)	1 (10)	1 (25)	1 (50)	1 (75)
Virtual assist bundled (maximum)	—	1 (30-day trial)	1 (30-day trial)	1 (30-day trial)
Encryption/authentication	DES, 3DES, AES (128, 192, 256-bit), MD5, SHA-1, Suite B Cryptography			
Key exchange	Diffie Hellman Groups 1, 2, 5, 14v			
Route-based VPN	RIP, OSPF, BGP[4]			
VPN features	Dead Peer Detection, DHCP Over VPN, IPSec NAT Traversal, Redundant VPN Gateway, Route-based VPN			
Global VPN client platforms supported	Microsoft® Windows Vista 32/64-bit, Windows 7 32/64-bit, Windows 8.0 32/64-bit, Windows 8.1 32/64-bit, Windows 10			
NetExtender	Microsoft Windows Vista 32/64-bit, Windows 7, Windows 8.0 32/64-bit, Windows 8.1 32/64-bit, Mac OS X 10.4+, Linux FC3+/Ubuntu 7+/OpenSUSE			
Mobile Connect	Apple® iOS, Mac OS X, Google® Android™, Kindle Fire, Chrome, Windows 8.1 (Embedded)			
SECURITY SERVICES	**SOHO SERIES**	**SOHO 250 SERIES**	**TZ300 SERIES**	**TZ350 SERIES**
Deep Packet Inspection services	Gateway Anti-Virus, Anti-Spyware, Intrusion Prevention, DPI SSL			
Content Filtering Service (CFS)	HTTP URL, HTTPS IP, keyword and content scanning, Comprehensive filtering based on file types such as ActiveX, Java, Cookies for privacy, allow/forbid lists			
Comprehensive Anti-Spam Service	Supported			
Application Visualization	No	Yes	Yes	Yes
Application Control	Yes	Yes	Yes	Yes
Capture Advanced Threat Protection	No	Yes	Yes	Yes
NETWORKING	**SOHO SERIES**	**SOHO 250 SERIES**	**TZ300 SERIES**	**TZ350 SERIES**
IP address assignment	Static, (DHCP, PPPoE, L2TP and PPTP client), Internal DHCP server, DHCP relay			
NAT modes	1:1, 1:many, many:1, many:many, flexible NAT (overlapping IPs), PAT, transparent mode			
Routing protocols[4]	BGP[4], OSPF, RIPv1/v2, static routes, policy-based routing			
QoS	Bandwidth priority, max bandwidth, guaranteed bandwidth, DSCP marking, 802.1e (WMM)			

SonicWall TZ series specifications cont'd — SOHO, SOHO 250, TZ300 and TZ350

NETWORKING CONT'D	SOHO SERIES	SOHO 250 SERIES	TZ300 SERIES	TZ350 SERIES
Authentication	LDAP (multiple domains), XAUTH/RADIUS, SSO, Novell, internal user database		LDAP (multiple domains), XAUTH/ RADIUS, SSO, Novell, internal user database, Terminal Services, Citrix, Common Access Card (CAC)	
Local user database	150			
VoIP	Full H.323v1-5, SIP			
Standards	TCP/IP, UDP, ICMP, HTTP, HTTPS, IPSec, ISAKMP/IKE, SNMP, DHCP, PPPoE, L2TP, PPTP, RADIUS, IEEE 802.3			
Certifications[5]	FIPS 140-2 (with Suite B) Level 2, UC APL, IPv6 (Phase 2), ICSA Network Firewall, ICSA Anti-virus, Common Criteria NDPP (Firewall and IPS)

INTEGRATED WIRELESS	SOHO SERIES	SOHO 250 SERIES	TZ300 SERIES	TZ350 SERIES
Operating Channels	802.11a: US and Canada 12, Europe 11, Japan 4, Singapore 4, Taiwan 4; 802.11b/g: US and Canada 1-11, Europe 1-13, Japan 1-14 (14-802.11b only); 802.11n (2.4 GHz): US and Canada 1-11, Europe 1-13, Japan 1-13; 802.11n (5 GHz): US and Canada 36-48/149-165, Europe 36-48, Japan 36-48, Spain 36-48/52-64;		802.11a: US and Canada 12, Europe 11, Japan 4, Singapore 4, Taiwan 4; 802.11b/g: US and Canada 1-11, Europe 1-13, Japan 1-14 (14-802.11b only); 802.11n (2.4 GHz): US and Canada 1-11, Europe 1-13, Japan 1-13; 802.11n (5 GHz): US and Canada 36-48/149-165, Europe 36-48, Japan 36-48, Spain 36-48/52-64; 802.11ac: US and Canada 36-48/149-165, Europe 36-48, Japan 36-48, Spain 36-48/52-64	
Transmit output power	Based on the regulatory domain specified by the system administrator			
Transmit power control	Supported			
Data rates supported	802.11a: 6, 9, 12, 18, 24, 36, 48, 54 Mbps per channel; 802.11b: 1, 2, 5.5, 11 Mbps per channel; 802.11g: 6, 9, 12, 18, 24, 36, 48, 54 Mbps per channel; 802.11n: 7.2, 14.4, 21.7, 28.9, 43.3, 57.8, 65, 72.2, 15, 30, 45, 60, 90, 120, 135, 150 Mbps per channel		802.11a: 6, 9, 12, 18, 24, 36, 48, 54 Mbps per channel; 802.11b: 1, 2, 5.5, 11 Mbps per channel; 802.11g: 6, 9, 12, 18, 24, 36, 48, 54 Mbps per channel; 802.11n: 7.2, 14.4, 21.7, 28.9, 43.3, 57.8, 65, 72.2, 15, 30, 45, 60, 90, 120, 135, 150 Mbps per channel; 802.11ac: 7.2, 14.4, 21.7, 28.9, 43.3, 57.8, 65, 72.2, 86.7, 96.3, 15, 30, 45, 60, 90, 120, 135, 150, 180, 200, 32.5, 65, 97.5, 130, 195, 260, 292.5, 325, 390, 433.3, 65, 130, 195, 260, 390, 520, 585, 650, 780, 866.7 Mbps per channel	
Modulation technology spectrum	802.11a: Orthogonal Frequency Division Multiplexing (OFDM); 802.11b: Direct Sequence Spread Spectrum (DSSS); 802.11g: Orthogonal Frequency Division Multiplexing (OFDM)/Direct Sequence Spread Spectrum (DSSS); 802.11n: Orthogonal Frequency Division Multiplexing (OFDM)		802.11a: Orthogonal Frequency Division Multiplexing (OFDM); 802.11b: Direct Sequence Spread Spectrum (DSSS); 802.11g: Orthogonal Frequency Division Multiplexing (OFDM)/Direct Sequence Spread Spectrum (DSSS); 802.11n: Orthogonal Frequency Division Multiplexing (OFDM); 802.11ac: Orthogonal Frequency Division Multiplexing (OFDM)	

*Future use

[1] Testing Methodologies: Maximum performance based on RFC 2544 (for firewall). Actual performance may vary depending on network conditions and activated services.

[2] Threat Prevention/GatewayAV/Anti-Spyware/IPS throughput measured using industry standard Spirent WebAvalanche HTTP performance test and Ixia test tools. Testing done with multiple flows through multiple port pairs. Threat Prevention throughput measured with Gateway AV, Anti-Spyware, IPS and Application Control enabled. DPI SSL performance measured on HTTPS traffic with IPS enabled.

[3] VPN throughput measured using UDP traffic at 1280 byte packet size adhering to RFC 2544. All specifications, features and availability are subject to change.

[4] BGP is available only on SonicWall TZ350, TZ400, TZ500 and TZ600.

[5] Pending FIPS and ICSA approval on SOHO 250 and TZ350

[6] All TZ integrated wireless models can support either 2.4GHz or 5GHz band. For dual-band support, please use SonicWall's wireless access point products

SonicWall TZ series system specifications — TZ400, TZ500 and TZ600

FIREWALL GENERAL	TZ400 SERIES	TZ500 SERIES	TZ600 SERIES
Operating system		SonicOS	
Interfaces	7x1GbE, 1 USB, 1 Console	8x1GbE, 2 USB, 1 Console	10x1GbE, 2 USB, 1 Console, 1 Expansion Slot
Power over Ethernet (PoE) support	—	—	TZ600P - 4 ports (4 PoE or 4 PoE+)
Expansion	USB	2 USB	Expansion Slot (Rear)*, 2 USB
Management	CLI, SSH, Web UI, Capture Security Center, GMS, REST APIs		
Single Sign-On (SSO) Users	500	500	500
VLAN interfaces	50	50	50
Access points supported (maximum)	16	16	24

SonicWall TZ series specifications — TZ570 and TZ670

FIREWALL GENERAL	TZ570 SERIES	TZ670 SERIES
Operating system	SonicOS 7.0	
Interfaces	8x1GbE, 2x5GbE, 2 USB 3.0, 1 Console	8x1GbE, 2x10GbE, 2 USB 3.0, 1 Console
Power over Ethernet (PoE) support	TZ570P (5 PoE or 3PoE+)	—
Expansion	Storage Expansion Slot (Up to 256GB)	Storage Expansion Slot (Up to 256GB) (32GB included)
Management	Network Security Manager, CLI, SSH, Web UI, GMS, REST APIs	
Single Sign-On (SSO) Users	2,500	2,500
VLAN interfaces	256	256
Access points supported (maximum)	32	32
FIREWALL/VPN PERFORMANCE	**TZ570 SERIES**	**TZ670 SERIES**
Firewall inspection throughput[1]	4.00 Gbps	5.00 Gbps
Threat Prevention throughput[2]	2.00 Gbps	2.50 Gbps
Application inspection throughput[2]	2.5 Gbps	3.0 Gbps
IPS throughput[2]	2.5 Gbps	3.0 Gbps
Anti-malware inspection throughput[2]	2.00 Gbps	2.50 Gbps
TLS/SSL inspection and decryption throughput (DPI SSL)[2]	750 Mbps	800 Mbps
IPSec VPN throughput[3]	1.80 Gbps	2.10 Gbps
Connections per second	16,000	25,000
Maximum connections (SPI)	1,250,000	1,500,000
Maximum connections (DPI)	400,000	500,000
Maximum connections (DPI SSL)	30,000	30,000
VPN	**TZ570 SERIES**	**TZ670 SERIES**
Site-to-site VPN tunnels	200	250
IPSec VPN clients (maximum)	10 (500)	10 (500)
SSL VPN licenses (maximum)	2 (200)	2 (250)
Encryption/authentication	DES, 3DES, AES (128, 192, 256-bit)/MD5, SHA-1, Suite B Cryptography	
Key exchange	Diffie Hellman Groups 1, 2, 5, 14v	
Route-based VPN	RIP, OSPF, BGP	
VPN features	Dead Peer Detection, DHCP Over VPN, IPSec NAT Traversal, Redundant VPN Gateway, Route-based VPN	
Global VPN client platforms supported	Microsoft® Windows 10	
NetExtender	Microsoft® Windows 10, Linux	
Mobile Connect	Apple® iOS, Mac OS X, Google® Android™, Kindle Fire, Chrome OS, Windows 10	
SECURITY SERVICES	**TZ570 SERIES**	**TZ670 SERIES**
Deep Packet Inspection services	Gateway Anti-Virus, Anti-Spyware, Intrusion Prevention, DPI SSL	
Content Filtering Service (CFS)	HTTP URL, HTTPS IP, keyword and content scanning, Comprehensive filtering based on file types such as ActiveX, Java, Cookies for privacy, allow/forbid lists	
Comprehensive Anti-Spam Service	Yes	
Application Visualization	Yes	
Application Control	Yes	
Capture Advanced Threat Protection	Yes	
DNS Security	Yes	

SonicWall TZ series specifications cont'd — TZ570 and TZ670

NETWORKING	TZ570 SERIES	TZ670 SERIES
IP address assignment	Static, (DHCP, PPPoE, L2TP and PPTP client), Internal DHCP server, DHCP relay	
NAT modes	1:1, 1:many, many:1, many:many, flexible NAT (overlapping IPs), PAT, transparent mode	
Routing protocols	BGP, OSPF, RIPv1/v2, static routes, policy-based routing	
QoS	Bandwidth priority, max bandwidth, guaranteed bandwidth, DSCP marking, 802.1e (WMM)	
Authentication	LDAP (multiple domains), XAUTH/RADIUS, SSO, Novell, internal user database, Terminal Services, Citrix, Common Access Card (CAC)	
Local user database	250	
VoIP	Full H.323v1-5, SIP	
Standards	TCP/IP, UDP, ICMP, HTTP, HTTPS, IPSec, ISAKMP/IKE, SNMP, DHCP, PPPoE, L2TP, PPTP, RADIUS, IEEE a802.3	
Certifications pending	FIPS 140-2 (with Suite B) Level 2, IPv6 (Phase 2), ICSA Network Firewall, ICSA Anti-virus, Common Criteria NDPP (Firewall and IPS)	

HARDWARE	TZ570 SERIES	TZ670 SERIES
Form Factor	Desktop[5]	
Power supply	60W external 180W external (TZ570P only)	60W external
Maximum power consumption (W)	13.1	13.1
Input Voltage & Frequency	100-240 VAC, 50-60 Hz	100-240 VAC, 50-60 Hz
Total heat dissipation	45.9 / 60.5 BTU	55.1 BTU
Dimensions	3.5 x 15 x 22.5 (cm) 1.38 x 5.91 x 8.85 in	3.5 x 15 x 22.5 (cm) 1.38 x 5.91 x 8.85 in
Weight	0.97 kg / 2.14 lbs	0.97 kg / 2.14 lbs
WEEE weight	1.42 kg / 3.13 lbs	1.42 kg / 3.13 lbs
Shipping weight	1.93 kg / 4.25 lbs	1.93 kg / 4.25 lbs
MTBF @25°C in years	26.1	43.9
Environment (Operating/Storage)	32°-105° F (0°-40° C)/-40° to 158° F (-40° to 70° C)	
Humidity	5-95% non-condensing	

REGULATORY	TZ570 SERIES	TZ670 SERIES
Major regulatory compliance (wired models - TZ670, TZ570)	FCC Class B, FCC , ICES Class B, CE (EMC, LVD, RoHS), C-Tick, VCCI Class B, UL/cUL, TUV/GS, CB, Mexico DGN notice by UL, WEEE, REACH, BSMI, KCC/MSIP, ANATEL	FCC Class B, FCC , ICES Class B, CE (EMC, LVD, RoHS), C-Tick, VCCI Class B, UL/cUL, TUV/GS, CB, Mexico DGN notice by UL, WEEE, REACH, BSMI, KCC/MSIP, ANATEL
Major regulatory compliance (wireless models - TZ570W)	FCC Class B, FCC P15C, FCC P15E, ICES Class B, ISED/IC, CE (RED, RoHS), C-Tick, VCCI Class B, Japan Wireless, UL/cUL, TUV/GS, CB, Mexico DGN notice by UL, WEEE, REACH, BSMI, NCC (TW) KCC/MSIP, SRRC, ANATEL	—
Major regulatory compliance (PoE models - TZ570P)	FCC Class A, ICES Class A, CE (EMC, LVD, RoHS), C-Tick, VCCI Class A, UL/cUL, TUV/GS, CB, Mexico DGN notice by UL, WEEE, REACH, BSMI, KCC/MSIP, ANATEL	—

SonicWall TZ series specifications cont'd — TZ570 and TZ670

INTEGRATED WIRELESS	TZ570 SERIES	TZ670 SERIES
Standards	802.11a/b/g/n/ac (WEP, WPA, WPA2, 802.11i, TKIP, PSK,02.1x, EAP-PEAP, EAP-TTLS	—

Data rates supported	802.11a: 6, 9, 12, 18, 24, 36, 48, 54 Mbps per channel; 802.11b: 1, 2, 5.5, 11 Mbps per channel; 802.11g: 6, 9, 12, 18, 24, 36, 48, 54 Mbps per channel; 802.11n: 7.2, 14.4, 21.7, 28.9, 43.3, 57.8, 65, 72.2, 15, 30, 45, 60, 90, 120, 135, 150 Mbps per channel; 802.11ac: 7.2, 14.4, 21.7, 28.9, 43.3, 57.8, 65, 72.2, 86.7, 96.3, 15, 30, 45, 60, 90, 120, 135, 150, 180, 200, 32.5, 65, 97.5, 130, 195, 260, 292.5, 325, 390, 433.3, 65, 130, 195, 260, 390, 520, 585, 650, 780, 866.7 Mbps per channel	—
Modulation technology spectrum	802.11a: Orthogonal Frequency Division Multiplexing (OFDM); 802.11b: Direct Sequence Spread Spectrum (DSSS); 802.11g: Orthogonal Frequency Division Multiplexing (OFDM)/Direct Sequence Spread Spectrum (DSSS); 802.11n: Orthogonal Frequency Division Multiplexing (OFDM); 802.11ac: Orthogonal Frequency Division Multiplexing (OFDM)	—

[1]Testing Methodologies: Maximum performance based on RFC 2544 (for firewall). Actual performance may vary depending on network conditions and activated services.
[2]Threat Prevention/GatewayAV/Anti-Spyware/IPS throughput measured using industry standard Spirent WebAvalanche HTTP performance test and Ixia test tools. Testing done with multiple flows through multiple port pairs. Threat Prevention throughput measured with Gateway AV, Anti-Spyware, IPS and Application Control enabled. DPI SSL performance measured on HTTPS traffic with IPS enabled.
[3]VPN throughput measured using UDP traffic at 1280 byte packet size adhering to RFC 2544. All specifications, features and availability are subject to change.
[4]For rack mount, separate rack mount kit available.
[5]All TZ integrated wireless models can support either 2.4GHz or 5GHz band. For dual-band support, please use SonicWall's wireless access point products.

About SonicWall

SonicWall delivers Boundless Cybersecurity for the hyper-distributed era and a work reality where everyone is remote, mobile and unsecure. By knowing the unknown, providing real-time visibility and enabling breakthrough economics, SonicWall closes the cybersecurity business gap for enterprises, governments and SMBs worldwide. For more information, visit www.sonicwall.com.

SONICWALL NETWORK SECURITY ADMINISTRATOR (SNSA) TECHNICAL GUIDE

SonicWall Network Security Administrator Course Description

SonicWall offers an extensive technical training curriculum for network administrators, security experts and SonicWall partners who need to enhance their knowledge and maximize their investment in SonicWall products and security applications.

The SonicWall Network Security Administrator (SNSA) training curriculum is designed to teach students specific SonicWall network security technology. The course will provide students with the skills to successfully implement and configure SonicWall firewall appliances and security services. SonicWall recommends this course for networking professionals responsible for the daily operation of one or more security appliances.

Once you have completed the **SonicWall Network Security Administrator course**, you are eligible to take the **SonicWall Network Security Administrator exam**.

Course Overview:

- Two days of instructor-led classroom training — 80 percent hands-on labs and 20 percent lecture
- Six hours of online learning pre-requisite modules
- Based on the recently released SonicOS 6.5 firmware

NEW! How can you register for the SonicWall Network Security Administrator Course (SNSA)?

To register for a SonicWall instructor-led training course:

1. Go to SonicWall University and log in to your account. Select the SecureFirst login if you are a SecureFirst partner. If you are not a SecureFirst partner, select the MySonicWall login. If you do not have a MySonicWall account, follow the instructions to create one.
2. Go to the **Events** link and click on **ATP Schedules** to find a class that meets your needs.
3. Click on the Course Name link, which will redirect you to the **Agenda and Details** page for the specific class.
4. If you would like to enroll in this class, click on the **Class Schedule** button.
5. This will take you to the Authorized Training Partner's website.
6. If a local class is not available, go to the **Events** link and click on **Authorized Training Partners** to find a local training partner.
7. The new SonicWall Network Security Administrator e-learning content is available through SonicWall University.
8. To access the content in SonicWall University, the Authorized Training Partner will provide you with activation keys for each course.

To access the SNSA certification exam:

1. Log in to your SonicWall University account.
2. The SNSA Exam page requires an activation key to enable the exam.
3. Enter the key provided by your instructor into the **Enter Course Key** field to activate the exam.
4. If you did not pass the exam, you can purchase an additional attempt test key from the exam page in SonicWall University
5. The **SNSA** exam is a proctored exam. If you take and pass the exam, you will receive a notification within 48 hours with the final status of your exam.
6. Because this is a proctored exam, you will be required to take the exam on a single-monitor computer. Additional resources are not allowed.
